## EXECUTIVE SUMMARY AND STATUS OF THE LCPA GROUNDWATER MONITORING PROGRAM

This annual report was developed to meet the requirements of United States Environmental Protection Agency (USEPA) 40 CFR Part 257 "Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals From Electric Utilities; Final Rule" (the CCR Rule). The CCR Rule requires owners or operators of existing CCR units to produce an Annual Groundwater Monitoring and Corrective Action Report (Annual Report) each year (§ 257.90(e)). Ameren Missouri (Ameren) has determined that the LCPA Coal Combustion Residuals (CCR) Surface Impoundment at the Labadie Energy Center (LEC or Site) is subject to the requirements of the CCR Rule. This Annual Report for the LCPA describes CCR Rule groundwater monitoring activities from January 1, 2023, through December 31, 2023 including verification results related to late 2022 sampling.

Throughout 2023, the LCPA has been in Corrective Action Monitoring with Detection and Assessment Monitoring continuing concurrently. Semi-annual groundwater sampling associated with Detection Monitoring has been ongoing since Detection Monitoring was initiated on October 17, 2017, as required by the CCR Rule. As a part of Detection Monitoring, statistical evaluations are completed after each sampling event to determine if there are any values at a Statistically Significant Increase (SSI) over background concentrations. SSIs have been determined for each sampling event and a summary of the SSIs for the past year is provided in **Table 1**.

The Assessment Monitoring program was established at the LCPA on April 15, 2018. Since that time, groundwater sampling and statistical evaluations have been completed semi-annually to determine if there are any values at a Statistically Significant Level (SSL) over the site-specific Groundwater Protection Standard (GWPS). On October 11, 2018, it was determined that molybdenum was present at an SSL. A summary of SSLs for the past year is provided in **Table 1**.

**Table 1 - Summary of 2023 LCPA Sampling Events, Previous Year Verification, and Statistical Evaluations for Detection and Assessment Monitoring Well Network**

| Event Name                   | Type of Event and Sampling Dates                        | Laboratory Analytical Data Receipt | Parameters Collected   | Verified SSIs  | SSLs  | SSI & SSL Determination Date |
|------------------------------|---|------------------------------------|--|--|---|------------------------------|
| October 2022 Sampling Event  | Detection & Assessment Monitoring, October 25-28, 2022  | November 22, 2022                  | Appendix III, Detected Appendix IV (See Note 1), & Major Cations and Anions    | <u>pH</u> : UMW-3D(R), UMW-4D, UMW-5D, UMW-6D<br><u>Boron</u> : UMW-1D, UMW-2D, UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, UMW-7D, UMW-8D<br><u>Chloride</u> : UMW-2D, UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, UMW-9D<br><u>Fluoride</u> : UMW-8D<br><u>Sulfate</u> : UMW-2D, UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, UMW-7D<br><u>TDS</u> : UMW-1D, UMW-2D, UMW-3D(R), UMW-6D | <u>Molybdenum</u> : UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, UMW-7D | February 20, 2023            |
|                              | Verification Sampling, January 4-5, 2023                | January 20, 2023                   | Detected Appendix III parameters (See Note 2)                                  |  |   |                              |
| May 2023 Sampling Event      | Detection & Assessment Monitoring, May 11-23, 2023      | June 24, 2023                      | Appendix III, Appendix IV, Major Cations and Anions, & selected MNA parameters | <u>pH</u> : UMW-3D(R), UMW-4D, UMW-5D, UMW-6D<br><u>Boron</u> : UMW-1D, UMW-2D, UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, UMW-7D, UMW-8D<br><u>Chloride</u> : UMW-2D, UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, UMW-9D<br><u>Sulfate</u> : UMW-2D, UMW-3D(R), UMW-4D, UMW-5D, UMW-6D<br><u>TDS</u> : UMW-1D, UMW-2D, UMW-3D(R), UMW-5D, UMW-6D                             | <u>Molybdenum</u> : UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, UMW-7D | September 22, 2023           |
|                              | Verification Sampling, July 13-14, 2023                 | August 10, 2023                    | Detected Appendix III parameters (See Note 2)                                  |  |   |                              |
| November 2023 Sampling Event | Detection & Assessment Monitoring, November 16-20, 2023 | January 25, 2024                   | Appendix III, Appendix IV, & Major Cations and Anions                          | To be determined after statistical analysis and Verification Sampling are completed in 2024.   |   |                              |

## Notes:

- 1) Testing was completed for Appendix IV analytes that were detected above the PQL during the April 2022 sampling event.
- 2) Only analytes/wells that were detected above the prediction limit and that had not already been verified were tested during Verification Sampling.
- 3) SSI – Statistically Significant Increase.
- 4) SSL – Statistically Significant Limit.
- 5) TDS – Total Dissolved Solids.
- 6) MNA – Monitored Natural Attenuation.

On January 9, 2019, Ameren initiated its Corrective Measures Assessment (CMA) and posted the CMA report on May 20, 2019. A public meeting was held on May 29, 2019, and responses to public comments are posted on Ameren's CCR website. On August 30, 2019, Ameren published its "Remedy Selection Report – 40 CFR § 257.97 Rush Island, Labadie, Sioux and Meramec CCR Basins" (Remedy Selection Report) that identified source control through installation of a low permeability cover system, use of Monitored Natural Attenuation (MNA), and installation of Supplemental Corrective Measures as its chosen corrective action remedial plan. The Remedy Selection Report's remedial plan consists of two phases as follows:

- 1) Source control, stabilization and containment of CCR by installation of a low permeability geomembrane cap (a minimum  $1 \times 10^{-7}$  centimeters per second (cm/sec) versus  $1 \times 10^{-5}$  cm/sec required by the CCR Rule).
- 2) Once source control is achieved, monitor the natural attenuation of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modelling evaluations will document that concentrations are decreasing as modelled. MNA occurs due to naturally occurring processes within the aquifer.

Ameren commenced Phase 1 of the corrective action remedial plan in September 2019 by initiating closure at the LCRA. Substantial closure of the LCRA was completed in 2020, with the geomembrane cover system completed on December 30, 2020. Additional aspects of closure were completed in spring 2021 and the unit is closed. Closure of the LCRA triggered the transition of the LCRA into the post-closure care requirements of the CCR Rule. As outlined in §257.104 (Post-closure Care Requirements) of the CCR Rule, the monitoring system and programs must be maintained for at least 30 years. After 30 years, if the unit is in Detection Monitoring, the unit may cease groundwater sampling activities, otherwise post-closure care must continue until the unit can return to Detection Monitoring in accordance with §257.95 (Assessment Monitoring Program).

Sampling for Phase 2 of the corrective measures remedial plan as outlined in the Remedy Selection Report began with the February/April 2021 Corrective Action Sampling Event on February 18, 2021. Since that time, groundwater sampling and statistical evaluations have been completed semi-annually to determine if any constituents within the Corrective Action Monitoring Well Network are statistically in exceedance of the GWPS. A summary of Corrective Action Monitoring activities and associated statistical results for this year is provided in **Table 2**.

**Table 2 – Summary of 2023 LCRA Sampling Events and Statistical Evaluations for Corrective Action Monitoring Well Network**

| Event Name                  | Type of Event and Sampling Dates                         | Laboratory Analytical Data Receipt Date | Parameters Collected  | Constituents Statistically Exceeding the GWPS as a Part of Corrective Action Statistical Evaluations   | Date Exceedance of GWPS was determined | ASD Completion Date                  |
|-----------------------------|--|---|---|--|--|--------------------------------------|
| October 2022 Sampling Event | Phase 2 – Corrective Action Sampling October 24-28, 2022 | November 22, 2022                       | Appendix III, Detected Appendix IV (See Note 1), & Major Cations and Anions | <u><b>Arsenic:</b></u><br>LMW-2S<br><u><b>Cobalt:</b></u><br>AM-1S<br><u><b>Lithium:</b></u><br>LMW-7S<br><u><b>Molybdenum:</b></u><br>LMW-2S, LMW-4S, LMW-8S, AM-1D, TP-2D, TP-3D, TP-3M, AMW-8, MW-33(D), MW-34(D), MW-35(D)<br><u><b>Radium 226 + 228:</b></u><br>TP-1D | February 20, 2023                      | May 19, 2023 <sup>(See Note 2)</sup> |

| Event Name                   | Type of Event and Sampling Dates                          | Laboratory Analytical Data Receipt Date | Parameters Collected   | Constituents Statistically Exceeding the GWPS as a Part of Corrective Action Statistical Evaluations   | Date Exceedance of GWPS was determined | ASD Completion Date                       |
|------------------------------|---|---|--|--|--|---|
| May 2023 Sampling Event      | Phase 2 – Corrective Action Sampling May 11-25, 2023      | June 26, 2023                           | Appendix III, Appendix IV, Major Cations and Anions, & selected MNA parameters | <u>Arsenic:</u><br>LMW-2S<br><u>Cobalt:</u><br>AM-1S<br><u>Lithium:</u><br>LMW-7S<br><u>Molybdenum:</u><br>LMW-2S, LMW-4S, LMW-8S, AM-1D, TP-2D, TP-3D, TP-3M, AMW-8, MW-33(D), MW-34(D), MW-35(D) | September 22, 2023                     | December 21, 2023 <sup>(See Note 3)</sup> |
| November 2023 Sampling Event | Phase 2 – Corrective Action Sampling November 15-20, 2023 | January 25, 2024                        | Appendix III, Appendix IV, & Major Cations and Anions                          | Statistical analyses to evaluate statistical exceedances of the GWPS were not completed in 2023. Results of the statistical evaluation will be included in the 2024 Annual Report                  |  |   |

## Notes:

- 1) Testing was completed for Appendix IV analytes that were detected above the PQL during the April 2022 sampling event.
- 2) Cobalt, lithium, and radium 226 + 228 have not historically been identified as SSLs in Assessment Monitoring. An Alternative Source Demonstration (ASD) was prepared for these constituents at AM-1S (cobalt), LMW-7S (lithium), and TP-1D (radium 226 + 228).
- 3) Cobalt and lithium have not been historically identified as SSLs in Assessment Monitoring. An ASD was prepared for these constituents at AM-1S (cobalt) and LMW-7S (lithium).

While there are exceedances of the GWPS using corrective action statistical analysis methods for arsenic, cobalt, lithium, molybdenum, and radium 226 + 228 (Radium in October 2022 sampling event only), variability in the initial groundwater sampling results after closure of the LCPA is expected, especially at wells in close proximity to the LCPA CCR Unit (e.g. LMW-2S). These preliminary results are expected to show decreases in concentration over time after stabilization occurs due to closure and corrective measure remedial activities. Alternative Source Demonstrations (ASDs) were completed for the cobalt, lithium, and radium 226+228 exceedances, demonstrating that these exceedances are not a result of impacts from the LCPA, but instead are the result of natural geochemical variability of groundwater within the alluvial aquifer at the site. Molybdenum and arsenic remain as exceedances within the LCPA Corrective Action Network; therefore, the unit remains in Corrective Action monitoring.

### Supplemental Corrective Measures

In addition to MNA as a Corrective Action Remedy at Labadie, Ameren is currently preparing for installation of a groundwater treatment system similar to the system at the Rush Island Energy Center (RIEC). Ameren received an Underground Injection Control State Operating Permit (UI – 0000045). Due to the success of the treatment systems at the Rush Island Energy Center and the Sioux Energy Center, Ameren is currently expanding use of this technology to the downgradient side (northern side) of the LCPA, to supplement MNA at the site. Drilling of the injection and extraction wells associated with the treatment system is planned to be completed in 2024-2025, and the system is expected to be fully operational in 2025.

Overall, Corrective Actions taken by Ameren, including closure of the LCPA with an engineered geomembrane cover system and MNA, has reduced concentrations of key CCR constituents. In monitoring wells downgradient of the LCPA that currently have an exceedance for molybdenum in either the Assessment Monitoring or Corrective Action monitoring networks, average boron concentrations have decreased approximately 15% and average molybdenum concentrations have decreased approximately 9% since 2019 (the last year CCR Unit received CCR waste). After installation of the treatment system, it is expected that the additional remediation system will aid in reducing the concentrations of constituents of concern at the LCPA in coming years. Monitoring and further evaluation of monitoring results will continue, and progress will be tracked in future Annual Reports and statistical evaluations.

# Table of Contents

|     |  |   |
|-----|--|---|
| 1.0 | Installation or Decommissioning of Monitoring Wells..... | 1 |
| 2.0 | Groundwater Sampling Results and Discussion.....         | 1 |

**Appendix E** - May 2023 Corrective Action Statistical Evaluation

**Appendix F** - Alternative Source Demonstration – October 2022 Sampling Event

**Appendix G** - Alternative Source Demonstration – May 2023 Sampling Event

**Appendix H** - 2023 Potentiometric Surface Maps

## 1.0 INSTALLATION OR DECOMMISSIONING OF MONITORING WELLS

There are currently two different networks used for monitoring the LCPA. These include the monitoring well network established under §257.91 for Detection and Assessment Monitoring and the network established under §257.98 for Corrective Action Monitoring, as displayed in **Figure 1**. No new wells were installed or decommissioned in 2023. A summary of the well construction details for monitoring wells in both networks is provided in **Table 3**. Further details, including well construction diagrams for these wells, are provided in previous annual reports for the LCPA.

## 2.0 GROUNDWATER SAMPLING RESULTS AND DISCUSSION

The following sections discuss the sampling events completed for the LCPA CCR Unit in 2023. **Tables 4** and **5** provide a summary of the groundwater samples collected in 2023 including the number of samples, the date of the sample collection, and the monitoring program for which the samples were collected. **Appendix A** provides laboratory analytical data for CCR Rule sampling events conducted in 2023.

### 2.1 Detection Monitoring Program

A Detection Monitoring sampling event was completed October 25-28, 2022. Verification sampling and the statistical analysis to evaluate for SSIs for the October 2022 event were not completed until 2023 and are therefore included in this report. New initial exceedances of Appendix III analytes triggered a verification sampling event, which was completed January 4-5, 2023, and verified SSIs. **Table 6** summarizes the results and the statistical analysis of the October 2022 Detection Monitoring event. Laboratory analytical data for the October 2022 Detection Monitoring event are provided in the 2022 Groundwater Monitoring and Corrective Action Annual Report for the LCPA.

Detection Monitoring samples were collected May 11-23, 2023, and testing was completed for all Appendix III analytes, as well as major cations and anions. As outlined in the Statistical Analysis Plan for the Site, updates to the statistical limits should be completed once four to eight new sample results are available. During the statistical analysis of the May 2023 sampling event, the statistical limits used to determine an SSI were updated according to the Statistical Analysis Plan. New initial exceedances of Appendix III analytes triggered a verification sampling event, which was completed July 13-14, 2023, and verified one SSI. **Table 7** summarizes the results and the statistical analyses of the May 2023 Detection Monitoring event.

A Detection Monitoring sampling event was completed November 16-20, 2023, and testing was completed for all Appendix III analytes, as well as major cations and anions. The statistical analysis to evaluate for SSIs in the November 2023 data was not completed in 2023 and will be included in the 2024 Annual Report. **Table 8** summarizes the results of the November 2023 Detection Monitoring event.

### 2.2 Assessment Monitoring Program

An Assessment Monitoring sampling event was completed October 25-28, 2022, and testing was completed for Appendix IV analytes that were detected above the Practical Quantitation Limit (PQL) during the previous sampling event from either the Assessment or Corrective Action Groundwater Monitoring Well Networks, as well as major cations and anions. **Table 9** summarizes the results of the October 2022 Assessment Monitoring event. Laboratory analytical data for this event are provided in the 2022 Annual Report. The statistical evaluation for this event was completed in 2023 and is included in this report. The results from this analysis and a table that displays the site-specific GWPS for each Appendix IV constituent are provided in **Appendix B**. The SSLs for the LCPA continue to be:

- Molybdenum at UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, and UMW-7D

An Assessment Monitoring sampling event was completed May 11-23, 2023. Testing was completed for all Appendix IV analytes, major cations and anions, and other selected MNA parameters. During the statistical

analysis of the April 2023 sampling event, the site-specific GWPSs used to determine SSLs were updated in accordance with the Statistical Analysis Plan. **Table 10** summarizes the results of the May 2023 Assessment Monitoring event. The statistical evaluation for this event was completed in 2023 and is included in this report. The statistical evaluation for this event and a table that displays the site-specific GWPSs are provided in **Appendix C** and determined that there were no new SSLs.

An Assessment Monitoring sampling event was completed November 16-20, 2023. Testing was completed for all Appendix IV analytes as well as major cations and anions. **Table 11** summarizes the results of the May 2023 Assessment Monitoring event; however, the statistical analysis to evaluate SSLs were not completed in 2023. Results of the statistical evaluation will be included in the 2024 Annual Report.

## 2.3 Corrective Action Monitoring Program

A Corrective Action sampling event was completed October 24-28, 2022. Testing was completed for all Appendix III analytes, Appendix IV analytes that were detected above the PQL during the previous sampling event from either the Assessment or Corrective Action Groundwater Monitoring Well Networks, and major cations and anions. A summary of the October 2022 Corrective Action sampling event results is provided in **Table 12** and the results of the statistical evaluation for this event are provided in **Appendix D**. Cobalt at AM-1S is a new exceedance and lithium at LMW-7S returns as an exceedance based on additional data from the October 2022 sampling event. The remaining exceedances are the same as those reported for the April 2022 sampling event. A summary of constituents displaying statistical exceedances of the GWPS using Corrective Action statistical methods<sup>1</sup> as of the October 2022 sampling event is as follows:

- Arsenic at LMW-2S.
- Cobalt at AM-1S.
- Lithium at LMW-7S.
- Molybdenum at LMW-2S, LMW-4S, LMW-8S, AM-1D, TP-2D, TP-3D, TP-3M, AMW-8, MW-33(D), MW-34(D), and MW-35(D).
- Radium 226 + 228 at TP-1D.

A Corrective Action sampling event was completed May 11-25, 2023. Testing was completed for all Appendix III and IV analytes, major cations and anions, and other selected MNA parameters. A summary of the May 2023 Corrective Action sampling event results is provided in **Table 13**. The results from the statistical evaluation are provided in **Appendix E**. Based on this analysis, radium 226 + 228 is no longer an exceedance of the GWPS at any well in the Corrective Action well network. The other exceedances remained the same for this event as those reported for the October 2022 event.

As stated in the Corrective Action GMP, if the statistical evaluation determines that a constituent exceeds the GWPS that was not identified as an SSL in Assessment Monitoring, the data should be evaluated to determine the source of the exceedance. Cobalt, lithium, and radium 226 + 228 have not historically been identified as SSLs in Assessment Monitoring, and a review of the data determined that the statistical exceedances at monitoring wells AM-1S (cobalt), and LMW-7S (lithium), and TP-1D (radium 226 + 228) are not caused by the LCPA CCR Unit. Therefore, Alternative Source Demonstrations (ASDs) were completed following the October 2022 and May 2023 sampling events and are provided in **Appendices F and G**. These ASDs conclude the statistical exceedances for lithium, cobalt, and radium 226 + 228 (only applicable for October 2022) are not a result of impacts from the LCPA but appear to result from natural geochemical variability within the alluvial aquifer.

<sup>1</sup> The statistical testing method used to evaluate the Corrective Action monitoring results is the confidence interval method, which is the same method used during Assessment Monitoring, except the null hypothesis for the confidence intervals is reversed. For Corrective Action, the Unified Guidance states that the appropriate null hypothesis is that the groundwater population (mean) exceeds the Groundwater Protection Standard (GWPS) for those constituents that exceed the GWPS under Assessment Monitoring program. Therefore, in Corrective Action the Upper Confidence Limit (UCL) is compared to the GWPS instead of the Lower Confidence Limit (LCL) [as used during Assessment Monitoring].

While there are exceedances of the GWPS using corrective action statistical analysis methods for arsenic and molybdenum, variability in the initial groundwater sampling results during and directly after closure of the LCPA is expected, especially at wells in close proximity to the LCPA CCR Unit (e.g., LMW-2S). The concentrations reported in these preliminary results are expected to decrease over time as a result of the closure activities, as stabilization occurs, and groundwater treatment corrective measures are put into service.

A Corrective Action sampling event was completed on November 15-20, 2023. Testing was completed for all Appendix III and IV analytes in addition to major cations and anions. **Table 14** summarizes the results of the November 2023 Corrective Action event; however, the evaluation for statistical exceedances of the GWPS was not completed in 2023. Results of this statistical evaluation will be included in the 2024 Annual Report.

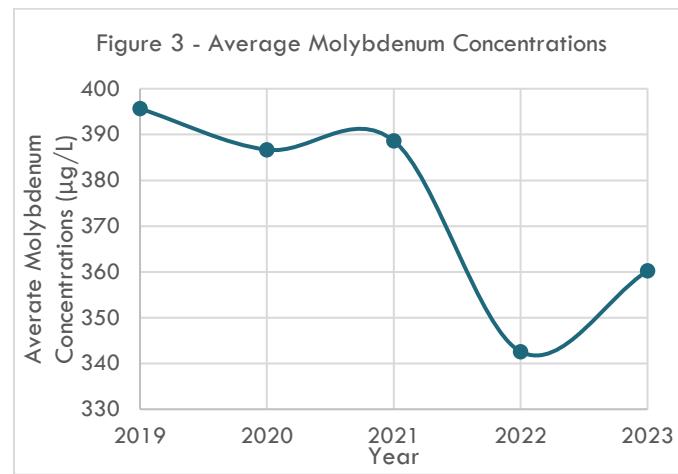

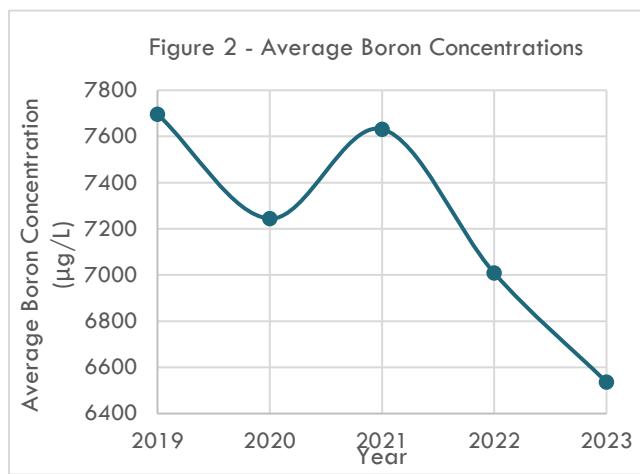

## 2.4 Evaluation of Corrective Measures

As discussed above, Ameren obtained an Underground Injection Control Missouri State Operating Permit (UI – 0000045) in 2022. Due to the success of the treatment systems at the Rush Island and Sioux Energy Centers, Ameren plans to implement an additional corrective measure (a pump, treat, and re-inject groundwater treatment system) at the downgradient side of the LCPA, to supplement the MNA at the site. The groundwater treatment system is expected to be fully operational in 2025.

Ameren commenced Phase 1 of the corrective action remedial plan in September 2019 by initiating closure of the LCPA, which was completed on December 30, 2020. The November 2023 groundwater sampling event represents the sixth groundwater sampling event since closure of the LCPA was completed.

In order to document the effectiveness of the Corrective Action Remedies (Corrective Measures), a site-wide evaluation of the key site CCR Indicators was completed. **Figures 2 and 3**, below, display the average concentrations for boron and molybdenum in the monitoring wells that currently contain a statistical exceedance for molybdenum in either the Assessment Monitoring or Corrective Action Monitoring Networks for the LCPA. While there is variability in individual well results, the average annual concentrations at the site are decreasing for boron and molybdenum concentrations as follows:

- **Boron** - Average concentrations in these monitoring wells downgradient of the LCPA have decreased approximately 15% since 2019.
- **Molybdenum** - Average concentrations in these monitoring wells downgradient of the LCPA have decreased approximately 9% since 2019.

As displayed by these figures, corrective measures taken by Ameren including the closure of the LCPA with an engineered geomembrane system and MNA have been effective at reducing concentrations of key CCR constituents. The future implementation of the groundwater treatment system discussed previously is expected to supplement these reductions. Groundwater monitoring and evaluation of monitoring results will continue, and progress will be tracked in future Annual Reports and statistical evaluations.

## 2.5 Groundwater Elevation, Flow Rate and Direction

To meet the requirements of §257.93(c), water level measurements were taken at all monitoring wells prior to the start of groundwater purging and sampling. Static water levels were measured within a 24-hour period in each monitoring well using an electronic water level indicator.

Groundwater elevations were used to generate potentiometric surface maps included in **Appendix H**. As shown on the potentiometric surface maps, groundwater flow direction within the uppermost aquifer is dynamic and influenced by seasonal changes in the water level in the adjacent Missouri River. Water flows into and out of the alluvial aquifer because of fluctuating river water levels that produce “bank recharge” and “bank discharge” conditions. Overall, based on the potentiometric surface maps, a general flow direction from the south/southwest (bluffs area) to the north/northeast (Missouri River) is observed under normal river conditions. However, during periods of high river levels, groundwater flow can temporarily reverse. During these times of high river stage and temporary flow direction changes, horizontal groundwater gradients generally decrease, and little net movement of groundwater occurs. Based on quarterly water level measurements collected in 2023, groundwater across the LEC exhibited typical flow towards the Missouri River throughout the year.

Groundwater flow direction and hydraulic gradient were estimated for the alluvial aquifer wells at the LEC using commercially available software. Results from this assessment indicate that, while groundwater flow direction is variable, the overall net groundwater flow in the alluvial aquifer at the LEC is from the bluffs toward the river. Horizontal gradients calculated by the program range from 0.0001 to 0.0007 feet/foot with an estimated net annual groundwater movement of approximately 18 feet per year in the prevailing downgradient direction.

## 2.6 Sampling Issues

No notable sampling issues were encountered at the LCPA in 2023.

## 3.0 ACTIVITIES PLANNED FOR 2024

Detection and Assessment Monitoring are scheduled to continue on a semi-annual basis in the second and fourth quarters of 2024. Statistical analysis of the November 2023 Detection and Assessment Monitoring data will be completed in 2024 and will be included in the 2024 Annual Report.

As part of the Phase 2 of the Remedy Selection Report’s corrective measures remedial plan, Corrective Action sampling is scheduled to continue on a semi-annual basis in the second and fourth quarters of 2024. Statistical analysis of the November 2023 Corrective Action Monitoring data will be completed in 2024 and will be included in the 2024 Annual Report. Monitoring and statistical evaluation of MNA will be completed in accordance with the corrective measures remedial plan discussed in the Remedy Selection Report.

Drilling of the injection and extraction wells associated with the treatment system is planned to be completed in 2024-2025, and the system is expected to be operational in 2025. Evaluation of the effectiveness of Corrective Action and Corrective Measures on CCR constituent concentrations in groundwater will continue in 2024 and be included in the 2024 Annual Report.

## Tables

**Table 3**  
**Summary of Well Construction Details**

NOTES:

1. Unit Abbreviations: µg/L - micrograms per liter, mg/L - milligrams per liter, SU - standard units.
2. J - Result is an estimated value.
3. NA - Not applicable.
4. ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.
5. Prediction Limits calculated using Sanitas Software.
6. Values highlighted in yellow indicate a Statistically Significant Increase (SSI).
7. Values highlighted in green indicate an initial exceedance above the prediction limit that was not confirmed by Verification Sampling (not an SSI).
8. Only analytes/wells that were detected above the prediction limit and that had not already been verified were tested during Verification Sampling.
9. If all background values are less than the Practical Quantitation Limit (PQL) then the Double Quantification Rule (DQR) is used.

7. Values highlighted in green indicate an initial exceedance above the prediction limit that was not confirmed by Verification Sampling (not an SSI).
8. Only analytes/wells that were detected above the prediction limit and that had not already been verified were tested during Verification Sampling.
9. If all background values are less than the Practical Quantitation Limit (PQL) then the Double Quantification Rule (DQR) is used.

NOTES:

1. Unit Abbreviations: µg/L - micrograms per liter, mg/L - milligrams per liter, SU - standard units.
2. J - Result is an estimated value.
3. NA - Not applicable.
4. ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.

**NOTES**

1. Unit Abbreviations: µg/L - micrograms per liter, mg/L - milligrams per liter, SU - standard units, pCi/L - picocuries per liter, mV - millivolts, mS/cm - millisiemens per centimeter, and NTU - nephelometric turbidity units.
2. J - Result is an estimated value.
3. NA - Not Applicable.
4. ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.
5. Radium [226 + 228] is reported as the sum of the Radium 226 and the Radium 228 activity concentrations unless the sum of the Radium 226 and Radium 228 Minimum Detectable Concentrations (MDC) is higher in which case it is displayed as ND.

#### NOTES

- Unit Abbreviations: µg/L - micrograms per liter, mg/L - milligrams per liter, SU - standard units, pCi/L - picocuries per liter, mV - millivolts, mS/cm - millisiemens per centimeter, and NTU - nephelometric turbidity units.
- J - Result is an estimated value.
- NA - Not Applicable.
- ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.
- Radium [226 + 228] is reported as the sum of the Radium 226 and the Radium 228 activity concentrations unless the sum of the Radium 226 and Radium 228 Minimum Detectable Concentrations (MDC) is higher in which case it is displayed as ND.

NOTES

- Unit Abbreviations: µg/L - micrograms per liter, mg/L - milligrams per liter, SU - standard units, pCi/L - picocuries per liter, mV - millivolts, mS/cm - millisiemens per centimeter, and NTU - nephelometric turbidity units.
- J - Result is an estimated value.
- ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.
- Radium [226 + 228] is reported as the sum of the Radium 226 and the Radium 228 activity concentrations unless the sum of the Radium 226 and Radium 228 Minimum Detectable Concentrations (MDC) is higher in which case it is displayed as ND.
- NA - Not Applicable.

### Laboratory Analytical Data

January 24, 2023

Jeffrey Ingram  
WSP Golder  
701 Emerson Road  
Suite 250  
Saint Louis, MO 63141

RE: Project: AMEREN LEC LCPA  
Pace Project No.: 60419333

Dear Jeffrey Ingram:

Enclosed are the analytical results for sample(s) received by the laboratory on January 06, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

REV-1, 1/24/23: Sample collection dates updated for L-UMW-3D and L-LCPA-FB-1.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: AMEREN LEC LCPA

Pace Project No.: 60419333

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

M1      Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

### **DATA VALIDATION SUMMARY, LABADIE ENERGY CENTER – LCPA – VERIFICATION SAMPLING - DATA PACKAGE 60419333REV1**

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a compound was detected in a sample result between the MDL and the PQL the results were recorded at the detection value and qualified as estimates (J).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: WSP USA Inc.  
 Project Name: Ameren LEC - LCPA VS  
 Reviewer: R.Pommerenke

Project Manager: J. Ingram  
 Project Number: 153140604.0001  
 Validation Date: 1/25/2023

Laboratory: Pace Analytical Services SDG #: 60419333rev1

Analytical Method (type and no.): EPA 200.7 (Total Metals); SM2540C (TDS); EPA 300.0 (Anions)

Matrix:  Air  Soil/Sed.  Water  Waste

Sample Names L-UMW-8D, L-LCPA-DUP-1, L-UMW-3D, L-LCPA-FB-1

**NOTE:** Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

| Field Information  | YES                                 | NO                                  | NA                                  | COMMENTS                         |

### Comments/Notes:

---

Sample collection dates updated for L-UMW-3D and L-LCPA-FB-1 from 1/4/2023 to 1/5/2023.

---

Blanks:

---

L-LCPA-FB-1 @ L-UMW-3: Calcium (59.9J). Associated with L-UMW-3. Results > 10 x blank and > RL: no qualification necessary.

---

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

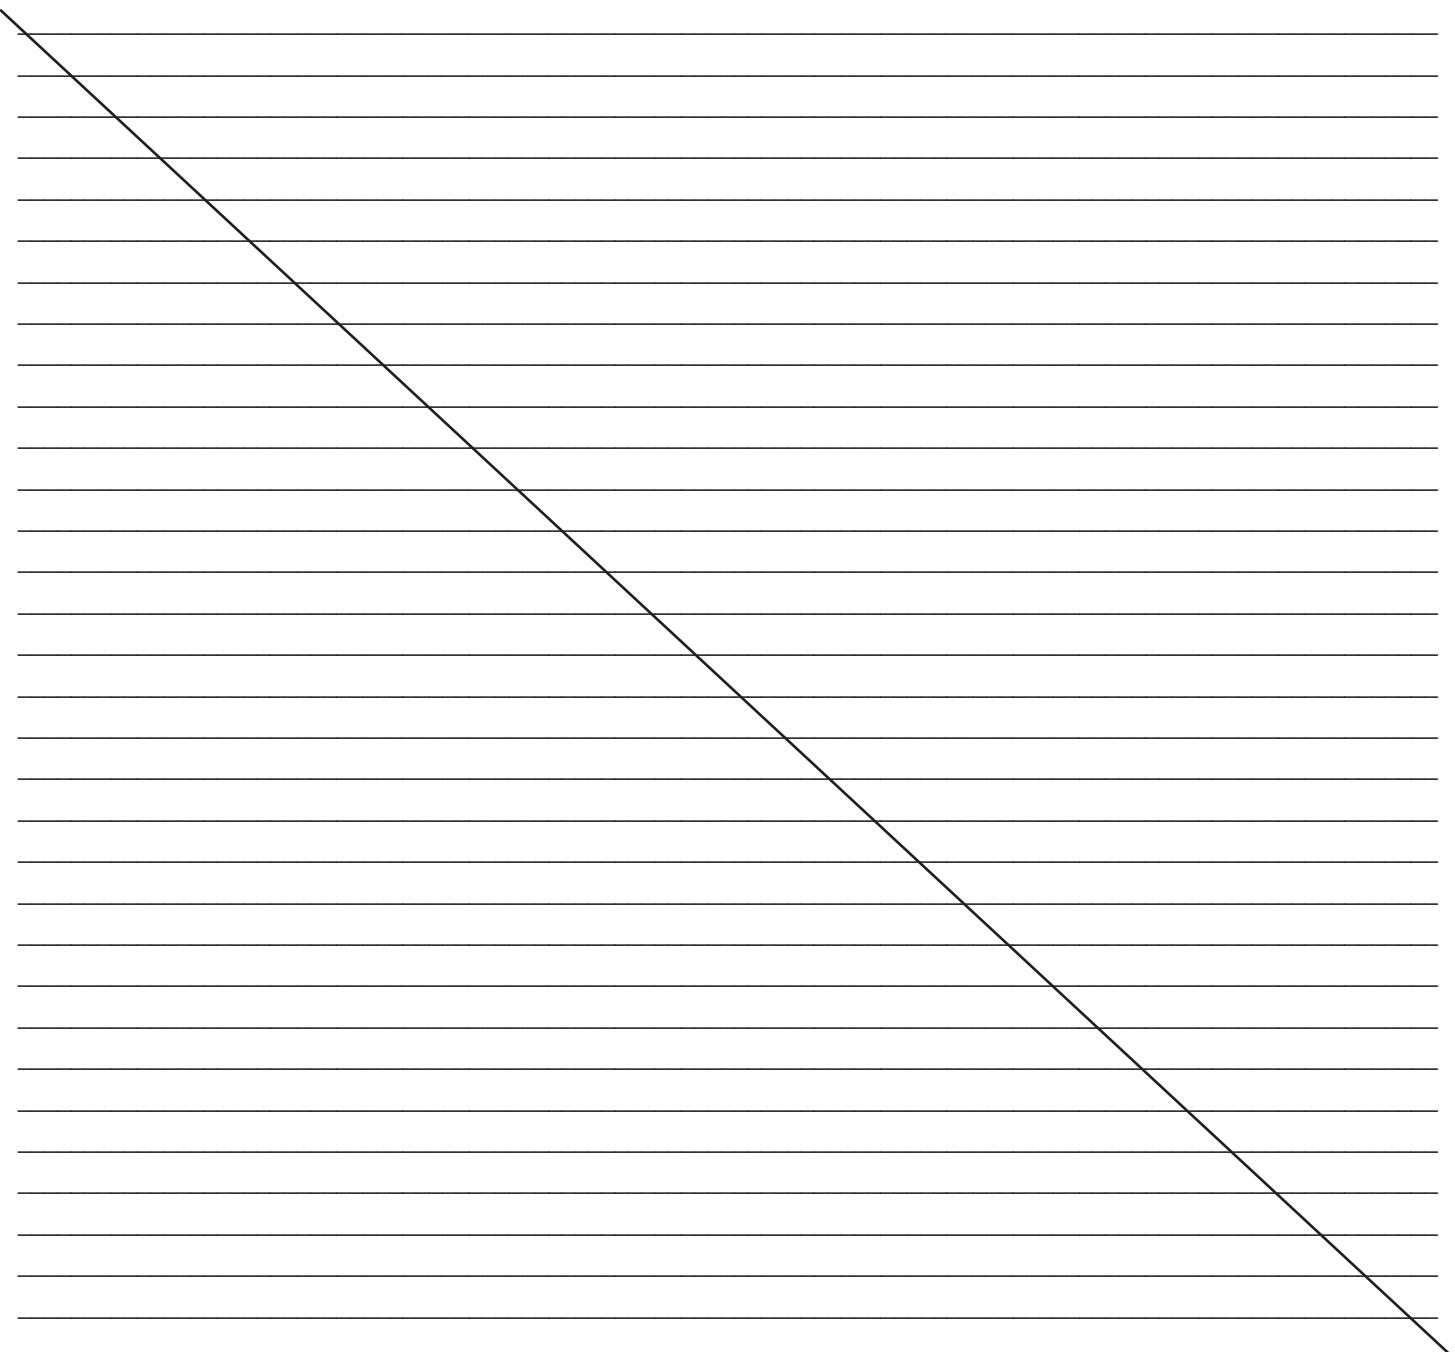

**Comments/Notes:****Duplicates:**

L-LCPA-DUP-1 @ L-UMW-8D: RPD for calcium (130.2%) and Total Dissolved Solids (92.4%) exceeded max RPD (20%).  
Fluoride detected in parent sample and ND in duplicate.

**MS/MSD:**

3282769/3282770: MS % recovery low for Calcium. Performed on unrelated sample: no qualification necessary.

3282775/3282776: MS % recovery low for Calcium. Associated with L-UMW-3D. Only one QC indicator out of control limits:  
no qualification necessary.

The form consists of a grid of approximately 20 horizontal lines for notes. A single, thick, solid black diagonal line starts from the top-left corner and extends towards the bottom-right corner, effectively crossing out the entire grid area.

RE: Project: AMEREN LCPA  
Pace Project No.: 60428744

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory between May 13, 2023 and May 24, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City
- Pace Analytical Services - Greensburg

REV-1, 6/26/23: Report revised to correct prep date entry error for COD. Samples were not analyzed out of hold.

REV-2, 1/30/24: Parameters not required under the CCR rule removed.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALITY CONTROL - RADIOCHEMISTRY

Project: AMEREN LCPA

Pace Project No.: 60428744

QC Batch: 592562

Analysis Method: EPA 904.0

QC Batch Method: EPA 904.0

Analysis Description: 904.0 Radium 228

Laboratory: Pace Analytical Services - Greensburg

Associated Lab Samples: 60428744010, 60428744011, 60428744012, 60428744013, 60428744014

METHOD BLANK: 2879294

Matrix: Water

Associated Lab Samples: 60428744010, 60428744011, 60428744012, 60428744013, 60428744014

| Parameter  | Act ± Unc (MDC) Carr Trac         | Units | Analyzed       | Qualifiers |
|------------|-----------------------------------|-------|----------------|------------|
| Radium-228 | 0.225 ± 0.350 (0.757) C:82% T:80% | pCi/L | 06/14/23 12:26 |            |

Results presented on this page are in the units indicated by the "Units" column except where an alternate unit is presented to the right of the result.

## QUALIFIERS

Project: AMEREN LCPA

Pace Project No.: 60428744

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- 1e Ferrous Iron result is greater than the total iron. Data is within laboratory control limits.
- B Analyte was detected in the associated method blank.
- D6 The precision between the sample and sample duplicate exceeded laboratory control limits.
- E Analyte concentration exceeded the calibration range. The reported result is estimated.
- H6 Analysis initiated outside of the 15 minute EPA required holding time.
- L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

**RE: Data Validation Summary, Labadie Energy Center – LCPA – Data Package 60428744**

---

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was analyzed outside of hold time, the sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a compound was detected in a blank (i.e. method, field), and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
- When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).
- When a duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a laboratory control sample criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a matrix spike/matrix spike duplicate (MS/MSD) criterion was not met, the associated sample result was qualified as an estimate (J, J+ for estimates based high, and J- for estimates based low).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Rocksmith Geoengineering  
 Project Name: Ameren LCPA  
 Reviewer: G. Morey

Project Manager: J. Ingram  
 Project Number: 23007  
 Validation Date: 1/30/2024

Laboratory: Pace Analytical

SDG #: 60428744

Analytical Method (type and no.): EPA 200.7/200.8/7470 (Total Metals); SM 2320B (Alkalinity); SM 2540C (TDS); EPA 300.0 (Anions);

Matrix:  Air  Soil/Sed.  Water  Waste  SM 3500-FE (Ferric Iron); SM 4500-S-2 (Sulfide); EPA 903.1/904.0 (Radium 226+228)

Sample Names L-UMW-2D, L-UMW-7D, L-UMW-8D, L-UMW-9D, L-BMW-1D, L-BMW-2D, L-UMW-DUP-1, L-UMW-MS-1, L-UMW-MSD-1, L-UMW-4D, L-UMW-5D, L-UMW-6D, L-UMW-DUP-2, L-UMW-FB-1, L-UMW-1D, L-UMW-3D, UMW-FB-2

**NOTE:** Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

| Field Information  | YES                                 | NO                                  | NA                                  | COMMENTS                                  |

**Comments/Notes:**

General:

Ferrous iron samples were all analyzed outside of hold time. Results qualified as estimates.

Chloride and/or sulfate were diluted in several samples; no qualification necessary.

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

### Comments/Notes:

#### Method Blanks:

3357531: barium (0.75J), calcium (28.4J), iron (16.0J), manganese (1.9J). Associated with samples -001 through -007.

Results > RL and 10x blank, no qualification necessary.

3364751: calcium (71.0J) and iron (16.0J). Associated with samples -015 through -017. Calcium result at -017 < RL, qualified as non-detect at RL.

3374470: barium (0.85J), beryllium (0.17J), calcium (46.0J), iron (19.9J), manganese (0.53J). Associated with samples -010 through -014. Iron results at -011 and -014 < RL, qualified as non-detect at RL.

3374475: arsenic (0.14J), cadmium (0.15J), chromium (0.74J). Associated with samples -010 through -014. Several results < RL, qualified as non-detect at RL.

#### Field Blanks:

L-UMW-FB-1 @ L-UMW-4D: iron (14.3J), chromium (0.73J), ferric iron (0.014J). Chromium qualified as non-detect.

UMW-FB-2 @ L-UMW-1D: barium (3.5J), boron (9.5J), calcium (35.9J), chromium (0.34J). No qualification necessary.

#### Laboratory Control Samples:

3366407: LCS recovery low for fluoride, associated with samples -001 through -006. Results qualified as estimates.

#### Duplicates:

L-UMW-DUP-1 @ L-UMW-9D: DUP RPD exceeds limit for chloride (39%), ferrous iron (24%), and TDS (11%).

L-UMW-DUP-2 @ L-UMW-6D: DUP RPD exceeds limit for radium-228 (43%).

Lab duplicate max RPD: 10%: alkalinity, TDS; 15%: chloride, fluoride, sulfate; 20%: ferrous Iron, sulfide

3366410: Lab DUP RPD exceeds limit for chloride, associated with sample -001, result qualified as estimate.

3374554: Lab DUP RPD exceeds limit for fluoride, associated with unrelated sample, no qualification necessary.

#### MS/MSD:

3357533/3357534: MS/MSD recovery low for calcium and sodium. Associated with sample -001, results qualified as estimates.

3357535: MS recovery high for calcium, no MSD. Associated with sample -007, result qualified as estimate.

3364753/3364754: MSD recovery low for calcium and sodium. Associated with unrelated sample, no qualification necessary.

3360172/3360173: MS/MSD recovery low for sulfide. Associated with unrelated sample, no qualification necessary.

3366408/3366409: MS/MSD recoveries low for chloride and fluoride. Associated with sample -001, results qualified as estimates.

3366844/3366845: MSD recovery low for chloride, only 1 QC indicator out of control limitst, no qualification necessary.

3374552/3374553: Analyte concentration exceeded calibration range, associated with unrelated sample, no qualification necessary.

3375539/3375537: MS/MSD recovery low for sulfate. Associated with unrelated sample, no qualification necessary.

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

**Data Qualification:**

| Sample Name | Constituent(s) | Result | Qualifier | Reason                                |
|-------------|----------------|--------|-----------|---------------------------------------|

RE: Project: AMEREN LCPA-CA  
Pace Project No.: 60428743

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory between May 13, 2023 and May 26, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City
- Pace Analytical Services - Greensburg

REV-1, 1/30/24: Parameters not required under the CCR rule removed.

REV-2, 1/31/24: Excluded samples L-BMW-1S, L-BMW-2S, L-LMW-1S, L-LMW-2S, L-LMW-4S, L-LMW-7S, L-LMW-8S, and L-MW-26 added

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: AMEREN LCPA-CA

Pace Project No.: 60428743

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

H1 Analysis conducted outside the EPA method holding time.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Work Order Number:

# Memorandum

## January 31, 2024

**To:** Project File  
Rocksmith Geoengineering, LLC **Project Number:** 23007

**CC:** Mark Haddock, Jeffrey Ingram

**From:** Grant Morey **Email:** Grant.Morey@Rocksmithgeo.com

**RE:** Data Validation Summary, Labadie Energy Center – LCPA-CA – Data Package 60428743

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was analyzed outside of hold time, the sample result was qualified as an estimate (J for detects, UJ for non-detects).
  - When a compound was detected in a blank (i.e. method, field), and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
  - When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).
  - When a duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
  - When a laboratory control sample criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Rocksmith Geoengineering  
 Project Name: Ameren LCPA-CA  
 Reviewer: G. Morey

Project Manager: J. Ingram  
 Project Number: 23007  
 Validation Date: 1/31/2024

Laboratory: Pace Analytical

SDG #: 60428743

Analytical Method (type and no.): EPA 200.7/200.8/7470 (Total Metals); SM 2320B (Alkalinity); SM 2540C (TDS); EPA 300.0 (Anions);

Matrix:  Air  Soil/Sed.  Water  Waste  SM 3500-FE (Ferric Iron); SM 4500-S-2 (Sulfide); EPA 903.1/904.0 (Radium 226+228)

Sample Names L-BMW-1S, L-BMW-2S, L-LMW-1S, L-S-1, L-TP-1D, L-CA-DUP-1, L-MS-1, L-MSD-1, L-MW-35(D), L-MW-24, L-LMW-2S, L-LMW-7S, L-LMW-8S, L-MW-26, L-TP-2M, L-TP-2D, L-AM-1S, L-AM-1D, L-CA-FB-1, L-MS-2, L-MSD-2, L-AMW-8, L-LMW-4S, L-MW-33(D), L-MW-34(D), L-TP-3M, L-TP-3D, L-TP-4D, L-CA-DUP-2, L-CA-DUP-3, L-CA-FB-2, L-CA-FB-3

**NOTE:** Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

| Field Information  | YES                                 | NO                                  | NA                                  | COMMENTS                           |

**Comments/Notes:**

General:

Ferrous iron samples were all analyzed outside of hold time controls. Results qualified as estimates.

Chloride and/or sulfate were diluted in several samples; no qualification necessary.

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

### Comments/Notes:

#### Method Blanks:

3357531: barium (0.75J), calcium (28.4J), iron (16.0J), manganese (1.9J). Associated with samples

-001 through -003. Iron and manganese results at -002 < RL, qualified as non-detect at RL.

3364751: calcium (71.0J), iron (16.0J). Associated with samples -016 through -020. Calcium and iron results at -020 < RL, qualified as non-detects at RL's.

3366629: manganese (0.79J). Associated with samples -023 through -033. No qualification necessary.

3374475: arsenic (0.14J), cadmium (0.15J), chromium (0.74J). Associated with samples -010, -011, -008, -001, -003, -004. Several results < RL or < 10x blank, results qualified as estimates.

3374470: barium (0.85J), beryllium (0.17J), calcium (46.0J), iron (19.9J), manganese (0.53J). Associated with samples -010, -011, -008, -001, -003, -004. Several results < RL or < 10x blank, results qualified as estimates.

#### Field Blanks:

L-CA-FB-1 @ L-AM-1S: calcium (44.5J), boron (10.3J), iron (13.9J), molybdenum (2.3J), ferric iron (0.014J).

L-CA-FB-2 @ L-MW-33(D): boron (13.9J), chromium (0.44J), TDS (6.5), ferric iron (0.0026J).

L-CA-FB-3: boron (10.3J), chromium (0.51J), TDS (9.0), ferric iron (0.0025J).

All field blank-associated results > 10x field blank, no qualification necessary.

#### Laboratory Control Samples:

3366407: fluoride LCS recovery low, associated with samples -001, -002, -003. All results ND, qualified as UJ.

#### Duplicates:

L-CA-DUP-1 @ L-S-1: field DUP RPD exceeds limit for ferric iron (40%), iron (37%), radium-228 (22%), and TDS (10%).

Results qualified as estimates. Beryllium detected in duplicate and not in parent sample, results qualified as estimates.

Chromium detected in parent sample and not in duplicate, results qualified as estimates.

L-CA-DUP-2 @ L-TP-4D: field DUP RPD exceeds control limit for molybdenum (52%), results qualified as estimates.

Fluoride detected in duplicate and not in parent sample, results qualified as estimates. Radium-226, radium-228, and sulfide detected in parent sample and not in duplicate, results qualified as estimates.

L-CA-DUP-3 @ L-TP-3D: field DUP RPD exceeds control limit for ferrous iron (32%), results qualified as estimates.

Fluoride detected in parent sample and not in duplicate, results qualified as estimates.

Lab duplicate max RPD: 10%: alkalinity, TDS; 15%: chloride, fluoride, sulfate; 20%: ferrous iron, sulfide

3367983: lab DUP RPD exceeds control limits for sulfide (51%), associated with unrelated sample, no qualification necessary.

3366410: lab DUP RPD exceeds control limits for chloride (19%), associated with unrelated sample, no qualification necessary.

3374554: lab DUP RPD exceeds control limits for fluoride (16%), associated with sample -019, result qualified as estimate.

#### MS/MSD:

3357533/3357534: MS/MSD recovery low for calcium and sodium, associated with unrelated sample, no qualification necessary.

3357535: MS recovery high for calcium, associated with unrelated sample, no qualification necessary.

3363102/3363103: MS/MSD recovery low for calcium, associated with unrelated sample, no qualification necessary.

3363114/3363115: MS recovery low for calcium, MSD recovery and RPD are OK, no qualification necessary.

3364753/3364754: MSD recoveries low for calcium and sodium, MS recoveries and RPD are OK, no qualification necessary.

3366631/3366632: MS recovery low for calcium, MSD recovery and RPD are OK, no qualification necessary.

3360172/3360173: MS/MSD recovery low for sulfide, associated with unrelated sample, no qualification necessary.

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

RE: Project: AMEREN-VERIFICATION, LCPA  
Pace Project No.: 60433254

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory on July 15, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace National - Mt. Juliet
- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church  
jamie.church@pacelabs.com

## QUALIFIERS

Project: AMEREN-VERIFICATION, LCPA  
Pace Project No.: 60433254

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### SAMPLE QUALIFIERS

Sample: L1637878-01

[1] Wet Chemistry by Method 9020B - Breakthrough due to matrix interference.

Sample: L1638684-01

[1] Wet Chemistry by Method 9020B - Breakthrough due to matrix interference.

Sample: L1640036-01

[1] Wet Chemistry by Method 9020B - Breakthrough due to matrix interference.

### ANALYTE QUALIFIERS

D8 The sample and duplicate results for this parameter are less than 5 times the reporting limit, the RPD may not be statistically valid.

J Analyte detected below the reporting limit, therefore result is an estimate. This qualifier is also used for all TICs.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

# Memorandum

## August 11, 2023

**To:** Project File  
Rocksmith Geoengineering, LLC      **Project Number:** 23007

**CC:** Mark Haddock, Jeffrey Ingram

**From:** Grant Morey      **Email:** Grant.Morey@Rocksmithgeo.com

**RE:** Data Validation Summary, Labadie Energy Center – LCPA Verification – Data Package 60433254

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Rocksmith Geoengineering

Project Manager: J. Ingram

Project Name: Ameren LCPA Verification

Project Number: 23007

Reviewer: G. Morey

Validation Date: 8/11/23

Laboratory: Pace Analytical

SDG #: 60433254

Analytical Method (type and no.): EPA 200.7 (Calcium); SM 2540C (TDS)

Matrix:  Air  Soil/Sed.  Water  Waste

Sample Names L-UMW-7D, LUMW-DUP-1, L-UMW-9D, L-UMW-1D, L-UMW-3D, L-UMW-5D, L-UMW-FB-1

**NOTE:** Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

| Field Information  | YES                                 | NO                                  | NA                                  | COMMENTS                           |
|--|-------------------------------------|-------------------------------------|-------------------------------------|------------------------------------|
| a) Sampling dates noted?   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            | 7/13/2023 - 7/14/2023              |
| b) Sampling team indicated?  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            | GTM                                |
| c) Sample location noted?  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |                                    |
| d) Sample depth indicated (Soils)?   | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |                                    |
| e) Sample type indicated (grab/composite)?   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            | Grab                               |
| f) Field QC noted?   | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            | See Notes                          |
| g) Field parameters collected (note types)?  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            | pH, Spec Cond, Turb, Temp, DO, ORP |
| h) Field Calibration within control limits?  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |                                    |
| i) Notations of unacceptable field conditions/performances from field logs or field notes? | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |                                    |
| j) Does the laboratory narrative indicate deficiencies?                                    | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | No lab narrative.                  |
| Note Deficiencies:   | <hr/> <hr/>                         |                                     |                                     |                                    |

### Comments/Notes:

Field Blanks:

L-UMW-FB-1 @ L-UMW-5D: Calcium (37.6J), TDS (11.5). Results > 10x blank, no qualification necessary.

MS/MSD:

3394172/3394173: MS recovery low, MSD recovery and RPD OK, no qualification necessary. Associated with sample -003.

3394174: MS recovery high, associated with unrelated sample, no qualification necessary.

RE: Project: AMEREN LCPA  
Pace Project No.: 60442420

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory between November 18, 2023 and November 21, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City
- Pace Analytical Services - Greensburg

REV-1, 1/30/24: Parameters not required under the CCR rule removed.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## PROJECT NARRATIVE

Project: AMEREN LCPA

Pace Project No.: 60442420

---

**Method:** EPA 200.7

**Description:** 200.7 Metals, Total

**Client:** Rocksmith Geoengineering, LLC.

**Date:** January 30, 2024

### General Information:

15 samples were analyzed for EPA 200.7 by Pace Analytical Services Kansas City. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 200.7 with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: 875682

B: Analyte was detected in the associated method blank.

- BLANK for HBN 875682 [MPRP/803 (Lab ID: 3468002)]
  - Cobalt

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 875737

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s):  
60442419016,60442423003,60442425003

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3468158)
- Calcium

**Method:** EPA 200.8

**Description:** 200.8 MET ICPMS

**Client:** Rocksmith Geoengineering, LLC.

**Date:** January 30, 2024

### General Information:

15 samples were analyzed for EPA 200.8 by Pace Analytical Services Kansas City. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 200.8 with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: 875747

B: Analyte was detected in the associated method blank.

- BLANK for HBN 875747 [MPRP/803 (Lab ID: 3468176)]
- Cadmium

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

H1: Analysis conducted outside the EPA method holding time.

- L-UMW-1D (Lab ID: 60442420012)
- L-UMW-3D (Lab ID: 60442420013)
- L-UMW-FB-1 (Lab ID: 60442420009)

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

### Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

### Additional Comments:

Analyte Comments:

QC Batch: 878920

## PROJECT NARRATIVE

Project: AMEREN LCPA

Pace Project No.: 60442420

---

**Method:** EPA 300.0

**Description:** 300.0 IC Anions 28 Days

**Client:** Rocksmith Geoengineering, LLC.

**Date:** January 30, 2024

### General Information:

15 samples were analyzed for EPA 300.0 by Pace Analytical Services Kansas City. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

H1: Analysis conducted outside the EPA method holding time.

- L-UMW-5D (Lab ID: 60442420014)
- L-UMW-6D (Lab ID: 60442420015)

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 875787

L1: Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

- LCS (Lab ID: 3470527)
- Fluoride

QC Batch: 876922

L1: Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

- LCS (Lab ID: 3476789)
- Fluoride

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 875787

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s):  
60442419016,60442420001,60442423003,60442425001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3468421)
  - Fluoride
- MS (Lab ID: 3468424)
  - Sulfate
- MS (Lab ID: 3468427)
  - Sulfate
- MS (Lab ID: 3468430)
  - Fluoride
- MSD (Lab ID: 3468425)
  - Sulfate

## QUALIFIERS

Project: AMEREN LCPA

Pace Project No.: 60442420

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

1e See case narrative

2e See case narrative.

B Analyte was detected in the associated method blank.

H1 Analysis conducted outside the EPA method holding time.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

**RE: Data Validation Summary, Labadie Energy Center – LCPA – Data Package 60442420**

---

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was analyzed outside of hold time controls, the sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a compound was detected in a blank (i.e. method, field), and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
- When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).
- When a duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a laboratory control sample criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Rocksmith Geoengineering  
 Project Name: Ameren LCPA  
 Reviewer: G. Morey

Project Manager: J. Ingram  
 Project Number: 23007  
 Validation Date: 1/30/2024

Laboratory: Pace Analytical

SDG #: 60442420

Analytical Method (type and no.): EPA 200.7/200.8/7470 (Total Metals); SM 2320B (Alkalinity); SM 2540C (TDS); EPA 300.0 (Anions);

Matrix:  Air  Soil/Sed.  Water  Waste  EPA 903.1/904.0 (Radium 226+228)

Sample Names L-UMW-2D, L-UMW-4D, L-UMW-7D, L-UMW-8D, L-UMW-9D, L-BMW-1D, L-BMW-2D, L-UMW-DUP-1, L-UMW-FB-1, L-UMW-MS-1, L-UMW-MSD-1, L-UMW-1D, L-UMW-3D, L-UMW-5D, L-UMW-6D, L-UMW-DUP-2, L-UMW-FB-2

**NOTE:** Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

### Comments/Notes:

General:

Some chloride and TDS samples were analyzed outside of hold time. Results qualified as estimates.

Chloride and/or sulfate were diluted in several samples; no qualification necessary.

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

### Comments/Notes:

#### Method Blanks:

3468002: cobalt (1.6J). Associated with samples -003 through -009. Results < RL reported as ND at RL.

3468169: barium (0.67J). Associated with samples -001 and -012 through -017. No qualification necessary, results > RL and 10x blank, one result a non-detect.

3468176: cadmium (0.21J). Associated with samples -001 and -012 and -017. Results < RL reported as ND at RL.

#### Field Blanks:

L-UMW-FB-1 @ L-UMW-8D: beryllium (0.14J). Result < RL, qualified as ND at RL.

L-UMW-FB-2 @ L-UMW-1D: boron (16.6J), potassium (84.6J), chromium (0.42J), chloride (1.1). Chromium result < RL, qualified as ND at RL. No other qualification necessary.

#### Laboratory Control Samples:

3470527: LCS recovery high for fluoride, associated with samples -001 through -009. Detected results (1) qualified as estimates.

3476789: LCS recovery high for fluoride, associated with samples -012 through -017. All results are non-detects, no qualification necessary.

#### Duplicates:

L-UMW-DUP-1 @ L-UMW-7D: DUP RPD exceeds limit for beryllium (33%). Radium 228 detected in field duplicate and not in parent sample, results qualified as estimates.

L-UMW-DUP-2 @ L-UMW-5D: DUP RPD exceeds limit for sulfate (16%). Magnesium detected in field duplicate and not in parent sample, results qualified as estimates.

Lab duplicate max RPD: 10%: alkalinity, TDS; 15%: chloride, fluoride, sulfate

#### MS/MSD:

3468158: MS recovery low for calcium, associated with unrelated sample, no qualification necessary.

3468421/3468422: MS recovery low for fluoride, MSD recovery and RPD within control limits, no qualification necessary.

3468427/3468428: MS/MSD recoveries low for sulfate associated with unrelated sample, no qualification necessary.

3468430/3468431: MS/MSD recoveries low and RPD exceeds control limit for fluoride, associated with unrelated sample, no qualification necessary.

3473233/3473234: MS/MSD recoveries low for chloride, associated with unrelated sample, no qualification necessary.

## **QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST**

## Data Qualification:

| Sample Name | Constituent(s) | Result | Qualifier | Reason   |

RE: Project: AMEREN LCPA-CA  
Pace Project No.: 60442419

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory between November 18, 2023 and November 21, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City
- Pace Analytical Services - Greensburg

REV-1, 1/30/24: Parameters not required under the CCR rule removed.

REV-2, 1/31/24: Excluded samples L-LMW-1S, L-LMW-2S, L-LMW-4S, L-LMW-7S, and L-LMW-8S added.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## PROJECT NARRATIVE

Project: AMEREN LCPA-CA

Pace Project No.: 60442419

---

**Method:** EPA 200.7

**Description:** 200.7 Metals, Total

**Client:** Rocksmith Geoengineering, LLC.

**Date:** January 31, 2024

### General Information:

28 samples were analyzed for EPA 200.7 by Pace Analytical Services Kansas City. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Sample Preparation:

The samples were prepared in accordance with EPA 200.7 with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: 875682

B: Analyte was detected in the associated method blank.

- BLANK for HBN 875682 [MPRP/803 (Lab ID: 3468002)
  - Cobalt

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 875680

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60442374001,60442419007

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3467997)
  - Potassium
- MSD (Lab ID: 3467998)
  - Potassium

QC Batch: 875737

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s):  
60442419016,60442423003,60442425003

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3468158)
  - Calcium

**Method:** EPA 300.0

**Description:** 300.0 IC Anions 28 Days

**Client:** Rocksmith Geoengineering, LLC.

**Date:** January 31, 2024

### General Information:

28 samples were analyzed for EPA 300.0 by Pace Analytical Services Kansas City. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 875610

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.

- LCS (Lab ID: 3467696)
- Fluoride

QC Batch: 875787

L1: Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

- LCS (Lab ID: 3470527)
- Fluoride

QC Batch: 876922

L1: Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

- LCS (Lab ID: 3476789)
- Fluoride

### Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 875610

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60442419012

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 3467697)
  - Fluoride
  - Sulfate
- MSD (Lab ID: 3467698)
  - Fluoride

## QUALIFIERS

Project: AMEREN LCPA-CA

Pace Project No.: 60442419

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

1e Achieving a constant weight was not met for this sample.

2e See case narrative

3e See case narrative.

B Analyte was detected in the associated method blank.

B0 Analyte was detected in an associated blank at a concentration greater than the MDL.

H1 Analysis conducted outside the EPA method holding time.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

**RE: Data Validation Summary, Labadie Energy Center – LCPA-CA – Data Package 60442419**

---

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was analyzed outside of hold time, the sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a compound was detected in a blank (i.e. method, field), and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
- When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).
- When a duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a laboratory control sample criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a matrix spike/matrix spike duplicate (MS/MSD) criterion was not met, the associated sample result was qualified as an estimate (J, J+ for estimates based high, and J- for estimates based low).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Rocksmith Geoengineering  
 Project Name: Ameren LCPA-CA  
 Reviewer: G. Morey

**Comments/Notes:**

General:

Some TDS samples were analyzed outside of hold time. Results qualified as estimates.

Chloride and/or sulfate were diluted in several samples; no qualification necessary.

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

### Comments/Notes:

#### Method Blanks:

3468002: cobalt (1.6J). Associated with samples -011 through -015 and -019 through -022. Results that are < RL are reported as ND at RL.

3468169: barium (0.67J). Associated with samples -027 through -032. No qualification necessary, results > RL and 10x blank, one result a non-detect.

3468176: cadmium (0.21J). Associated with samples -027 through -032. Results < RL reported as ND at RL.

3481069: TDS (27.0). Associated with samples -001 through -020. Results > RL and 10x blank or non-detect, no qualification necessary.

#### Field Blanks:

L-CA-FB-1 @ L-MW-34(D): beryllium (0.13J), cobalt (1.3J), and chromium (0.44J). Results < RL, qualified as non-detects at RL.

L-CA-FB-2 @ L-AMW-8: cobalt (1.2J), chromium (1.0J) and TDS (17.0). All results non-detect or > RL and 10x blank, no qualification necessary.

L-CA-FB-3 @ L-AM-1D: potassium (73.7J) and chromium (0.48J). Potassium result > RL and 10x blank, no qualification necessary. Chromium result > RL and < 10x blank, result qualified as estimate.

#### Laboratory Control Samples:

3467696: LCS recovery low for fluoride. Associated with samples -001 through -015 and -017 through -020. Results qualified as estimates.

3470527: LCS recovery high for fluoride. Associated with samples -016, -021, and -022. Results are non-detects, no qualification necessary.

3476789: LCS recovery high for fluoride. Associated with samples -027 through -032. Results are non-detects, no qualification necessary.

#### Duplicates:

L-CA-DUP-1 @ L-MW-33(D): beryllium, chromium, and cobalt detected in DUP and not in parent sample, results qualified as estimates. Radium 226 detected in parent sample and not in duplicate, results qualified as estimates.

L-CA-DUP-2 @ L-TP-2M: RPD exceeds control limits for chromium (91%). Cobalt and radium 228 detected in field duplicate and not in parent sample. Results qualified as estimates.

L-CA-DUP-3 @ L-S-1: RPD exceeds control limits for cobalt (22%) and chloride (27%). Radium 226 detected in parent sample and not in field duplicate. Results qualified as estimates.

Laboratory duplicate max RPD: 15: chloride, fluoride, sulfate; 10%: alkalinity, TDS

#### MS/MSD:

3467997/3467998: MS/MSD recoveries high for potassium. Associated with unrelated sample, no qualification necessary.

3468158; 3473233/3473234: MS low for calcium; MS/MSD low for sulfate. Associated with unrelated samples, no qualification necessary.

3467697/3467698: MS/MSD recoveries low for fluoride, associated with sample -012, result qualified as estimate. MS recovery high for sulfate, MSD recovery and RPD within control limits, no qualification necessary.

3468421/3468422: MS recovery low for fluoride. MSD recovery and RPD within control limits, no qualification necessary.

3468427/3468428: MS/MSD recoveries low for sulfate. Associated with unrelated sample, no qualification necessary.

3468430/3468431: MS/MSD recoveries low and RPD out of control limits for sulfate. Associated with -016. Qualified as estimate.

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

**Data Qualification:**

| Sample Name | Constituent(s) | Result | Qualifier | Reason   |
|-------------|----------------|--------|-----------|--|
| L-CA-FB-1   | TDS            | 17     | UJ        | Analyzed outside of hold time                        |

### ASSESSMENT MONITORING STATISTICAL EVALUATION LCPA SURFACE IMPOUNDMENT LABADIE ENERGY CENTER, FRANKLIN COUNTY, MISSOURI

This Technical Memorandum provides the results of the Assessment Monitoring Statistical Evaluation for the October 2022 sampling event at the LCPA Surface Impoundment at the Labadie Energy Center located in Franklin County, Missouri. Included in this memorandum is a brief summary of constituents that are present at a Statistically Significant Level (SSL), a list of site-specific Groundwater Protection Standards (**Table 1**), and the Sanitas Technologies™ (Sanitas) statistical software output for each of the Appendix IV parameters (**Appendix A** and **Appendix B**).

The Appendix IV constituents were evaluated for SSLs using the methods and procedures outlined in the Groundwater Monitoring Plan's (GMP) Statistical Analysis Plan (SAP). The following outlier was removed prior to the calculation of confidence limits.

- Cobalt
  - UMW-1D at 2.7 J micrograms per liter ( $\mu\text{g/L}$ ) on 4/11/2022. The result is statistically higher than other cobalt results at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.

An analysis of the outliers removed to-date was completed and two statistical outliers that were previously removed were added back into the dataset prior to the calculation of confidence limits.

- Molybdenum
  - UMW-5D at 263 and 584  $\mu\text{g/L}$  on 11/7/2019 and 11/2/2021. These values were removed in April 2020 and November 2021 because the results were statistically higher than other molybdenum values at the same well. However, the results have been confirmed by subsequent sampling events and the results are no longer outliers.

No new SSLs were identified in the October 2022 sampling event. The SSLs reported for the October 2022 monitoring event are as follows:

- Molybdenum at UMW-3D(R), UMW-4D, UMW-5D, UMW-6D, and UMW-7D

WSP appreciates this opportunity to provide hydrogeological and engineering support services to Ameren. If you have any questions or comments regarding the information provided, please call our office at (314) 984-8800.

| Thallium         | µg/L  | 2                        | 2         | DQR  |

Notes:

- 1. µg/L - micrograms per liter.
- 2. mg/L - milligrams per liter.
- 3. pCi/L - picocuries per liter.
- 4. MCL - Maximum Contaminant Level. MCLs from United States Environmental Protection Agency (USEPA) Drinking Water Standards and Health Advisories.  
<http://water.epa.gov/drink/contaminants/index.cfm>.
- 5. Health Based Groundwater Protection Standards (GWPS) were adopted for Appendix IV parameters without an MCL (i.e. cobalt, lithium, molybdenum, and lead). Information available at <https://www.epa.gov/coalash/coal-ash-rule>.
- 6. Values were calculated using statistical methods outlined for Detection Monitoring and are used for returning to Detection Monitoring based on available data to date.
- 7. DQR - Double Quantification Rule. If all baseline data are less than the Practical Quantitation Limit (PQL), then the DQR will be used. More information on the DQR is provided in the Statistical Analysis Plan.
- 8. Site GWPS is either the MCL/Health Based GWPS or based on background levels (calculated as described in the Statistical Analysis Plan for Assessment Monitoring), whichever is higher.
- 9. GWPS and background values calculated using results collected through February 2021 from monitoring wells BMW-1D and BMW-2D.

**APPENDIX B**

**Sanitas Trending Confidence  
Bands Statistical Output**

Sanitas™ v.9.6.36 For the statistical analyses of ground water by Golder Associates only. UG  
Hollow symbols indicate censored values.

### Sen's Slope and 95% Confidence Band

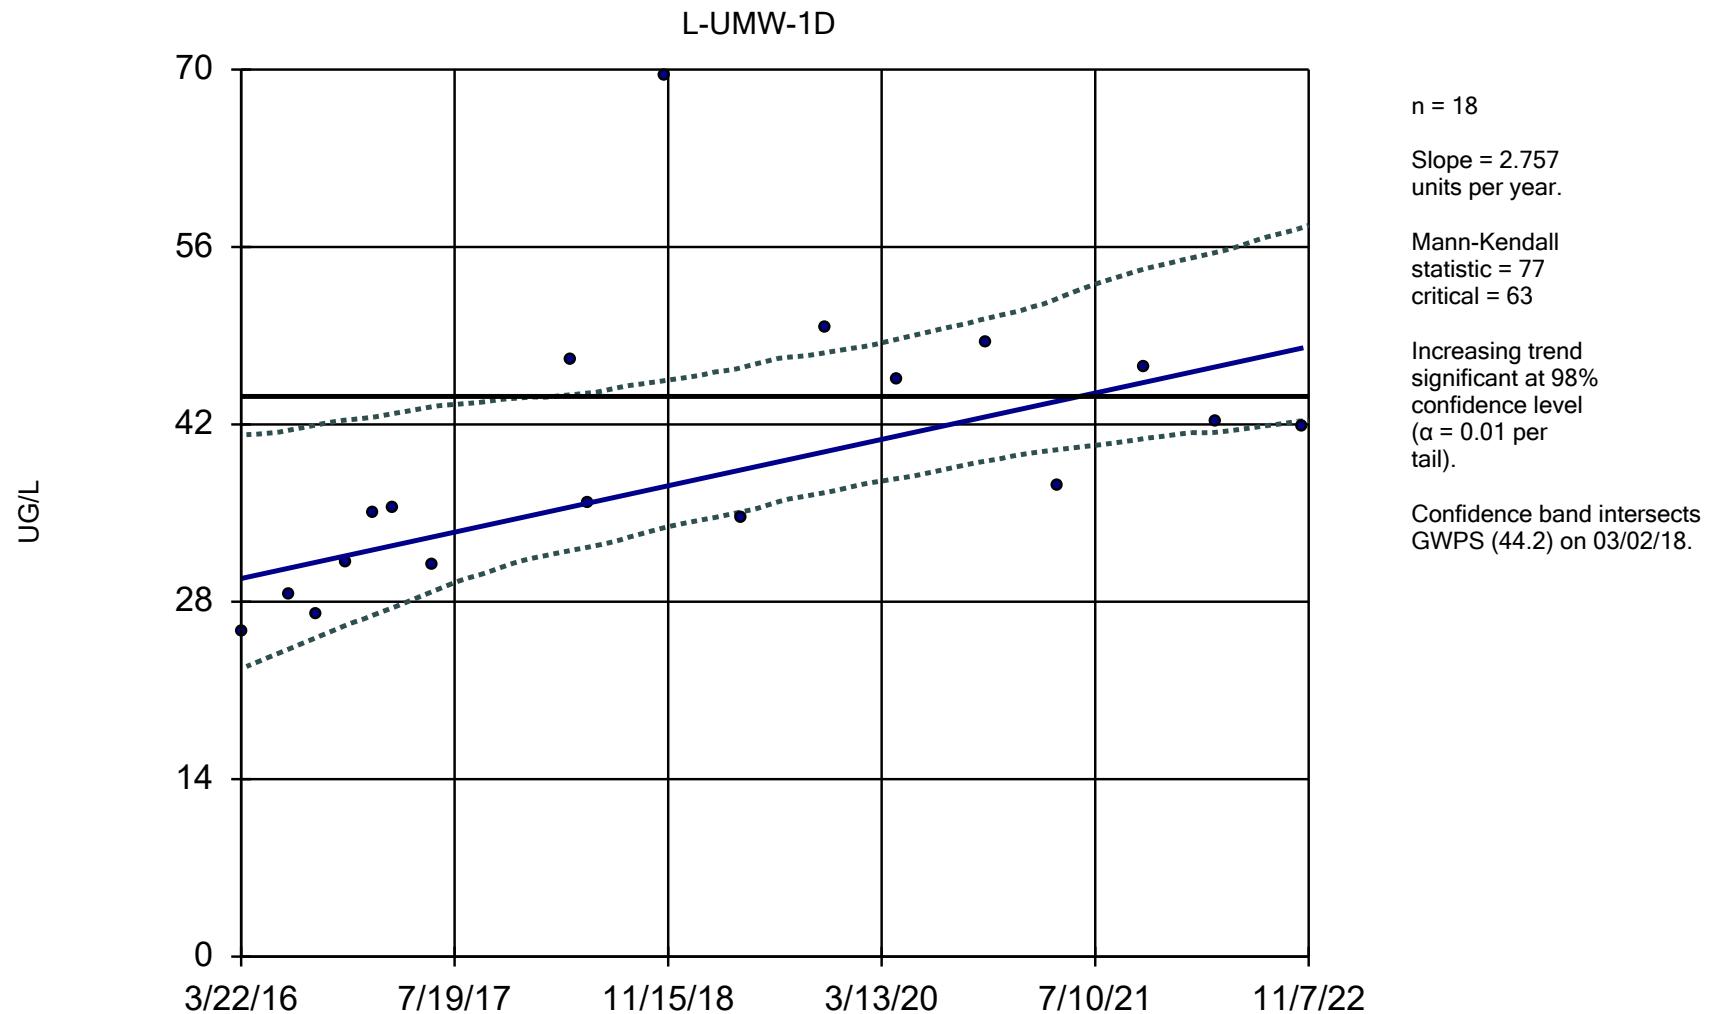

L-UMW-9D

Constituent: ANTIMONY, TOTAL Analysis Run 2/3/2023 9:04 AM

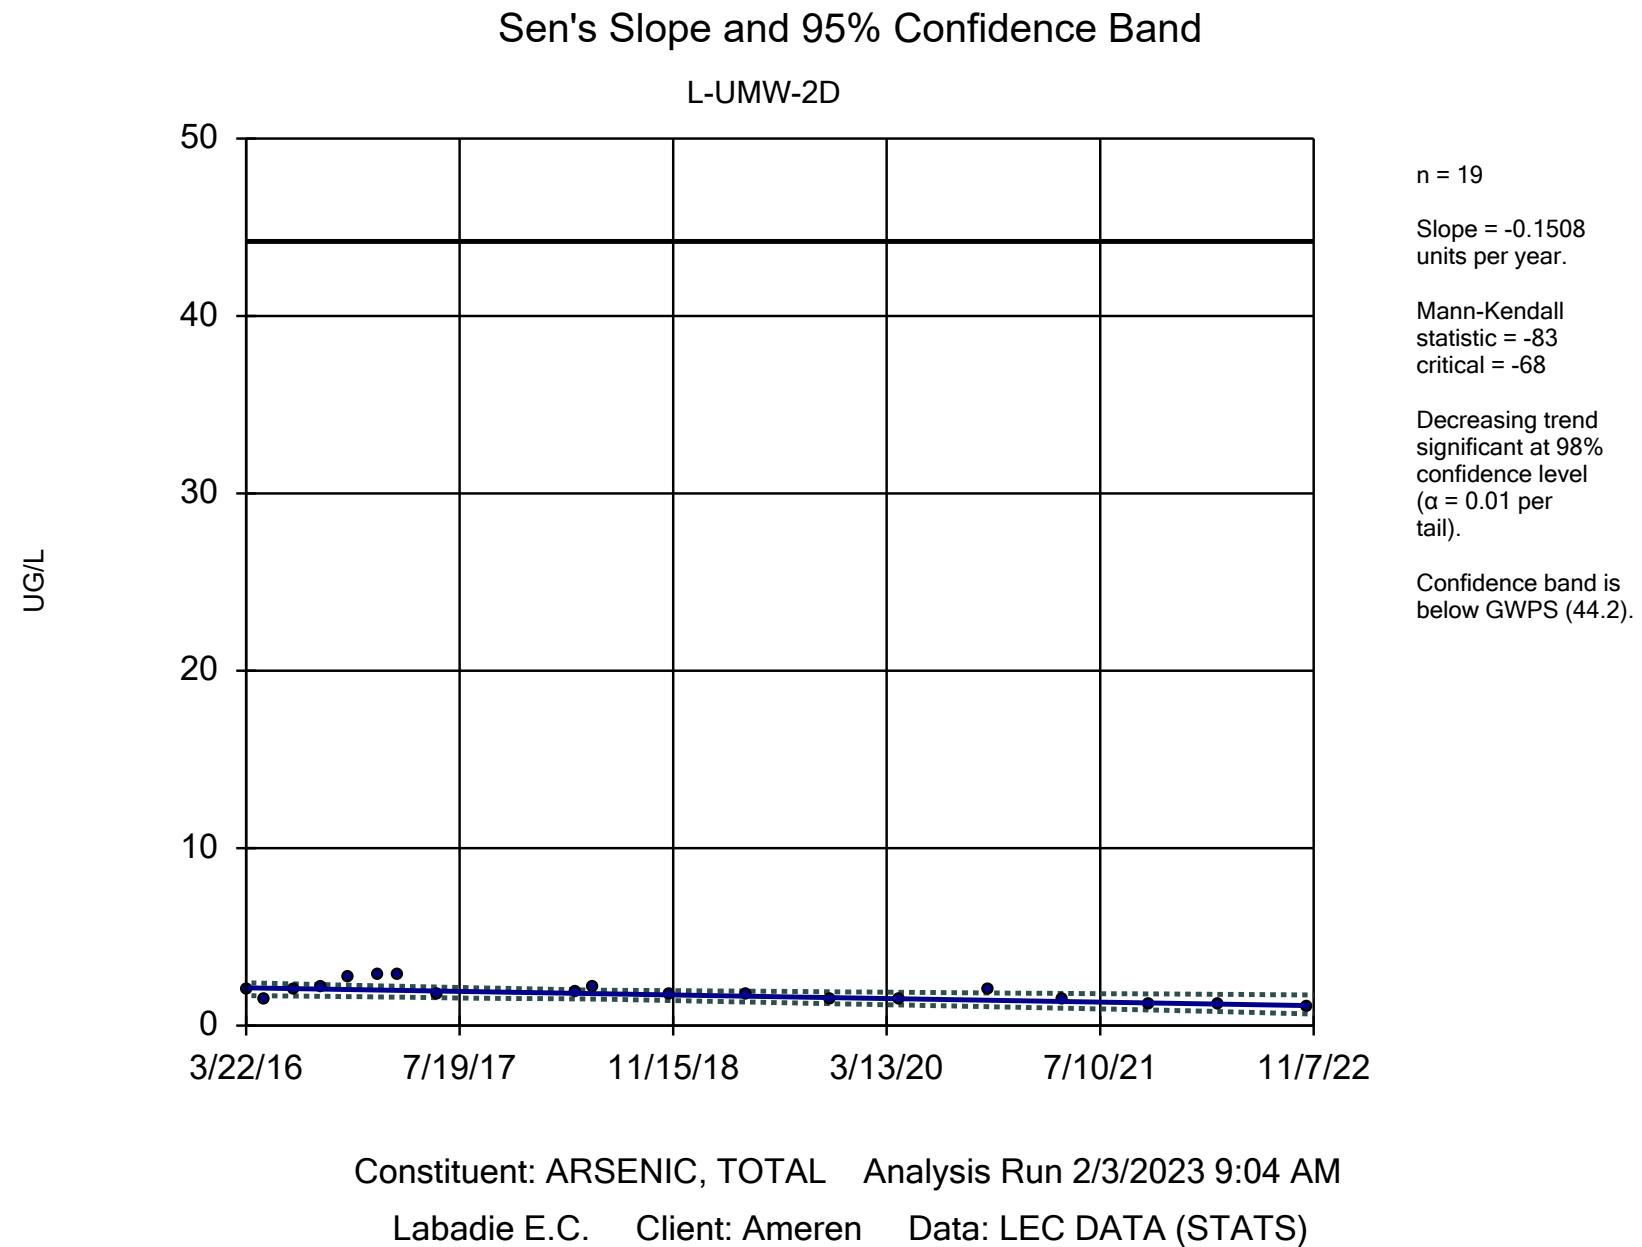

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

### Sen's Slope and 95% Confidence Band

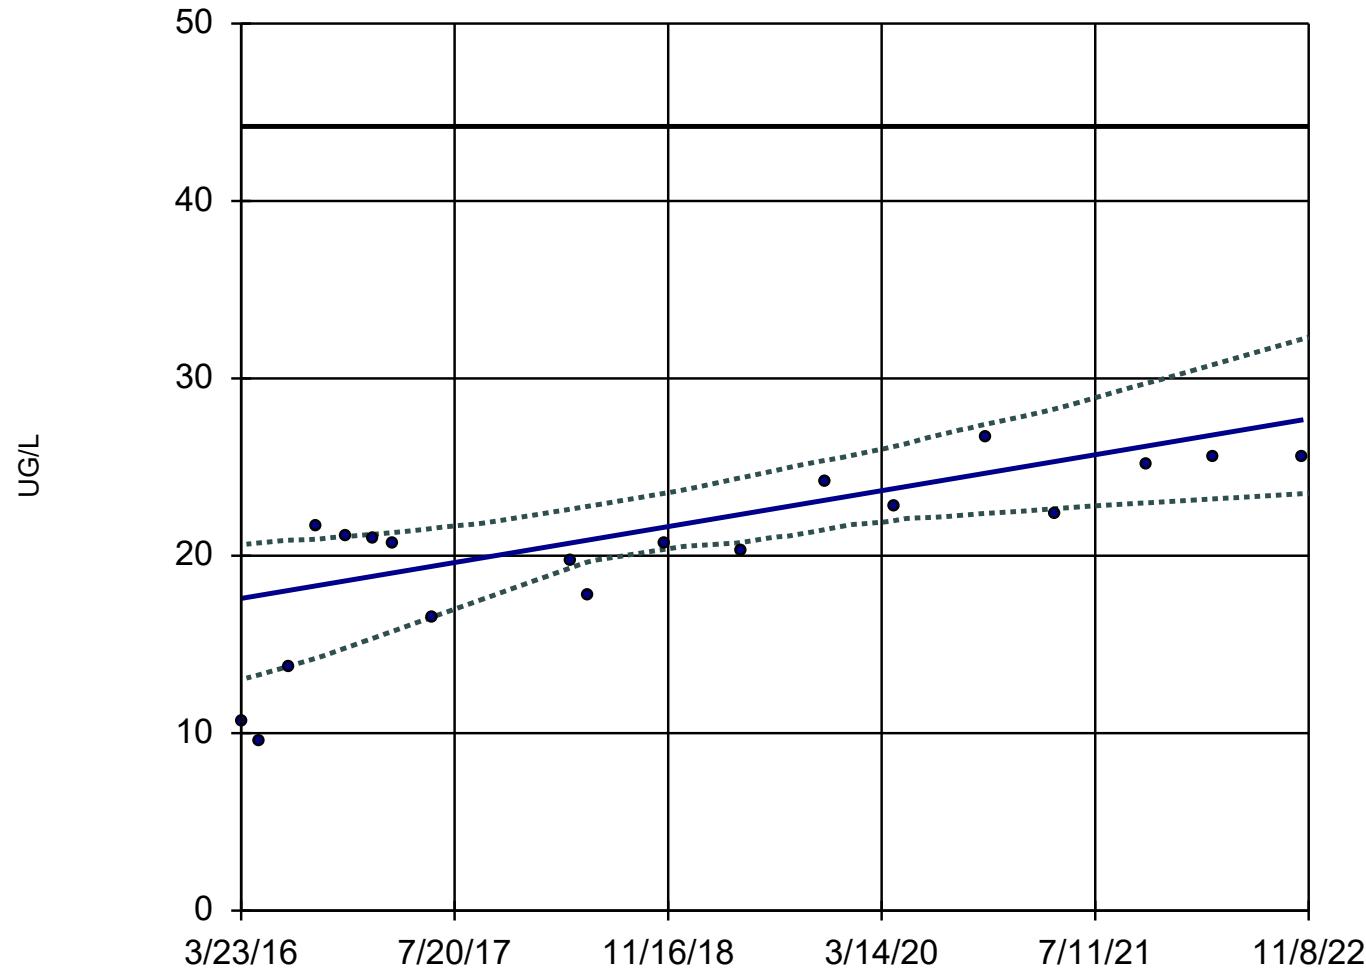

Constituent: ARSENIC, TOTAL Analysis Run 2/3/2023 9:04 AM

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

### Sen's Slope and 95% Confidence Band

L-UMW-7D

n = 19

Slope = 1.526  
units per year.

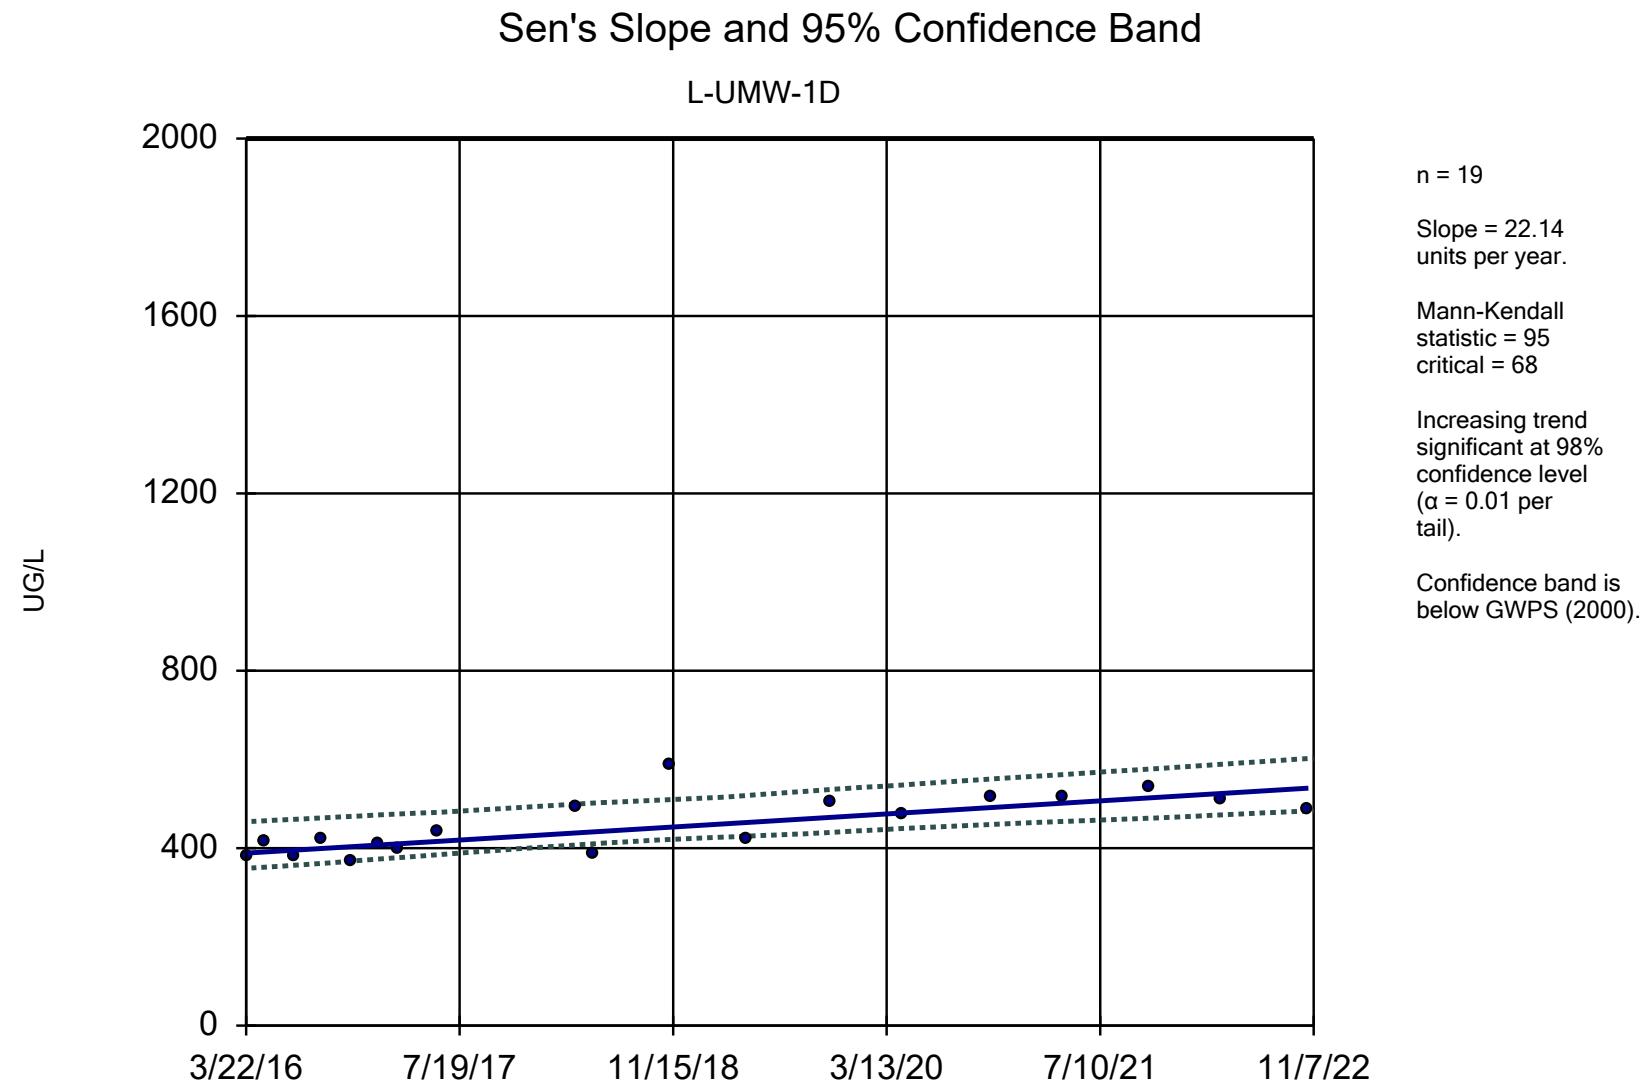

Mann-Kendall  
statistic = 100  
critical = 68

Increasing trend  
significant at 98%  
confidence level  
( $\alpha = 0.01$  per  
tail).

Confidence band is  
below GWPS (44.2).

Ingram, R.G., Grant Morey

**RE:** **Assessment Monitoring Statistical Evaluation – LCPA Surface Impoundment  
Labadie Energy Center, Franklin County, Missouri**

## 1.0 INTRODUCTION

This Technical Memorandum provides the results of the Assessment Monitoring Statistical Evaluation for the May 2023 sampling event at the LCPA Surface Impoundment at the Labadie Energy Center located in Franklin County, Missouri. Included in the memorandum is a brief summary of constituents that are present at a Statistically Significant Level (SSL), a list of site-specific Groundwater Protection Standards (**Table 1**), and the Sanitas Technologies™ (Sanitas) statistical software output for each of the Appendix IV parameters (**Appendix A** and **Appendix B**).

## 2.0 STATISTICAL EVALUATION

The Appendix IV constituents were evaluated for SSLs using the methods and procedures outlined in the Statistical Analysis Plan (SAP). In addition to outliers noted in previous statistical evaluations, the following outliers were removed prior to the calculation of confidence limits:

- Fluoride
    - L-UMW-4D at Non-Detect [<0.12 milligrams per liter (mg/L)] on 10/27/22: Result is statistically lower than other fluoride results at the same well. The low result is not consistent with previous or subsequent fluoride results at the well and is an outlier.

An analysis of the outliers removed from the dataset to-date was completed and two statistical outliers that were previously removed were added back into to dataset prior to the calculation of confidence limits:

- Fluoride
    - L-UMW-7D at 0.13 J and 0.16 J mg/L on 5/2/2019 and 11/6/2019, respectively: Removed in April 2021 as outliers because the results were statistically lower than other fluoride values at the same well. However, based on subsequent sampling results the low results were confirmed and are no longer outliers.

Based on the results from the confidence interval and trend analysis, no new SSLs were noted. SSLs at the LCPA Surface Impoundment as of May 2023 continue to be:

- Molybdenum at wells L-UMW-3D(R), L-UMW-4D, L-UMW-5D, L-UMW-6D and L-UMW-7D

## 3.0 CLOSING

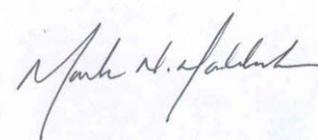

Rocksmith appreciates this opportunity to provide hydrogeological and engineering support services to Ameren. If you have any questions or comments regarding the information provided, please contact the undersigned.

Sincerely,

**Rocksmith Geoengineering, LLC**

Jeff Ingram, R.G.  
*Senior Geologist, Partner*

Mark Haddock, P.E., R.G.  
*Principal Engineer, Senior Partner*

| Lead             | µg/L  | 15                       | 15        | DQR  |
| Lithium          | µg/L  | 40                       | 47.4      | 47.4   |
| Mercury          | µg/L  | 2                        | 2         | DQR  |
| Molybdenum       | µg/L  | 100                      | 100       | DQR  |
| Radium 226 + 228 | pCi/L | 5                        | 5         | 4.14   |
| Selenium         | µg/L  | 50                       | 50        | DQR  |
| Thallium         | µg/L  | 2                        | 2         | DQR  |

Notes:

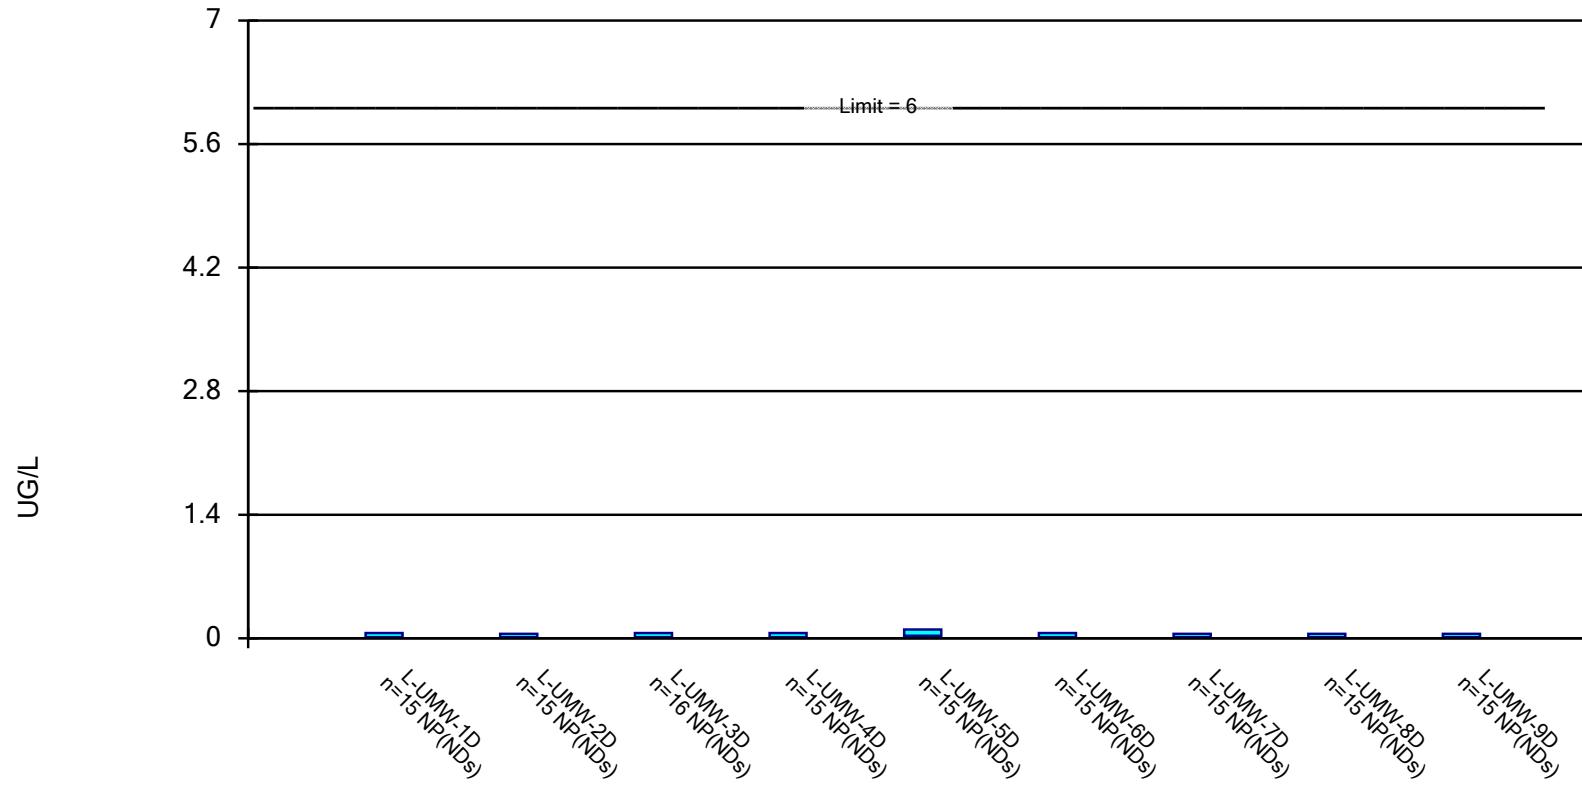

1. µg/L - micrograms per liter.
2. mg/L - milligrams per liter.
3. pCi/L - picocuries per liter.
4. MCL - Maximum Contaminant Level. MCLs from United States Environmental Protection Agency (USEPA) 2012 Edition of the Drinking Water Standards and Health Advisories. Updated January 9, 2023 at <http://water.epa.gov/drink/contaminants/index.cfm>.
5. Health Based Groundwater Protection Standards (GWPS) were adopted for Appendix IV parameters without an MCL (i.e. cobalt, lithium, molybdenum, and lead). Information available at <https://www.epa.gov/coalash/coal-ash-rule>.
6. Values were calculated using statistical methods outlined for Detection Monitoring and are used for returning to Detection Monitoring based on available data to date.
7. DQR - Double Quantification Rule. If all baseline data are less than the Practical Quantitation Limit (PQL), then the DQR will be used. More information on the DQR is provided in the Statistical Analysis Plan.
8. Site GWPS is either the MCL/Health Based GWPS or based on background levels (calculated as described in the Statistical Analysis Plan for Assessment Monitoring), whichever is higher.
9. GWPS and background values calculated using results through May 2023 from monitoring wells BMW-1D and BMW-2D.

### CORRECTIVE ACTION STATISTICAL EVALUATION LCPA SURFACE IMPOUNDMENT LABADIE ENERGY CENTER, FRANKLIN COUNTY, MISSOURI

This Technical Memorandum provides the results of the Corrective Action Monitoring statistical analyses from the October 2022 sampling event for the LCPA Surface Impoundment at the Labadie Energy Center located in Franklin County, Missouri. As outlined in the Remedy Selection Report for the LCPA, Corrective Action at the LCPA consists of two phases:

- 1) Source control, stabilization, and containment of CCR by installation of a low-permeability geomembrane cap.
- 2) Once source control is achieved, monitor the natural attenuation (MNA) of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modelling evaluations to document concentration trends following Corrective Action.

Phase 1 of Corrective Action commenced on September 28, 2019, and was substantially completed on December 30, 2020, with the installation of the low permeability cover system. Included in this memorandum is a summary of constituents that are currently in exceedance of the groundwater protection standard (GWPS), a list of site-specific Groundwater Protection Standards (**Table 1**), and the Sanitas Technologies™ (Sanitas) statistical software output for each of the Appendix IV parameters (**Appendix A**).

The initial Corrective Action sampling event was completed in April 2020, and seven (7) sampling events have been completed in total as a part of the Corrective Action Program at the LEC. This analysis uses results collected since the beginning of Corrective Action monitoring (April 2020) for the determination of constituents exceeding the GWPS, as data collected prior to this time were collected during active conditions at the LCPA, prior to cessation of CCR disposal in the LCPA and are not representative of groundwater conditions since the initiation of closure. Several constituents were reported at concentrations below the practical quantitation limit (PQL) during the April 2020 sampling event including beryllium, cadmium, cobalt, lead, mercury, and thallium. Because these constituents were not detected during the initial Corrective Action sampling event, they were not re-sampled/tested during the subsequent 2020 semi-annual sampling events in May and November 2020. Like the April 2020 sampling event, the samples collected during the April 2021 event were analyzed for all Appendix IV parameters, and antimony, beryllium, cadmium, cobalt, lead, mercury, and thallium were not detected above the PQL. Therefore, these analytes were not tested for during the subsequent November 2021 sampling event. Similarly, antimony, beryllium, cadmium, chromium, lead, mercury, and thallium were not detected above the

PQL during the April 2022 sampling event. Thus, these analytes were not tested for during the subsequent October 2022 sampling event.

Only three results are available for beryllium, cadmium, lead, mercury, and thallium; thus, confidence intervals could not be calculated because Corrective Action statistical analyses require a minimum of four (4) sampling events. Each of the three results collected during the Corrective Action monitoring period for beryllium, cadmium, lead, mercury, and thallium are below the PQL. As a result, beryllium, cadmium, lead, mercury, and thallium are not evaluated in this statistical evaluation.

The Appendix IV constituents were evaluated for exceedances above the GWPS using the methods and procedures outlined in the Corrective Action Groundwater Monitoring Plans (CAGMP) Statistical Analysis Plan (SAP). An outlier analysis was completed as the first step of the statistical evaluation. The outlier analysis included results collected as a part of the Corrective Action monitoring program. The following outliers were removed prior to the calculation of confidence limits.

- Antimony
  - TP-4D at 1.0 microgram per liter ( $\mu\text{g/L}$ ) on 4/15/2020. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent antimony results at the well and is an outlier.
- Cobalt
  - BMW-1S at 1.9 J  $\mu\text{g/L}$  on 2/18/2021. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent cobalt results at the well and is an outlier.
  - TP-1D at 6.9  $\mu\text{g/L}$  on 4/11/2022. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent cobalt results at the well and is an outlier.
- Fluoride
  - S-1 at 1.7 milligrams per liter (mg/L) on 4/11/2022. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent fluoride results at the well and is an outlier.
- Lithium
  - MW-33[D] at 25.3  $\mu\text{g/L}$  on 4/16/2021. The result is statistically lower than other values at the same well. The low result is not consistent with previous or subsequent lithium results at the well and is an outlier.
  - BMW-1S and BMW-2S at Non-Detect (ND) in November 2021. Analysis of the November 2021 sampling event data revealed that laboratory dilution was required for analysis of the samples. The sample dilutions caused the Method Detection Limit (MDL) to be greater than the Groundwater Protection Standard (GWPS). The samples were re-analyzed on 2/9/2022 and the resultant data is consistent with historical results. The diluted results from November 2021 are outliers.
  - BMW-2S, LMW-4S, LMW-8S, MW-24, and TP-4D at ND in February 2022. Analysis of the November 2021 sampling event data revealed that laboratory dilution was required for analysis of the samples. The sample dilutions caused the MDL to be greater than the GWPS. The samples

were re-analyzed on 2/9/2022 and the resultant data is not consistent with historical results. The re-analyzed results from February 2022 are outliers.

■ Radium 226 + 228

- AM-1S at 2.26 picocuries per liter (pCi/L) on 11/3/2020. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent radium 226 + 228 results at the well and is an outlier.

An analysis of the outliers removed to-date was completed and several statistical outliers that were previously removed were added back into the data set prior to the calculation of confidence limits.

■ Arsenic

- LMW-7S at 6.8 µg/L on 11/5/2021. Was removed in April 2022 as an outlier because the result was statistically lower than other values at the same well. However, the result has been confirmed by subsequent sampling events and the result is no longer an outlier.

■ Barium

- LMW-8S at 73.2 µg/L on 11/5/2020. Was removed in April 2022 as an outlier because the result was statistically lower than other values at the same well. However, the result has been confirmed by subsequent sampling events and the result is no longer an outlier.

■ Fluoride

- LMW-7S at ND on 4/15/2021. Was removed in April 2022 as an outlier because the result was statistically lower than other values at the same well. However, the result has been confirmed by subsequent sampling events and the result is no longer an outlier.
- MW-26 at 0.29 mg/L on 4/16/2021. Was removed in April 2021 as an outlier because the result was statistically higher than other values at the same well. However, the result has been confirmed by subsequent sampling events and the result is no longer an outlier.
- MW-33[D] at ND on 4/15/2020. Was removed in April 2021 as an outlier because the result was statistically lower than other values at the same well. However, the result has been confirmed by subsequent sampling events and the result is no longer an outlier.

Following the identification and exclusion of outliers from the introwell data sets, the second step in the statistical analysis was to calculate confidence intervals and compare those to the GWPS<sup>1</sup>. As stated above, the confidence intervals shown in Appendix A are calculated based on results since April 2020. Cobalt at AM-1S and lithium at LMW-7S are new exceedances based on additional data from the October 2022 sampling event. The remaining exceedances are the same as those reported for the April 2022 sampling event. A summary of constituents exceeding the GWPS at corresponding well(s) is as follows:

■ Arsenic at LMW-2S

---

<sup>1</sup> The GWPS is the same limit that was used during Assessment Monitoring period, which was the groundwater monitoring phase immediately prior to Corrective Action.

- Cobalt at AM-1S<sup>2</sup>
- Lithium at LMW-7S
- Molybdenum at LMW-2S, LMW-4S, LMW-8S<sup>3</sup>, AM-1D<sup>3</sup>, TP-2D<sup>3</sup>, TP-3D<sup>3</sup>, TP-3M, AMW-8<sup>3</sup>, MW-33[D]<sup>3</sup>, MW-34[D]<sup>3</sup>, MW-35[D]<sup>3</sup>
- Radium 226 + 228 at TP-1D<sup>3</sup>

Typically, following the calculation of confidence intervals, trend tests would be completed using the Sen's Slope / Mann Kendall analysis as outlined in the statistical analysis plan. However, Sen's Slope / Mann Kendall analysis require 8 independent sampling results to complete as outlined in the USEPA Unified Guidance. Since only 7 sampling events have occurred since the cessation of CCR disposal into the LCPA, the Sen's Slope / Mann Kendall test cannot be completed. Therefore, no constituent well pairs were determined to have a significant trend and no trend charts are included with this Technical Memorandum. However, a visual/qualitative review of the existing data was performed and those well/constituent combinations showing downward trends were identified (see note 3). The remaining well/constituent combinations are showing no specific trend or possibly slight upward trends. Based on the current sampling schedule, it is anticipated that eight sampling events will be available following the Spring 2023 sampling event, and trend analyses will be completed at that time.

Using corrective action statistical methods, GWPS exceedances are reported for arsenic, cobalt, lithium, molybdenum, and radium 226 + 228. However, variability in the initial groundwater sampling results during and directly after the closure of the LCPA is expected, especially at wells nearest the CCR unit where closure grading and disturbance activities were greatest. The concentrations reported in these preliminary results are expected to decrease over time as stabilization occurs following the December 2020 closure.

WSP appreciates this opportunity to provide hydrogeological and engineering support services to Ameren. If you have any questions or comments regarding the information provided, please call our office at (314) 984-8800.

Sincerely,

Jeffrey Ingram

Attachments: Table 1 – LCPA Groundwater Protection Standards  
Appendix A – Sanitas Confidence Interval Statistical Output

<sup>2</sup> Although these are exceedances using Corrective Action statistical methods (i.e. the upper confidence limit above the GWPS), no individual values are present above the GWPS. As more data is collected, and the dataset is refined, the degree of uncertainty for the confidence intervals is expected to decrease and these well-constituent pairs are expected to no longer be exceedances.

<sup>3</sup> Based on visual (qualitative) review of the data, these data sets are showing an overall downward trend since April 2020.

| Thallium         | µg/L  | 2                        | 2         | DQR  |

Notes:

- 1. µg/L - micrograms per liter.
- 2. mg/L - milligrams per liter.
- 3. pCi/L - picocuries per liter.
- 4. MCL - Maximum Contaminant Level. MCLs from United States Environmental Protection Agency (USEPA) Drinking Water Standards and Health Advisories.  
<http://water.epa.gov/drink/contaminants/index.cfm>.
- 5. Health Based Groundwater Protection Standards (GWPS) were adopted for Appendix IV parameters without an MCL (i.e. cobalt, lithium, molybdenum, and lead). Information available at <https://www.epa.gov/coalash/coal-ash-rule>.
- 6. Values were calculated using statistical methods outlined for Detection Monitoring and are used for returning to Detection Monitoring based on available data to date.
- 7. DQR - Double Quantification Rule. If all baseline data are less than the Practical Quantitation Limit (PQL), then the DQR will be used. More information on the DQR is provided in the Statistical Analysis Plan.
- 8. Site GWPS is either the MCL/Health Based GWPS or based on background levels (calculated as described in the Statistical Analysis Plan for Assessment Monitoring), whichever is higher.
- 9. GWPS and background values calculated using results collected through February 2021 from monitoring wells BMW-1D and BMW-2D.

**APPENDIX A**

**Sanitas Confidence Interval  
Statistical Output**

## Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

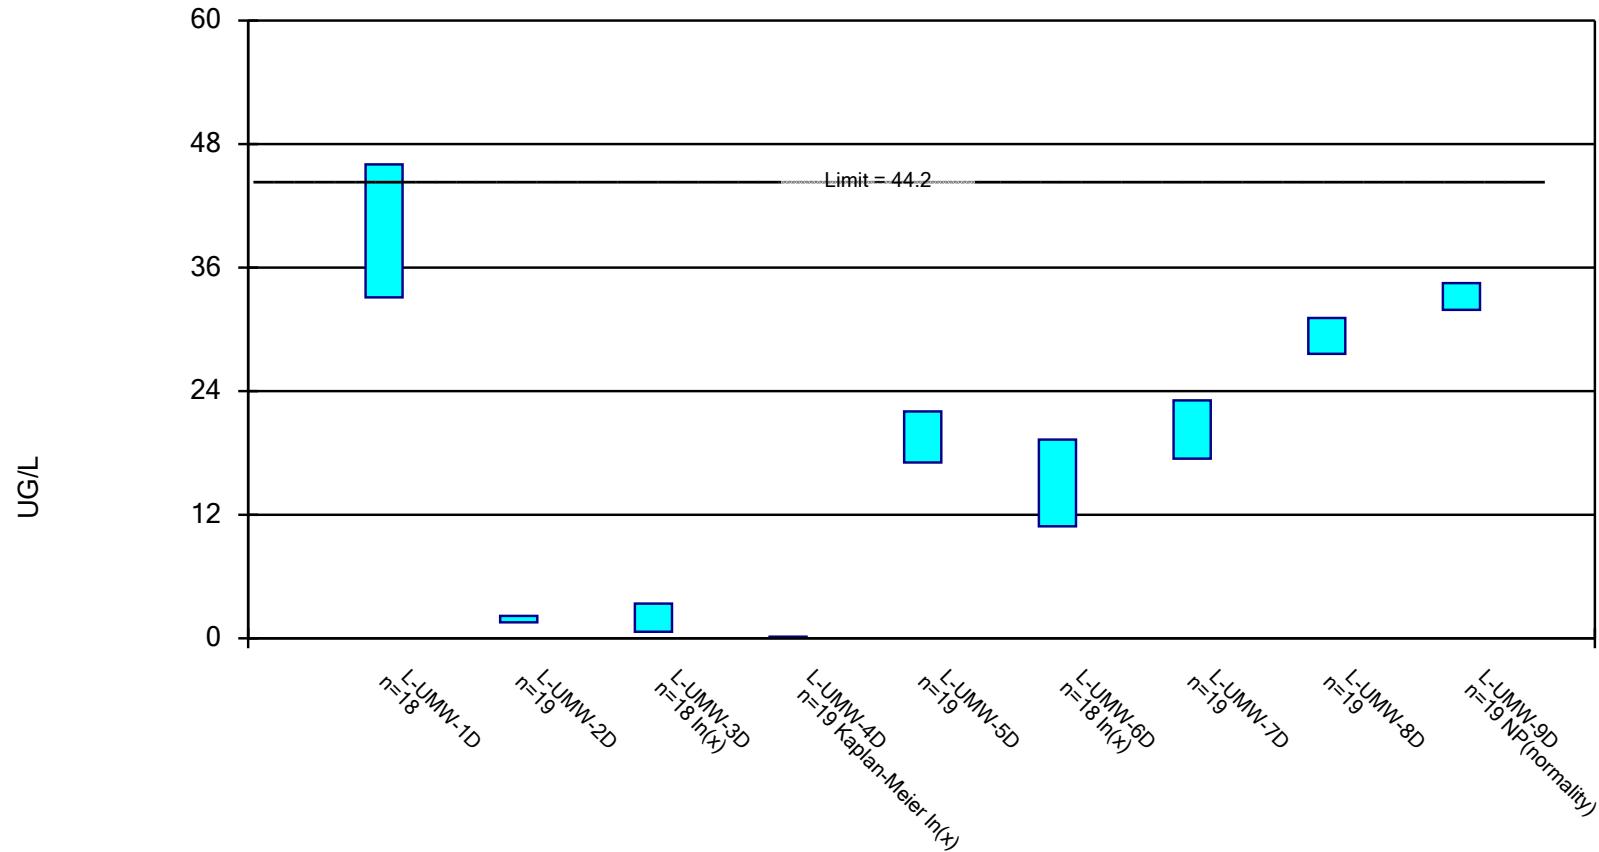

Constituent: ANTIMONY, TOTAL Analysis Run 2/3/2023 9:00 AM

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

## Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

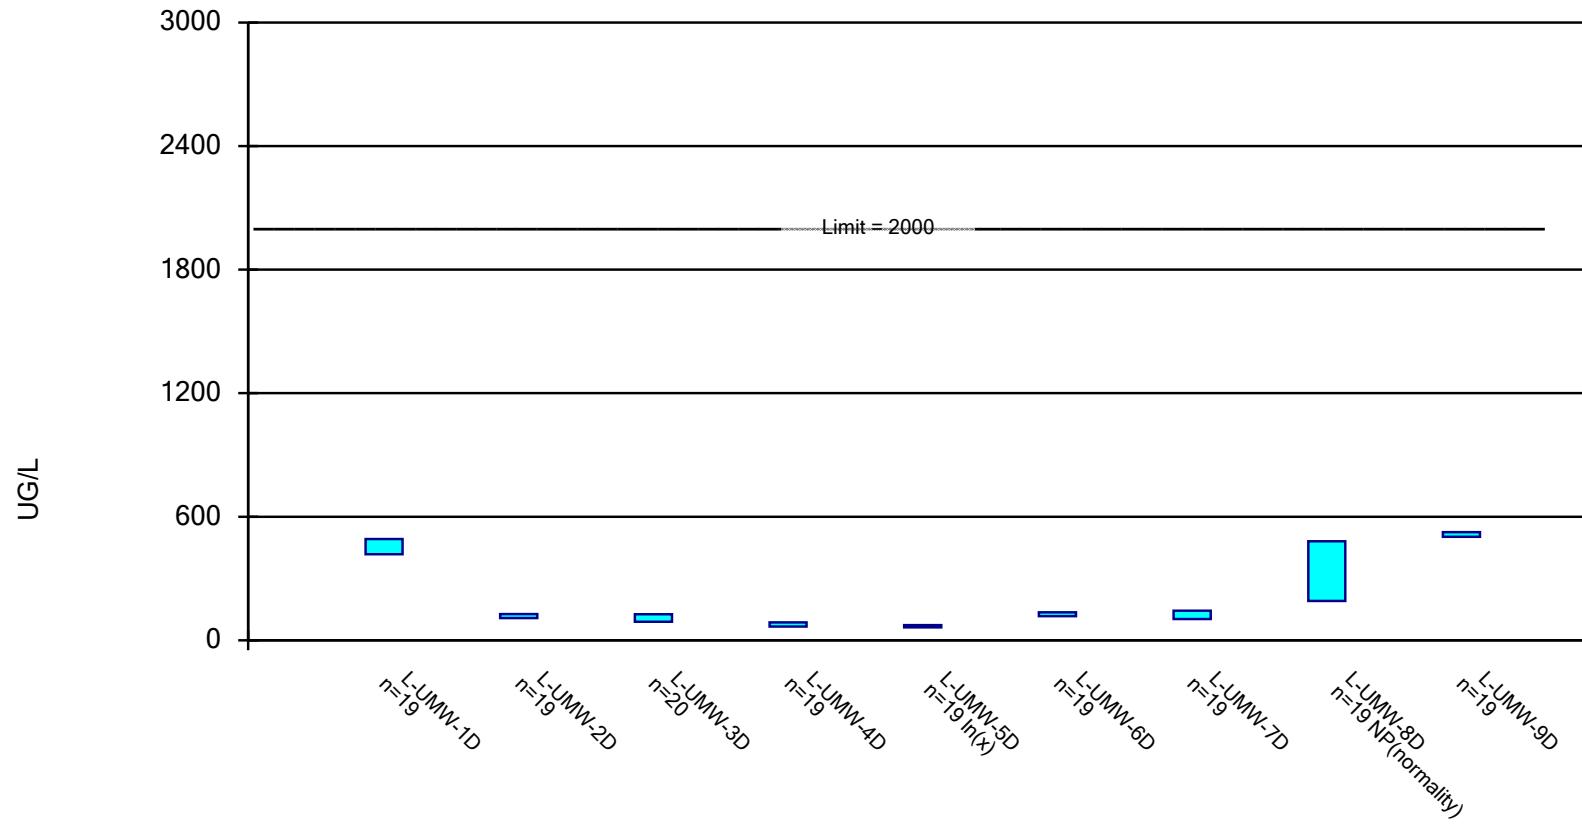

Constituent: ARSENIC, TOTAL Analysis Run 2/3/2023 9:00 AM

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

## Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

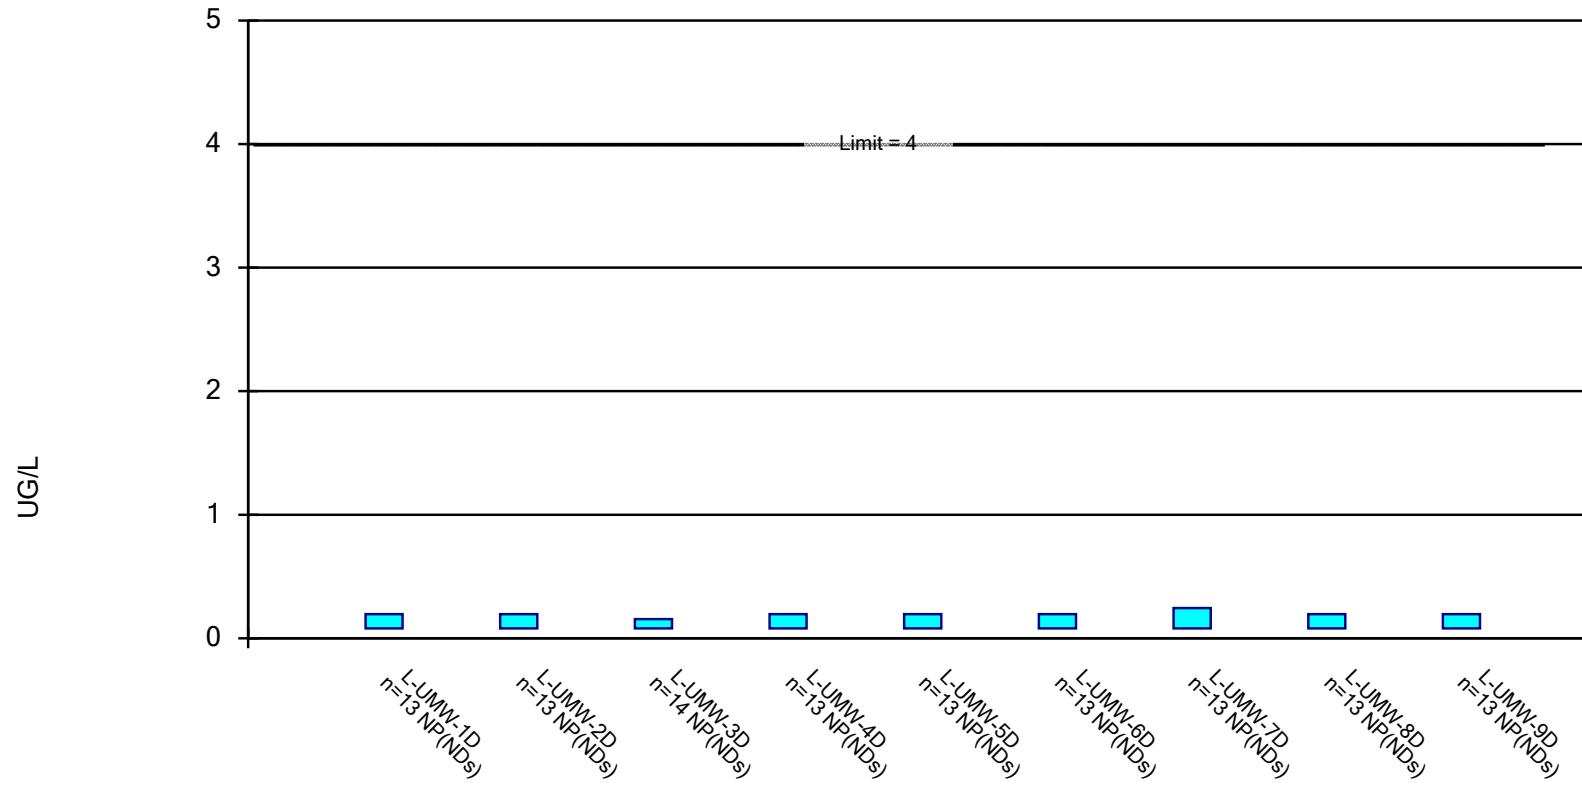

Constituent: BARIUM, TOTAL Analysis Run 2/3/2023 9:01 AM

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

## Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

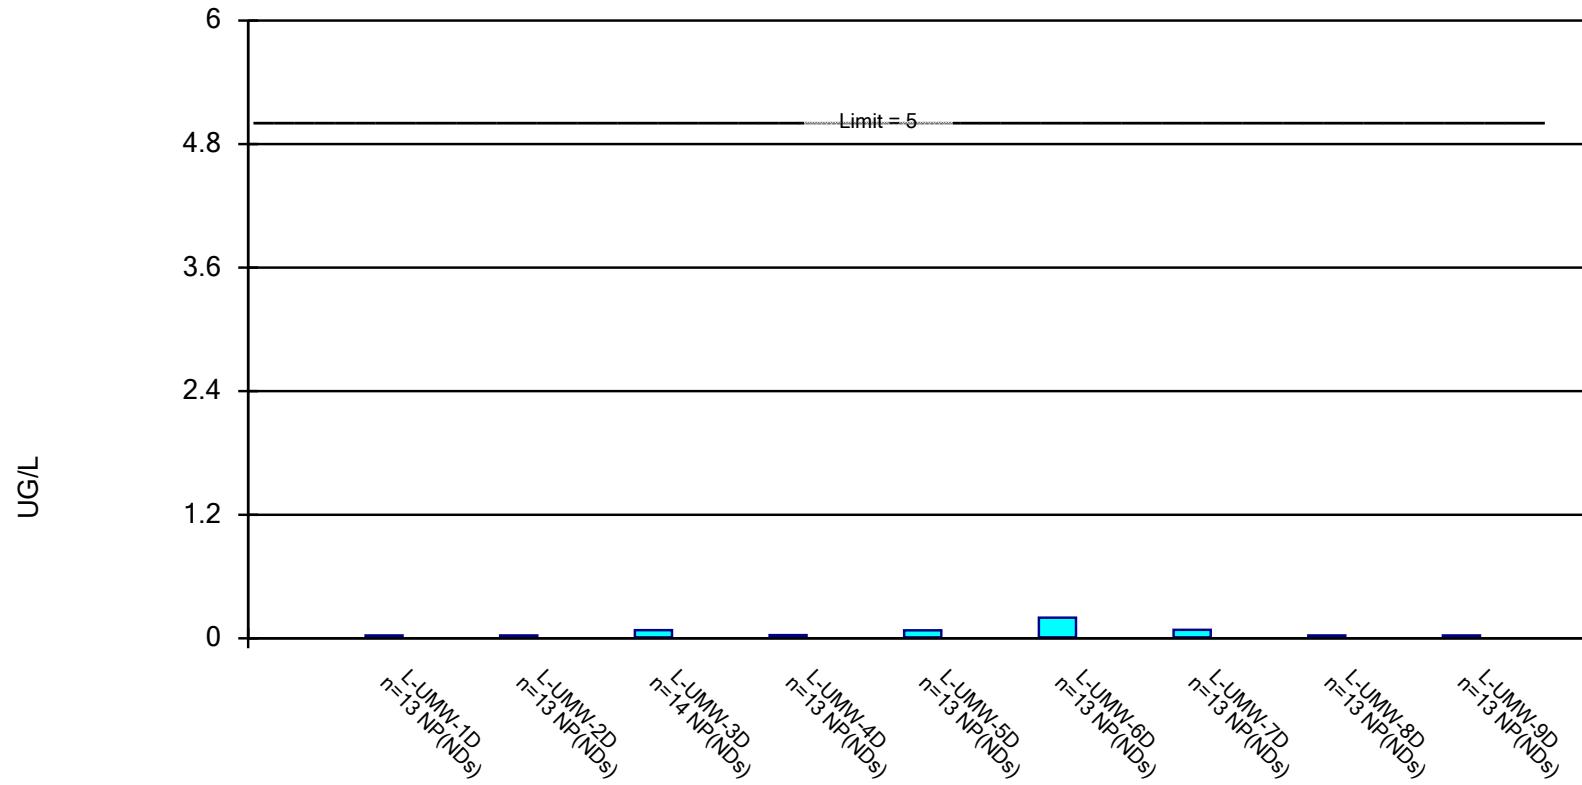

Constituent: BERYLLIUM, TOTAL Analysis Run 2/3/2023 9:01 AM

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

## Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

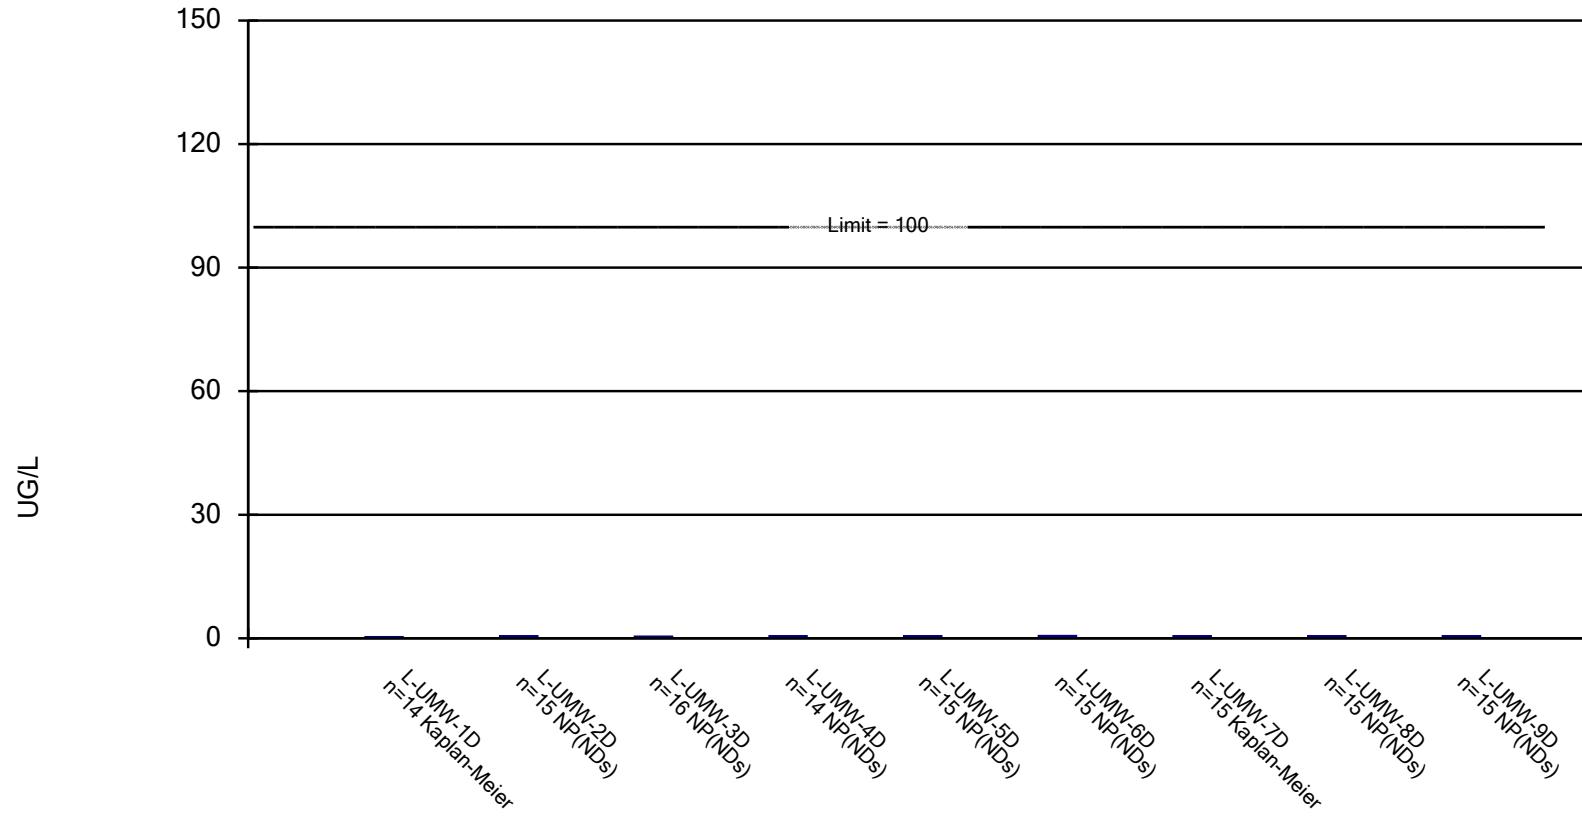

Constituent: CADMIUM, TOTAL Analysis Run 2/3/2023 9:01 AM

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

## Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

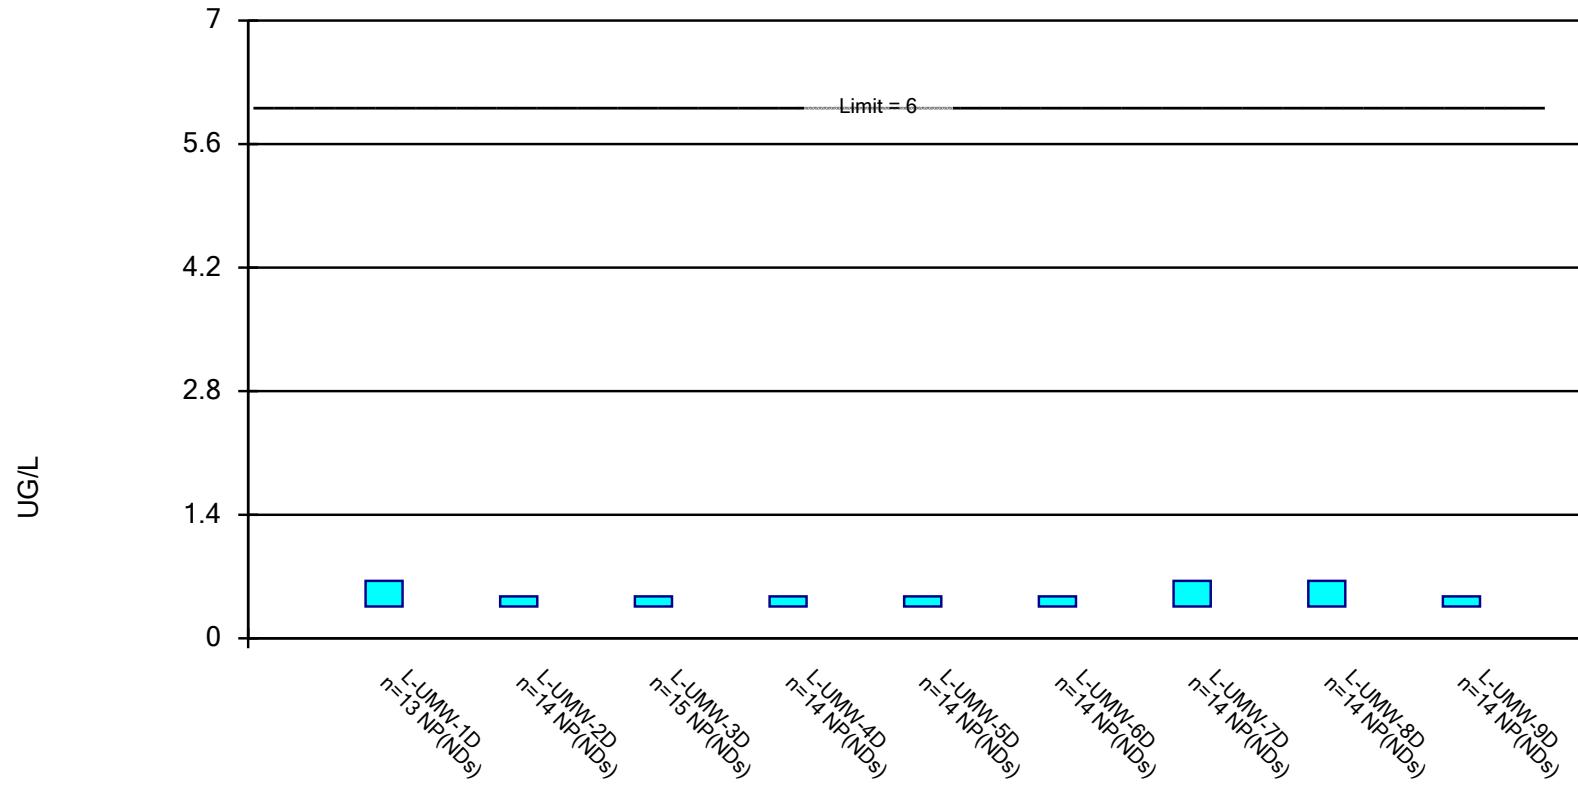

Constituent: CHROMIUM, TOTAL Analysis Run 2/3/2023 9:01 AM

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

## Non-Parametric Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01.

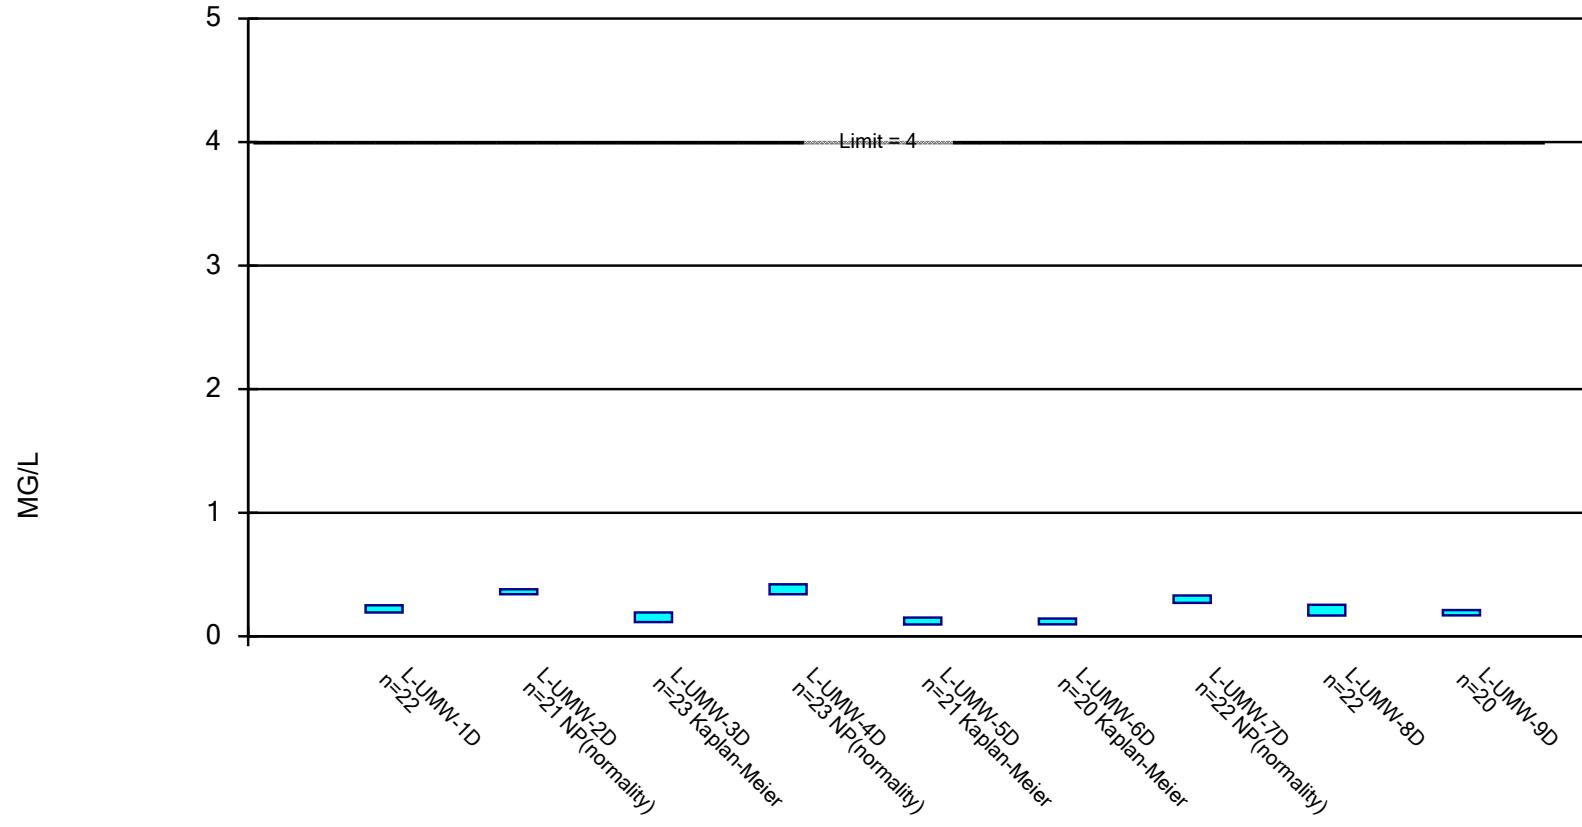

Constituent: COBALT, TOTAL Analysis Run 2/3/2023 9:01 AM

Labadie E.C. Client: Ameren Data: LEC DATA (STATS)

## Parametric and Non-Parametric (NP) Confidence Interval

Compliance Limit is not exceeded. Per-well alpha = 0.01. Normality Test: Shapiro Wilk, alpha based on n.

**RE:** **Corrective Action Statistical Evaluation – LCPA Surface Impoundment  
Labadie Energy Center, Franklin County, Missouri**

## 1.0 INTRODUCTION

This Technical Memorandum provides the results of the Corrective Action Monitoring statistical analyses from the May 2023 sampling event for the LCRA Surface Impoundment at the Labadie Energy Center (LEC) located in Franklin County, Missouri. As outlined in the remedy selection report for the LCRA, Corrective Action at the LCRA consists of two phases, as follows:

- 1) Source control, stabilization, and containment of CCR by installation of a low-permeability geomembrane cap.
  - 2) Once source control is achieved, monitor the natural attenuation (MNA) of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modeling evaluations to document concentration trends following Corrective Action.

Phase 1 of Corrective Action commenced on September 28, 2019 and was substantially completed on December 30, 2020 with the installation of a low permeability cover system. Included in this memorandum is a brief summary of constituents that are currently in exceedance of the groundwater protection standard (GWPS), a list of site-specific Groundwater Protection Standards (**Table 1**), and the Sanitas Technologies™ (Sanitas) statistical software output for each of the Appendix IV parameters (**Appendix A** and **Appendix B**).

The initial Corrective Action sampling event was completed in April 2020, and eight (8) sampling events have been completed in total as a part of the Corrective Action Program at the LEC. This analysis uses results collected since the beginning of Corrective Action monitoring (April 2020) for the determination of constituents exceeding the GWPS, as data collected prior to this time were collected during active conditions at the LCRA, prior to cessation of CCR disposal in the LCRA and are not representative of groundwater conditions since the initiation of closure. Several constituents were reported at concentrations below the Practical Quantitation Limit (PQL) during the spring 2020, 2021, 2022, and/or 2023 sampling events, including: antimony, beryllium, cadmium, chromium, cobalt, lead, mercury, and thallium. During years when a constituent reported at concentrations below the PQL in all wells, they were not re-sampled during the subsequent semi-annual sampling event in the fall. There are now at least four results available for each of these constituents, so this is the first Corrective Action statistical evaluation where confidence intervals could be calculated for beryllium, cadmium, lead, mercury, and thallium, in addition to the remaining Appendix IV parameters.

Additionally, now that 8 rounds of Corrective Action Sampling have been completed, trend tests using the Sen's Slope / Mann Kendall can be completed as outlined in the USEPA Unified Guidance. Therefore, trend tests can now be completed for the following constituents: arsenic, barium, fluoride, lithium, molybdenum, radium 226 + 228, and selenium.

## 2.0 STATISTICAL EVALUATION

---

The Appendix IV constituents were evaluated for exceedances above the GWPS using the methods and procedures outlined in the Corrective Action Groundwater Monitoring Plan's (CAGMP's) Statistical Analysis Plan (SAP). An outlier analysis was completed as the first step of the statistical evaluation. The outlier analysis was performed only on the results collected as a part of the Corrective Action Monitoring Program. In addition to outliers noted in previous Corrective Action evaluations, the following outliers were removed prior to the calculation of confidence limits:

- Arsenic
  - L-S-1 at 1.6 micrograms per liter ( $\mu\text{g/L}$ ) on 11/13/2020. The result is statistically higher than other arsenic values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
- Barium
  - L-TP-2M at 89.5  $\mu\text{g/L}$  on 10/26/2022. The result is statistically lower than other barium values at the same well. The low result has not been confirmed during previous or subsequent sampling events and is an outlier.
- Cobalt
  - L-LMW-1S at 1.8 J  $\mu\text{g/L}$  on 4/16/2020. The result is statistically higher than other cobalt values at the same well. The high result has not been confirmed during subsequent sampling events and is an outlier.
- Fluoride
  - L-AM-1D at Non-Detect [ $<0.12$  milligrams per liter (mg/L)] on 10/26/2022. The result is statistically lower than other fluoride values at the same well. The low result has not been confirmed during previous or subsequent sampling events and is an outlier.
  - L-TP-2D at 0.14 J mg/L on 10/26/2022. The result is statistically lower than other fluoride values at the same well. The low result has not been confirmed during previous or subsequent sampling events and is an outlier.
- Lithium
  - L-BMW-1S at Non-Detect ( $<23.0 \mu\text{g/L}$ ) on 11/1/2021. Analysis of the November 2021 sampling event data revealed that laboratory dilution was required for analysis of this sample. The sample dilution caused the MDL to be greater than the GWPS. The sample was re-analyzed on 2/9/2022

and the resultant data is not consistent with historical results. The low result has not been confirmed during previous or subsequent sampling events and is an outlier.

- L-BMW-1S at 23.8 µg/L on 4/6/2022. The result is statistically higher than other lithium values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
- Molybdenum
  - L-TP-1D at Non-Detect (<20 µg/L) on 10/26/2022. Following data validation procedures, the result was qualified as a non-detect at the practical quantitation limit (PQL), making the effective result higher than other molybdenum values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
  - L-TP-4D at Non-Detect (<20 µg/L) on 10/24/2022. Following data validation procedures, the result was qualified as a non-detect at the PQL, making the effective result higher than other molybdenum values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
  - L-MW-24 at Non-Detect (<20 µg/L) on 10/24/2022. Following data validation procedures, the result was qualified as a non-detect at the PQL, making the effective result higher than other molybdenum values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
  - L-S-1 at Non-Detect (<20 µg/L) on 10/26/2022. Following data validation procedures, the result was qualified as a non-detect at the PQL, making the effective result higher than other molybdenum values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
- Thallium
  - L-MW-35[D] at 7.9 µg/L on 11/2/2021. The result is statistically higher than other thallium results at the same well. The high result has not been confirmed during subsequent sampling events and is an outlier.
- Cobalt
  - L-BMW-1S at 1.9 J µg/L on 2/18/2021. The result was removed as an outlier in October 2022 because it was statistically higher than other values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in cobalt concentrations than observed with the data available for the October 2022 statistical evaluation. This cobalt result is no longer considered an outlier.
- Lithium

- L-BMW-2S at Non-Detect (<23 µg/L) on 11/1/2021. The result was removed as an outlier in October 2022 because it was statistically lower than other lithium values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in lithium concentrations than observed with the data available for the October 2022 statistical evaluation. This lithium result is no longer considered an outlier.
  - L-LMW-4S at 29 J µg/L on 11/3/2021. The result was removed as an outlier in October 2022 because it was statistically lower than other lithium values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in lithium concentrations than observed with the data available for the October 2022 statistical evaluation. This lithium result is no longer considered an outlier.
  - L-LMW-8S at Non-Detect (<23 µg/L) on 11/5/2021. The result was removed as an outlier in October 2022 because it was statistically lower than other lithium values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in lithium concentrations than observed with the data available for the October 2022 statistical evaluation. This lithium result is no longer considered an outlier.
  - L-MW-24 at 26.2 J µg/L on 11/4/2021. The result was removed as an outlier in October 2022 because it was statistically higher than other lithium values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in lithium concentrations than observed with the data available for the October 2022 statistical evaluation. This lithium result is no longer considered an outlier.
- Molybdenum
- L-BMW-1S at 2.3 J µg/L on 11/1/2021. The result was removed as an outlier in April 2022 because it was statistically higher than other molybdenum values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in molybdenum concentrations than observed with the data available for the April 2022 statistical evaluation. This molybdenum result is no longer considered an outlier.
  - L-MW-24 at 2.9 J µg/L on 11/4/2021. The result was removed as an outlier in April 2022 because it was statistically higher than other molybdenum values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in molybdenum concentrations than observed with the data available for the April 2022 statistical evaluation. This molybdenum result is no longer considered an outlier.
- L-TP-1D at 5.1 J µg/L on 11/4/2021. The result was removed as an outlier in April 2022 because it was statistically higher than other molybdenum values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in molybdenum concentrations than observed with the data available for the April 2022 statistical evaluation. This molybdenum result is no longer considered an outlier.
- L-TP-4D at 4.0 J µg/L on 11/3/2021. The result was removed as an outlier in April 2022 because it was statistically higher than other molybdenum values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in molybdenum

concentrations than observed with the data available for the April 2022 statistical evaluation. This molybdenum result is no longer considered an outlier.

Following the outlier analysis, the second step in the statistical analysis was to calculate confidence intervals and compare those to the site-specific GWPS (**Appendix A**). Confidence interval evaluation was supplemented with Sen's Slope/Mann Kendall Analyses on constituents that have eight independent sampling results at a given well, per the USEPA Unified Guidance (**Appendix B**). The Sen's Slope/Mann-Kendall Analysis identifies well-analyte pairs that have statistically significant trends and calculates confidence bands that vary with time. The upper confidence band, in relation to the GWPS for a given constituent, is used to determine exceedances, as outlined in the site CAGMP. As discussed previously, antimony, beryllium, cadmium, chromium, cobalt, lead, mercury, and thallium do not have the requisite quantity of results to perform Sen's Slope/Mann Kendall Analyses, so only confidence intervals were produced for those constituents.

Using these corrective action statistical methods with data through May 2023, wells with constituents exceeding the GWPS are as follows:

- Arsenic at L-LMW-2S
- Cobalt at L-AM-1S
- Lithium at L-LMW-7S
- Molybdenum at L-LMW-2S, L-LMW-4S, L-LMW-8S, L-AM-1D, L-TP-2D, L-TP-3D, L-TP-3M, L-AMW-8, L-MW-33[D], L-MW-34[D], L-MW-35[D]

Radium 226 + 228 at TP-1D was previously identified as an exceedance in the October 2022 corrective action statistical evaluation. It is no longer an exceedance as of May 2023 since the upper confidence limit is below the GWPS. All other arsenic, cobalt, lithium, and molybdenum exceedances previously identified in October 2022 remain as of this evaluation. Variability in the initial groundwater sampling results during and directly after the closure of the LCPA is expected, especially at wells nearest the CCR unit, where closure grading and disturbance activities were greatest. The concentrations reported in these results following closure are expected to be variable but are expected to decrease over time as stabilization occurs and supplemental corrective measures are put into service.

### 3.0 CLOSING

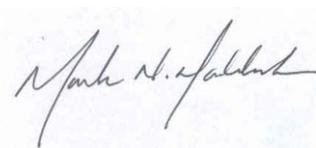

Rocksmith appreciates this opportunity to provide hydrogeological and engineering support services to Ameren. If you have any questions or comments regarding the information provided, please contact the undersigned.

Notes:

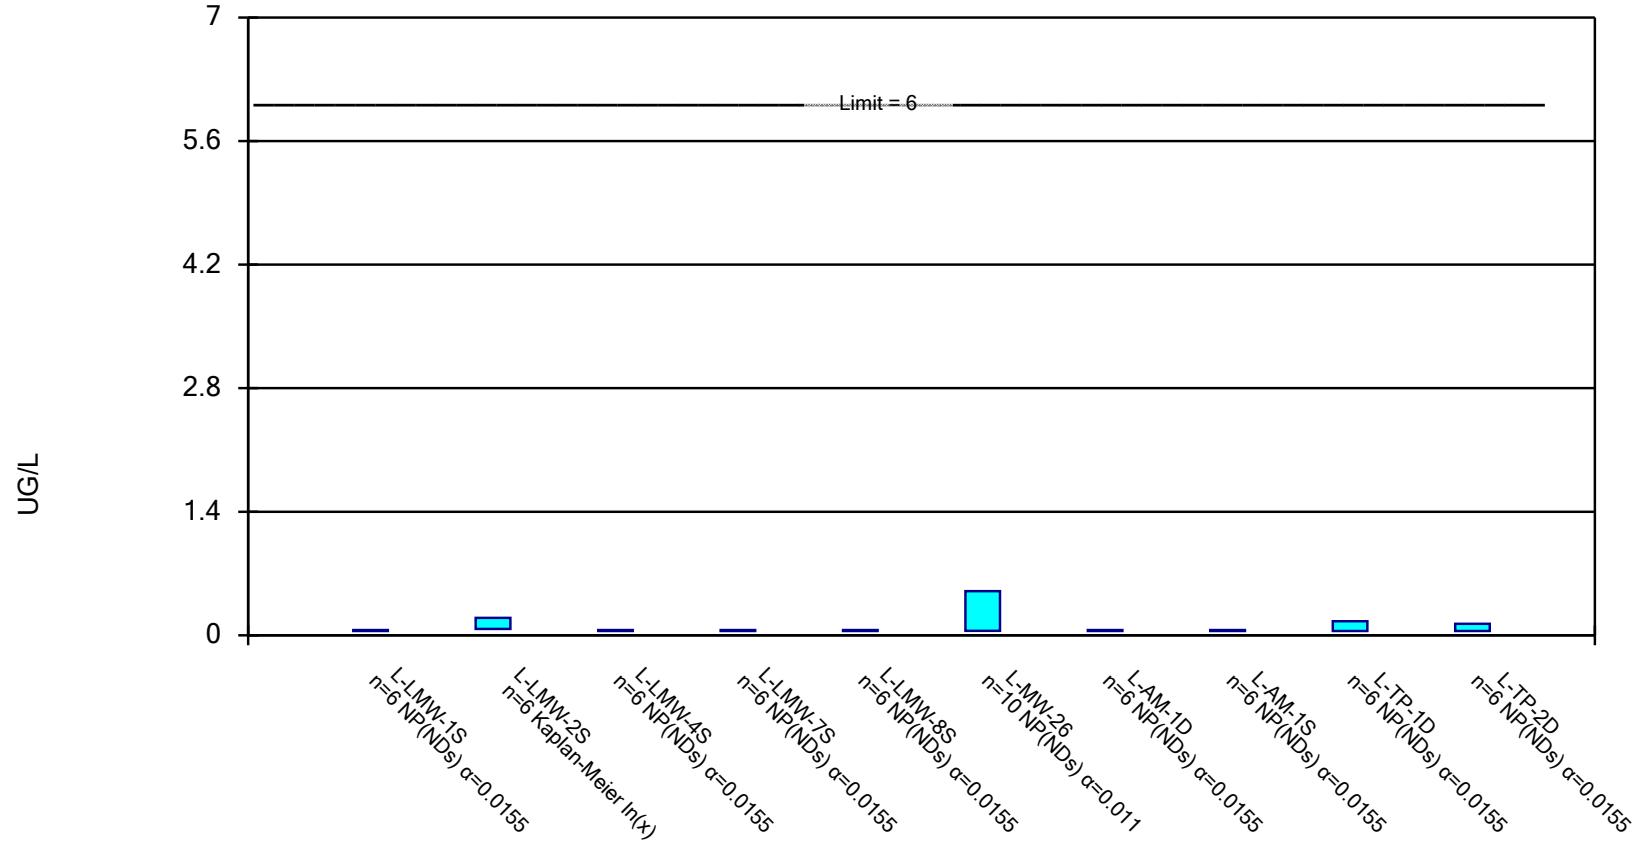

1. µg/L - micrograms per liter.
2. mg/L - milligrams per liter.
3. pCi/L - picocuries per liter.
4. MCL - Maximum Contaminant Level. MCLs from United States Environmental Protection Agency (USEPA) 2012 Edition of the Drinking Water Standards and Health Advisories. Updated January 9, 2023 at <http://water.epa.gov/drink/contaminants/index.cfm>.
5. Health Based Groundwater Protection Standards (GWPS) were adopted for Appendix IV parameters without an MCL (i.e. cobalt, lithium, molybdenum, and lead). Information available at <https://www.epa.gov/coalash/coal-ash-rule>.
6. Values were calculated using statistical methods outlined for Detection Monitoring and are used for returning to Detection Monitoring based on available data to date.
7. DQR - Double Quantification Rule. If all baseline data are less than the Practical Quantitation Limit (PQL), then the DQR will be used. More information on the DQR is provided in the Statistical Analysis Plan.
8. Site GWPS is either the MCL/Health Based GWPS or based on background levels (calculated as described in the Statistical Analysis Plan for Assessment Monitoring), whichever is higher.
9. GWPS and background values calculated using results through May 2023 from monitoring wells BMW-1D and BMW-2D.

# Certification Statement

This *LCPA Corrective Action – Alternative Source Demonstration, Labadie Energy Center, Franklin County, Missouri, USA* has been prepared to comply with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule under the direction of a licensed professional engineer with Rocksmith Geoengineering, LLC.

I hereby certify that this *LCPA Corrective Action – Alternative Source Demonstration, Labadie Energy Center, Franklin County, Missouri, USA* located at 226 Labadie Power Plant Road, Labadie Missouri 63055 has been prepared to meet the requirements of 40 CFR §257.98(a)(1)(i) and 257.95(g)(3)(ii).

**Rocksmith Geoengineering, LLC**

## 1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule (CCR Rule or The Rule), this LCPA Corrective Action – Alternative Source Demonstration has been prepared to document an Alternative Source Demonstration (ASD) for a statistical exceedance of the Groundwater Protection Standard (GWPS) calculated for Ameren Missouri's (Ameren) Labadie Energy Center (LEC) Bottom Ash Surface Impoundment (referred to as the LCPA) Corrective Action Monitoring Well Network. This document satisfies the requirements of §257.98(a)(1)(i) and §257.95(g)(3)(ii), which state that at a minimum, the Corrective Action program must meet that of the Assessment Monitoring Program under §257.95, which allows the owner or operator to demonstrate that a source other than the CCR Unit has caused a constituent to be at a statistical level that exceeds the GWPS was the result of an alternative source or resulted from errors in sampling, analysis, statistical evaluation, or natural variation in groundwater quality.

## 2.0 SITE DESCRIPTION AND BACKGROUND

The LEC is located approximately 35 miles west of downtown St. Louis in Franklin County, Missouri, just south of the Missouri River. **Figure 1** depicts the site location and layout, including the location of LCPA, LCPB and the LCL1 CCR Units. The LEC encompasses approximately 2,400 acres and is located within the Missouri River Valley. The facility is bounded to the north by the Missouri River, to the west by Labadie Creek, to the northeast and east by agricultural land, and to the south by a railroad line and bedrock bluffs.

### 2.1 Geological and Hydrogeological Setting

The site lies between the Missouri River (to the north) and bedrock bluffs (to the south). Flow and deposition from the Missouri River have resulted in thick alluvial deposits that lie on top of bedrock. These alluvial deposits, which can range from approximately 90 to 120 feet thick, comprise the uppermost aquifer. Overall, this alluvial aquifer is described as a fining-upwards sequence of stratified sands and gravels with varying amounts of silts and clays. Based on drilling records, the alluvial aquifer is divided into sub-units, including floodplain deposits, natural levee deposits, and channel deposits along with volumetrically less important loess deposits. Grain sizes of these alluvial deposits are variable.

Beneath the alluvial aquifer lies the bedrock aquifer. Bedrock in this region consists of Ordovician-aged rock. Formations include primarily limestone, dolomite, sandstone, and shale and are comprised of the Platin Group, Joachim Dolomite, St. Peter Sandstone, Powell Dolomite, and the Cotter/Jefferson City Dolomites.

### 2.2 Coal Combustion Residuals (CCR) LCPA Surface Impoundment

The LCPA is in the floodplain of the Missouri River to the south of the LEC generating plant and is constructed with perimeter berms at an elevation of approximately 494 feet above mean sea level (feet MSL), which is above the 100-year flood elevation of 484 feet MSL. Both fly ash and bottom ash have been historically managed and stored in this surface impoundment. Construction drawings indicate that in the deepest portions of the CCR Unit the base depth of CCR extends down approximately 90 feet to an elevation of approximately 400 feet MSL. Directly to the east of the LCPA are two additional CCR Units, the fly ash surface impoundment (LCPB) and the Utility Waste Landfill (UWL) Cell 1 (LCL1), both of which have berm elevations higher than 488 feet MSL. To the south of the LCPA are lower elevation agricultural fields ranging from approximately 465 to 475 feet MSL which extend to the south to the railroad. South of the railroad, bedrock bluffs rise to an elevation of over 600 feet MSL. The western side of the surface impoundment is bounded by a forested area and Labadie Creek, which flows north to the Missouri River.

### 2.3 Corrective Action Background

On January 9, 2019, Ameren initiated its Corrective Measures Assessment (CMA) and posted the CMA report on May 20, 2019. A public meeting was held on May 29, 2019, and responses to public comments are posted on Ameren's CCR website. On August 30, 2019, Ameren published its "Remedy Selection Report – 40 CFR § 257.97 Rush Island, Labadie, Sioux and Meramec CCR Basins" (Remedy Selection Report) that identified source control through installation of a low permeability cover system and use of Monitored Natural Attenuation (MNA) as its

chosen corrective action remedial plan. The Remedy Selection Report's remedial plan consists of two phases as follows:

- 1) Source control, stabilization, and containment of CCR by installation of a low permeability geomembrane cap (a minimum  $1 \times 10^{-7}$  centimeters per second (cm/sec) versus  $1 \times 10^{-5}$  cm/sec required by the CCR Rule).
- 2) Once source control is achieved, monitor the natural attenuation of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modelling evaluations will document that concentrations are decreasing as modelled. Natural attenuation occurs due to naturally occurring processes within the aquifer.

As required by the CCR Rule, the following were completed within 90 days of selecting the remedy (i.e., November 27, 2019): (1) a groundwater monitoring well system was selected and certified by a Professional Engineer, (2) a Statistical Method Certification was prepared and certified by a Professional Engineer, and (3) a Groundwater Monitoring Plan (GMP) was prepared recording the design, installation, development, sampling procedures, as well as statistical methods, and placed in the owner's operating record. The Corrective Action Monitoring Well Network consists of 22 monitoring wells, installed within the shallow, intermediate, and deep zones of the alluvial aquifer as shown on **Figure 1**.

On September 28, 2019, Ameren commenced Phase 1 by initiating closure at the LCPA. Closure of the LCPA has been completed and the first Corrective Action sampling event associated with Phase 2 of the Corrective Measures Remedial Plan was completed in April 2021. On February 20, 2023, Corrective Action statistical methods were used to determine that the following constituents were present at concentrations exceeding the site specific GWPS as follows:

- Arsenic – LMW-2S
- Cobalt – AM-1S
- Lithium – LMW-7S
- Molybdenum – LMW-2S, LMW-4S, LMW-8S, AM-1D, TP-2D, TP-3D, TP-3M, AMW-8, MW-33D, MW-34D, MW-35D
- Radium 226 + 228 (Radium) – TP-1D

### 3.0 EVIDENCE THAT ISOLATED EXCEEDANCES OVER THE GWPS ORIGINATE FROM DIFFERENT SOURCE

Isolated exceedances of the site GWPS using corrective action statistical methods<sup>1</sup> exist for cobalt at monitoring well AM-1S, for lithium at LMW-7S, and for radium at TP-1D. The locations of these monitoring wells are provided in **Figure 1**. For each of these exceedances there are several different lines of evidence that indicate that the statistical exceedance(s) over the GWPS at these monitoring wells are not the result of a release from the LCPA, but rather are from an alternative source. The following detail the different lines of evidence that support this ASD:

- A lack of correlation between key CCR indicators (boron and molybdenum) and exceedances of lithium, cobalt, and radium.

<sup>1</sup> The statistical testing method used to evaluate the Corrective Action monitoring data is the confidence interval method, which is the same method used during Assessment Monitoring, except the null hypothesis for the confidence intervals is reversed. For Corrective Action, the Unified Guidance states that the appropriate null hypothesis is that the groundwater population (mean) exceeds the GWPS for those constituents that exceed the GWPS under Assessment Monitoring program. Therefore, in Corrective Action the Upper Confidence Limit (UCL) is compared to the Groundwater Protection Standard (GWPS) instead of the Lower Confidence Limit (LCL) [as was used during Assessment Monitoring].

- The presence of lithium, cobalt, and radium at similar concentrations in groundwater samples collected upgradient of the LCPA.
- The presence of naturally occurring cobalt, lithium, and radium in sediments in background locations at the LCPA.
- Cobalt, lithium, and radium are naturally occurring elements in soils and alluvial aquifer sediments that are derived from igneous and metamorphic rocks within the Missouri and Mississippi River watersheds.

### 3.1 CCR Indicators

Several types of CCR by-products are generated by coal-fired power plants. The different types of CCR typically display distinct geochemical signatures and indicator parameters. **Table 1** describes the different types of CCRs and their typical indicator parameters (USEPA 2018, EPRI 2011, EPRI 2012, and EPRI 2017).

**Table 1: Types of CCR and Typical Indicator Parameters**

| Type of CCR                                    | Description of CCR<br>(USEPA 2018)  | Key Indicators<br>(EPRI 2011, 2012, 2017)  |
|--|---|--|
| <b>Fly Ash</b>                                 | Fine grained, powdery material composed mostly of silica made from the burning of finely ground coal in the boiler.   | <ul style="list-style-type: none"> <li>■ Boron</li> <li>■ Molybdenum</li> <li>■ Lithium</li> <li>■ Sulfate</li> </ul>                                      |
| <b>Boiler Slag / Bottom Ash</b>                | Molten bottom ash from the slag tap and cyclone type furnaces that turns into pellets that have a smooth glassy appearance after quenching with water.  | <ul style="list-style-type: none"> <li>■ Bromide</li> <li>■ Potassium</li> <li>■ Sodium</li> <li>■ Fluoride</li> </ul>                                     |
| <b>Flue Gas Desulfurization Material (FGD)</b> | A material leftover from the process of reducing sulfur dioxide emissions from a coal-fired boiler that can be a wet sludge consisting of calcium sulfite or calcium sulfate or a dry powdered material that is a mixture of sulfites and sulfates. | <ul style="list-style-type: none"> <li>■ Sulfate</li> <li>■ Fluoride</li> <li>■ Calcium</li> <li>■ Boron</li> <li>■ Bromide</li> <li>■ Chloride</li> </ul> |

Notes:

- 1) Fly ash and boiler slag/bottom ash typically have the same indicator parameters.
- 2) Definitions from USEPA website, available at <https://www.epa.gov/coalash/coal-ash-basics>.
- 3) Key indicators from EPRI 2011, 2012, and 2017.

### 3.2 Site Specific Key CCR Indicators

To be a key CCR Indicator parameter for a specific site, a constituent should be present in relatively high concentrations in the leachate (CCR porewater) when compared to background or other sources (nearby rivers, etc.), not be a common anthropogenic contaminant, and be mostly non-reactive and mobile in the site's hydrogeological environment (EPRI 2012). In 2012, EPRI investigated which constituents are the best indicator parameters for coal ash impacts as outlined in **Table 1**. Of the key indicators listed in **Table 1** for fly ash and boiler slag/bottom ash, boron, molybdenum, lithium, sulfate and fluoride are regularly sampled as part of the CCR Rule. Potassium and sodium are sampled periodically for major ion analysis and testing under the CCR Rule and testing for bromide has not been completed at the site.

**Table 2** provides a snapshot of the concentrations present onsite in the background, Missouri River, and LCPA porewater for each of the constituents sampled on the key indicator list.

**Table 2 – Summary of Potential CCR Impact Indicator Parameters at the Labadie Energy Center**

| Constituent (Units) |         | Back-ground | Missouri River | LCPA Porewater | Advantages and Caveats as Key Indicator (from EPRI 2012)  |
|---------------------|---------|-------------|----------------|----------------|---|
| Boron (µg/L)        | Minimum | ND<50       | 78.7           | 3,360          | Typically present in leachate, non-reactive and mobile in common hydrogeologic environments, and not a common anthropogenic contaminant.  |
|                     | Average | 77.31       | 100.1          | 10,317         |   |
|                     | Maximum | 151         | 123            | 21,700         |   |
| Sulfate (mg/L)      | Minimum | 12.3        | 172            | 254            | Commonly analyzed and very mobile in all hydrogeologic environments. Concentration in impoundment leachate may in some cases be too low relative to background to be useful. Less useful in strongly reducing environments where sulfate can be reduced to hydrogen-sulfide gas.  |
|                     | Average | 39.84       | 192.3          | 275.2          |   |
|                     | Maximum | 146         | 224            | 306            |   |
| Molybdenum (µg/L)   | Minimum | ND<0.52     | 2.0            | 83.7           | Most useful for dry-managed coal ash. May be less mobile than boron in some hydrogeologic environments. Concentrations may be too low in impoundment leachate to be useful if background groundwater has detectable concentrations.   |
|                     | Average | 1.584       | 3.165          | 405.3          |   |
|                     | Maximum | 7.0         | 6.2            | 1,430          |   |
| Lithium (µg/L)      | Minimum | 11.5        | 34.2           | 5.5            | Useful for coal ash management sites where the power plant burned bituminous coal. Leachate concentrations are typically low in coal ash derived from subbituminous and lignite coal  |
|                     | Average | 29.06       | 38.36          | 40.28          |   |
|                     | Maximum | 47.4        | 42.8           | 61.4           |   |
| Potassium (µg/L)    | Minimum | 3,990       | Not Sampled    | 3,540          | Commonly analyzed, although may be less mobile than boron and sulfate. Assure that leachate concentration is higher than background and that there are no anthropogenic sources such as agricultural fields where potassium may be applied in fertilizers.  |
|                     | Average | 5,023       |                | 18,040         |   |
|                     | Maximum | 7,530       |                | 42,100         |   |
| Sodium (µg/L)       | Minimum | 3,570       | Not Sampled    | 50,500         | Useful for coal ash management sites where the power plant injects trona or sodium bicarbonate or burned subbituminous coal. Absent dry sorbent injection, leachate concentrations are considerably lower in coal ash derived from bituminous coal, particularly at impoundments. Assure that leachate concentration is higher than background and that there are no anthropogenic sources such as agricultural fields, or major highways in northern climates where sodium may be applied in road salts. |
|                     | Average | 10,085      |                | 66,967         |   |
|                     | Maximum | 24,900      |                | 84,000         |   |
| Fluoride (mg/L)     | Minimum | 0.0425      | 0.125          | 0.088          | Mobile and non-reactive in common hydrogeologic environments. Assure that leachate concentration is higher than background.   |
|                     | Average | 0.1787      | 0.4118         | 0.153          |   |
|                     | Maximum | 0.38        | 0.57           | 0.2            |   |

Notes:

- 1) Unit abbreviations - mg/L – milligrams per liter, µg/L – micrograms per liter
- 2) ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.

Based on the results of **Table 2**, boron and molybdenum appear to be the best indicator parameters for impacts from the LCPA because they have a much higher concentration in the CCR porewater than the background concentrations and are non-reactive and highly mobile at the site. Sulfate, which is typically a good CCR indicator parameter may not be as useful at the LEC, since sulfate values within the Missouri River are close in concentration to those within the CCR Unit. Therefore, samples collected closer to the Missouri River may have higher sulfate values, caused by temporary recharge to the aquifer from the Missouri River instead of impacts from the CCR. Fluoride can also be a good indicator, however, porewater concentrations are not significantly higher than background, and therefore it would be difficult to detect impacts using fluoride concentrations.

Average lithium concentrations in the porewater are also not significantly elevated when compared to background groundwater samples or the Missouri River, therefore determining the source of impacts would be difficult.

Potassium and sodium are also not ideal indicators as many of the wells onsite are either near roadways or

located within the many agricultural fields around the plant, which may display elevated concentrations caused from anthropogenic sources (road salt, fertilizers, etc.).

Boron and molybdenum concentrations are above background concentrations at 7 of the 9 monitoring wells used for Detection and Assessment monitoring wells adjacent to the LCPA (WSP 2023). Therefore, boron and molybdenum appear to be the best indicator parameters for CCR impacts at the LEC. However, though molybdenum appears to be a good indicator, it may not be present at the furthest extents of the plume. Therefore, boron appears to be the best indicator parameter for CCR impacts at the LEC.

## 4.0 EVALUATION OF STATISTICAL EXCEEDANCE FOR RADIUM AT TP-1D

An initial ASD for radium at TP-1D was completed in November 2021 for the February/April 2021 sampling event. This evaluation determined that the statistical exceedance of radium at TP-1D was not caused by impacts from the LCPA, but rather a result of naturally occurring geochemical variability within the alluvial aquifer. This conclusion was supported by several factors including: (1) absence of key CCR indicators (boron, sulfate, and molybdenum) in monitoring well TP-1D, (2) a stable geochemical fingerprint in TP-1D, which closely resembles that of background wells BMW-1D and BMW-2D, which are located approximately 1.5 miles upgradient of the LCPA, (3) lack of radium in monitoring wells immediately adjacent to the LCPA, (4) similarity in radium concentrations between TP-1D and background monitoring well BMW-1D, (5) radium is a naturally occurring element in soils and alluvial aquifer sediments that are derived from igneous rocks within the Missouri River watershed, and (6) the Ozark Aquifer, which discharges into the Missouri River Alluvium, is known to have elevated radium concentrations. A copy of the ASD report for the February/April 2021 sampling event is provided in Appendix E of the 2021 LCPA Annual Groundwater Monitoring and Corrective Action Report.

### 4.1 October 2022 Sampling Event

There have been no significant changes in the six lines of evidence (LOE) presented in the February/April 2021 sampling event ASD as summarized in Section 4.0 for radium at TP-1D. TP-1D was installed in June 2018 as a part of the nature and extent evaluation completed under Assessment Monitoring and is used as a Corrective Action Monitoring Well. As displayed in **Figure 1**, TP-1D is located approximately 10,000 feet to the northeast of the LCPA and is not impacted by the LCPA. The following reviews each of the LOEs demonstrating the statistical exceedance from radium is still the result of an alternative source, incorporating the data from the April 2022 sampling event.

- **LOE 1 - A lack of key CCR indicators (boron, sulfate, and molybdenum) in monitoring well TP-1D when compared to background monitoring wells and those adjacent to the LCPA.**

A review of key CCR indicators including boron, sulfate, and molybdenum at TP-1D displays that concentrations at TP-1D are within the same range of concentrations reported for background monitoring wells BMW-1D and BMW-2D, and thus are not statistically elevated compared to background wells. Figures with updated timeseries plots including data through the October 2022 sampling event are provided in **Figure 2-4** for these key constituents.

- **LOE 2 - A stable geochemical fingerprint in TP-1D, which closely resembles that of background wells BMW-1D and BMW-2D approximately 1.5 miles upgradient of the LCPA.**

**Figure 5** displays a piper diagram that demonstrates that TP-1D data continue to plot in the area of background groundwater and thus the recent statistical exceedance over the GWPS for radium is not a result of influence from the LCPA.

- **LOE 3 & 4 - Lack of radium in monitoring wells immediately adjacent to the LCPA as well as similarities in radium concentrations between TP-1D and background monitoring well BMW-1D.**

Radium concentrations have been evaluated from the monitoring well network adjacent to the LCPA used for Detection and Assessment Monitoring since 2016. **Figure 6** displays a box and whisker plot of radium concentrations since the start of CCR monitoring at TP-1D (November 2018) for background monitoring wells

(BMW-1D and BMW-2D), TP-1D, and the LCPA Detection/Assessment Monitoring Well Network. As shown in **Figure 6** and **Figure 7**, radium concentrations at TP-1D are most similar to background well BMW-1D and are higher than the concentrations in monitoring wells located immediately adjacent to the LCPA. Additionally, it should be noted that radium has not been present at an SSL (Statistically Significant Level) in the Assessment Monitoring Well Network. If elevated impacts for radium were caused by the LCPA, it would be expected that the wells immediately adjacent to the LCPA would show elevated concentrations, like those reported for boron, sulfate, and molybdenum.

■ **LOE 5 & 6 - Radium is a naturally occurring element in soils and alluvial aquifer sediments that are derived from igneous rocks within the Missouri River watershed and the Ozark Aquifer, which discharges into the Missouri River Alluvium and is known for higher radium concentrations.**

No new information is available since the February/April 2021 sampling event ASD was prepared. Radium is a natural breakdown product of the radioactive decay of uranium, and both radium and uranium are known to naturally occur within the Missouri River Alluvial Aquifer from the igneous source rocks that comprise the sediments from upgradient locations along the Missouri River and from discharges from the Ozark Aquifer into the alluvial deposits (Herrmann et al., 2022, Imes and Emmett, 1994, Kleeschulte, 1993, and USGS, 2014).

The Ozark Aquifer is a regional aquifer that is present south of the Missouri River and West of the Mississippi River in the southern parts of Missouri, eastern Kansas, and northern Arkansas. The aquifer is made up mostly of carbonate rocks that are Cambrian through Mississippian in age. The discharges for the Ozark Aquifer in Missouri are the Missouri River to the north and the Mississippi River to the east. In 2012, the United States Geological Survey completed a nationwide study on radium within groundwater aquifers and found that the Mid-Continent and the Ozark Aquifers had the highest average radium concentrations (Szabo et al., 2012), with more than 20% of the samples included in the study had radium concentrations above the MCL of 5 pCi/L. TP-1D is in the deep zone of the alluvial aquifer, and is situated such that discharges from the Ozark Aquifer may be contributing to the increased radium  $^{226} + 228$  at this location.

Additionally, the Missouri River Alluvial Aquifer is comprised of alluvial deposits from the Missouri River basin, which encompasses a vast area of the United States including parts of Missouri, Iowa, Kansas, Nebraska, South Dakota, North Dakota, Montana, Wyoming, and Colorado. The sediments in the Missouri River Alluvial Aquifer at the site are made up of a mixture of sediments from all reaches of the Missouri River Basin. Uranium deposits and many igneous rocks containing uranium occur at numerous locations within the Missouri River Basin. Therefore, the alluvial aquifer sediments in the vicinity of TP-1D (as well as background well BMW-1D) likely include naturally occurring uranium-containing deposits which are resulting in the radium concentrations measured at these locations.

In summary, based on the information presented in this ASD, the statistical exceedance for radium in TP-1D is not a result of impacts from the LCPA, but is the result of natural geochemical variability within the alluvial aquifer.

## 5.0 EVALUATION OF STATISTICAL EXCEEDANCE FOR LITHIUM AT LMW-7S

As indicated in **Tables 1** and **2**, lithium can be a key indicator for fly ash and boiler slag/bottom ash impacts if it is present at elevated levels in the CCR porewater compared to background and is mobile at the site. However, as discussed in Section 3.2, boron and molybdenum are better indicator parameters than lithium for the LEC, as most porewater samples are not significantly higher than background or Missouri River concentrations. Four of the six CCR porewater samples collected in 2018 as a part of the LCPB ASD (available in the 2018 Annual Report for the LCPB, Golder 2019b) have lithium concentrations below the site-specific GWPS for lithium (47.4  $\mu\text{g/L}$ ). Additionally, lithium concentrations in the monitoring wells adjacent to the LCPA used for Assessment Monitoring (UMW-1D through UMW-9D) range from Non-Detect (ND)  $<10 - 39.3 \mu\text{g/L}$ , while background values range from 11.5 – 47.4  $\mu\text{g/L}$  and Missouri River samples range from 34.2 – 42.8  $\mu\text{g/L}$ . This further establishes that lithium is not a useful CCR impact indicator parameter for the LCPA and the LEC area.

**Table 3** displays results from the October 2022 sampling event for lithium, boron, and molybdenum at LMW-7S.

**Table 3 – October 2022 Analytical Results of Key Constituents at LMW-7S**

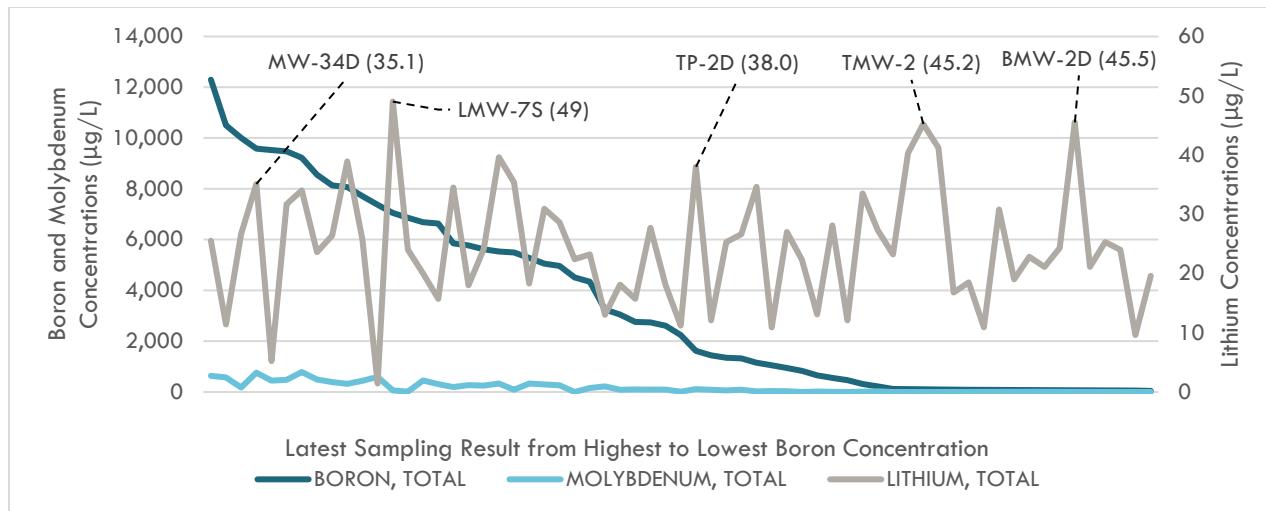

| Well ID | Lithium (µg/L) | Boron (µg/L) | Molybdenum (µg/L) |
|---------|----------------|--------------|-------------------|
| LMW-7S  | 49.0           | 7,050        | 59.7              |

Notes:

- 1) µg/L – micrograms per liter.

To evaluate the correlation between key CCR indicators and lithium concentrations onsite, a graph that displays boron, lithium and molybdenum concentrations from the most recent sampling result at each monitoring well is provided in **Figure 8** (data used for **Figure 8** provided in **Table 4**). As displayed on the graph, molybdenum concentrations appear to correlate with boron concentrations, with elevated levels at similar monitoring wells. Lithium concentrations do not track with either boron or molybdenum concentrations, indicating that lithium concentrations are not linked to impacts from the LCPA.

**Figure 8 – Comparison of Most Recent Boron, Molybdenum, and Lithium Concentrations**

Notes:

- 1) µg/L – micrograms per liter.
- 2) Values displayed in order from highest to lowest boron concentrations. Data used to prepare **Figure 7** are provided in **Table 4**.
- 3) Lithium concentrations displayed on secondary axis, with values on the right side of the graph.

As displayed in **Table 4**, there are 15 monitoring wells onsite where boron and/or molybdenum concentrations are below background and 48 monitoring wells onsite where boron and/or molybdenum are above background concentrations. **Figure 9** displays the distribution of lithium concentrations for the following datasets: 1) monitoring wells where there is a corresponding molybdenum and/or boron exceedance (48 monitoring wells, 399 Total Results) and 2) monitoring wells where there is not a corresponding boron or molybdenum exceedance (15 monitoring wells, 160 Total Results). For this figure, historical datasets for each monitoring well were used to generate the distributions. The results of this box and whisker plot display a nearly identical distribution between the two datasets including lower quartile, median, average, and upper quartile values all within 4 µg/L of one another. This further demonstrates that lithium concentrations do not correlate with key CCR indicator parameters, and therefore, elevated lithium concentrations onsite are not related to CCR impacts.

Using the data identified in **Figure 9**, for those wells without a boron or molybdenum exceedance above background, a non-parametric (highest value in the dataset) upper prediction limit of 57.5 µg/L was calculated, which is higher than the current Site GWPS of 47.4 µg/L.

### 5.1.1 Sequential Extraction Data Confirms Presence of Naturally Occurring Lithium in Alluvial Sediments

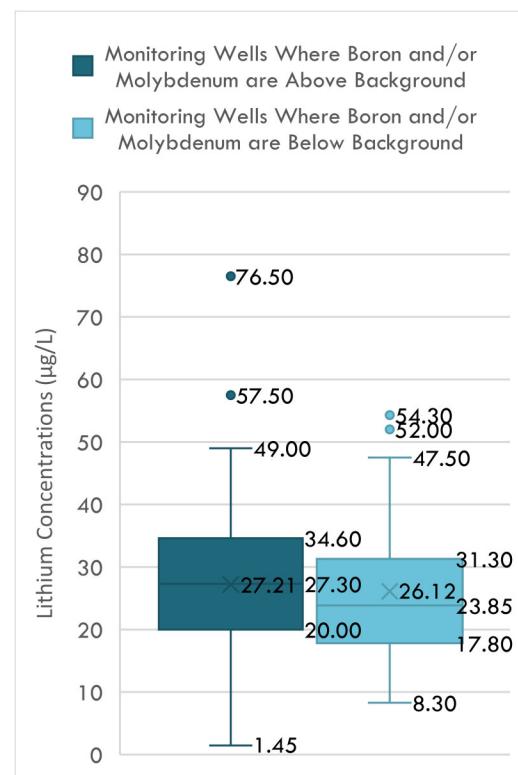

A seven-step sequential extraction method (SEP) based on Tessier et al. (1979) was used to identify the provenance of lithium in soils (i.e., the operationally defined fraction that contains the metal) and determine potential environmental mobility. The total concentration of a metal measured from all seven steps can be compared to the concentration determined from the total metal analysis for compositional accountability. The seven-step SEP is defined by specific extraction steps as follows (based on a modified Tessier et al. 1979 method):

**Figure 10 – Sequential Extraction Procedure**

| SEQUENTIAL EXTRACTION PROCEDURE                        |   |
|--|---|
| ENVIRONMENTALLY AVAILABLE<br>↑ Increasing Availability | Step 1<br>Exchangeable Fraction:<br>This extraction includes trace elements that are electrostatically adsorbed to overburden minerals  |
|  | Step 2<br>Carbonate Fraction:<br>This extraction targets trace elements that are adsorbed or otherwise bound to carbonate minerals  |
|  | Step 3<br>Non-Crystalline Materials Fraction:<br>This extraction targets trace elements that are complexed by amorphous minerals  |

Results of the sequential extraction testing as displayed in **Figure 11** indicate the presence of naturally occurring lithium in soils at the LEC in fractions 6 and 7 in each of the soil borings, regardless of if the locations were

**Figure 9 – Distribution of Lithium Concentrations in Monitoring Wells With and Without Key CCR Indicators**

directly adjacent to the LCPA or at background locations. Lithium is reported in soils at concentrations ranging from 2.8 to 16.2 milligrams per kilogram (mg/kg, from the SEP) and is predominantly (83 to 92%) present in the residual and sulfide component of the soil, i.e., the non-environmentally-available fractions. The absence of lithium in the environmentally available fractions (specifically exchangeable and carbonate fractions) indicates a general lack of lithium transport and attenuation (e.g., through sorption and/or co-precipitation).

**Figure 11 - Sequential Extraction of Lithium Results**

Notes:

- 1) Detection with JB flags for the organic phase were not used for this evaluation, as these results were detected in the blank, are estimated, and are therefore not considered accurate for this evaluation.
- 2) Mg/kg – milligrams per kilogram.
- 3) Sample locations provided in **Figure 1**. BH-01 is near the background wells, BH-02 is just south of the LCPA CCR Unit and BH-03 is located near AM-1S and the Missouri River.

### 5.1.2 Lithium at LMW-7S

LMW-7S is located approximately 1,300 feet to the northeast of the LCPA, near the eastern perimeter of the LCPB. Boron and molybdenum concentrations have historically been elevated at LMW-7S. LMW-7S was installed in 2016 to monitor the LCPB, and since that time lithium concentrations have ranged from 25.6 to 49.0 µg/L. During the statistical evaluation of the October 2022 sampling event (which only uses data collected since April 2020), a LCL of 39.9 µg/L and UCL of 47.93 µg/L were calculated for lithium. Therefore, the UCL is only 0.93 µg/L above the Site GWPS. This UCL is below the calculated limit using monitoring wells with no boron and/or molybdenum impacts of 57.5 µg/L. The lack of elevated lithium when compared with non-impacted wells, coupled with the clear indications that lithium concentrations are not correlated with CCR impacts, indicates that the elevated lithium at LMW-7S is not from the LCPA, but rather is naturally occurring in the alluvial aquifer at this location.

### 5.1.3 Naturally Occurring Lithium Values at the SEC are Consistent with Upstream Sampling Results within the Missouri and Mississippi River Alluvial Aquifers

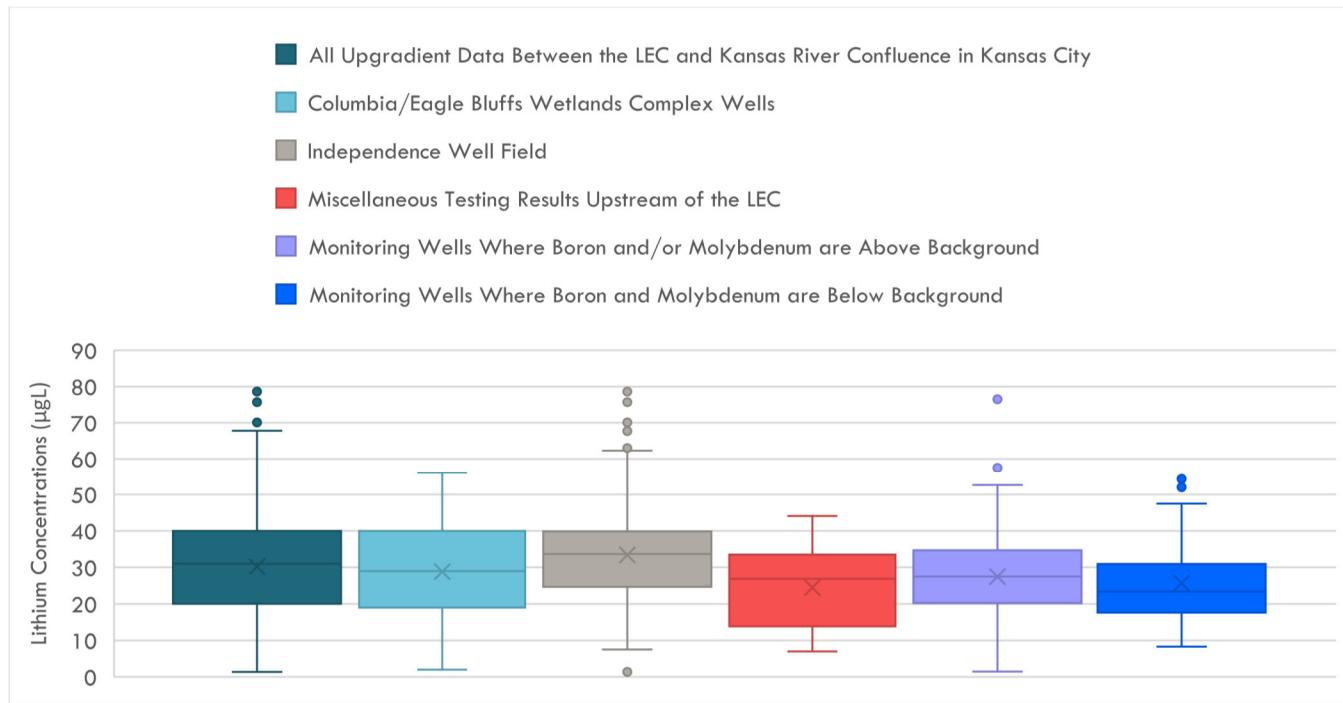

Naturally occurring lithium is present in groundwater across the United States (US), can be found in nearly all rock and soil types, and is most commonly found to be associated with silicate minerals (Tomazscak 2015). The weathering of silicate minerals is known to cause the release of naturally occurring lithium into groundwater (Tomazscak 2015). Site-specific test results (i.e., SEP results) confirm this finding for the LEC.

The National Water Quality Monitoring Council's (NWQMC) Water Quality Portal (available at <https://www.waterqualitydata.us/>) summarizes data from the USGS, the USEPA, and the NWQMC databases. A review of lithium results from within the Missouri Alluvial Aquifer from the NWQMC database includes lithium results from a total of 1,325 groundwater sample results for wells located upgradient of the LEC within the Missouri River alluvial aquifer in the state of Missouri. To evaluate naturally occurring Missouri River Alluvial Aquifer concentrations of lithium, the database results were divided different groups as follows:

- Independence Well Field near Independence, Missouri (Kelly 2010) – Total of 433 results.
- Columbia/Eagle Bluffs Wetland Complex Wells (Richards 1995, Richards 1999, Richards, 2002) – Total of 851 results.
- Miscellaneous testing results upstream of the LEC – Total of 41 results

**Figure 12** displays a box and whisker plot that compares the publicly available groundwater lithium concentration data in the upgradient alluvial aquifers to lithium concentrations at SEC as displayed in **Figure 9**.

**Figure 12 – Comparison of Missouri River Alluvial Aquifer Groundwater Lithium Concentrations – Public Data and LEC Results**

Notes:

1) µg/L – micrograms per liter

Overall, the results display a very similar distribution of lithium results across the state within the Missouri River Alluvium. In fact, lithium concentrations appear to be lower, on average, than those in Independence,

Columbia/Eagle Bluffs, as well as other miscellaneous upstream locations. This consistency with upgradient alluvial aquifer samples demonstrates that the lithium concentrations onsite are not from the LCPA, but rather are naturally occurring within the alluvial aquifer.

## 6.0 STATISTICAL EXCEEDANCE FOR COBALT AT AM-1S

Cobalt is present at a level that is statistically above the Site Specific GWPS of 6 µg/L using corrective action statistical evaluations at AM-1S. This is the first corrective action sampling event where cobalt at AM-1S is present at a statistical level above the GWPS using Corrective Action statistical methods. AM-1S is located approximately 3,000 feet north of the LCPA, adjacent to the Missouri River. As displayed in **Table 5**, boron is present at AM-1S at a concentration just above background, while molybdenum is not detected, and is present below background concentrations.

**Table 5 – October 2022 Analytical Results of Key Constituents at AM-1S**

| Well ID | Cobalt (µg/L) | Boron (µg/L) | Molybdenum (µg/L)  |
|---------|---------------|--------------|--------------------|
| AM-1S   | 3.5 J         | 316          | Non-Detect (<20.0) |

Notes:

1) µg/L – micrograms per liter

As displayed on **Table 1**, cobalt is not typically considered a key CCR indicator parameter because it is usually present at a low concentration in CCR leachate relative to typical background, has low mobility, and has a higher potential for reactivity (EPRI 2017). Since AM-1S well installation in 2018, cobalt concentrations have ranged between 3.2 µg/L and 5.8 µg/L at AM-1S, with all results being below the Site GWPS. Based on the results of the October 2022 Corrective Action Statistical Evaluation, cobalt was present a level statistically above the GWPS with a LCL of 1.559 µg/L and an UCL of 6.841 µg/L. This evaluation only uses results from the Corrective Action Program sampling, and since April 2020, only 4 sampling results have been collected at AM-1S. If all results (6 total) from AM-1S are used to calculate the upper and lower confidence limits, then AM-1S would be in compliance with the GWPS with a LCL of 1.061 µg/L and an UCL of 5.941 µg/L. However, as prescribed in the Corrective Action Statistical Analysis Plan, only results since the start of Corrective Action monitoring are used for the evaluation, therefore, although no single result has been above the site specific GWPS of 6 µg/L, the UCL is still above the GWPS causing a statistical exceedance using Corrective Action statistical methods.

Provided in **Table 6** is a summary of cobalt minimum, average, and maximum concentrations in the different potential source areas including background, porewater, and Missouri River. As displayed on **Table 6**, concentrations in AM-1S are above those present in background, river, and LCPA porewater.

**Table 6 – Summary of Cobalt Concentrations**

| Constituent (Units) |         | AM-1S | Background | Assessment Monitoring Wells Adjacent to LCPA (UMW 1-9) | Missouri River | LCPA Porewater | LCPB Porewater |
|---------------------|---------|-------|------------|--|----------------|----------------|----------------|
| Cobalt (µg/L)       | Minimum | 3.2   | ND<0.72    | ND <0.72   | ND <1.0        | ND <0.73       | ND <0.87       |
|                     | Average | 4.483 | 0.5504     | 0.4355   | 1.762          | NA             | ND <0.87       |
|                     | Maximum | 5.8   | 1.8        | 0.79   | 4.4            | ND <0.83       | ND <0.87       |

Notes:

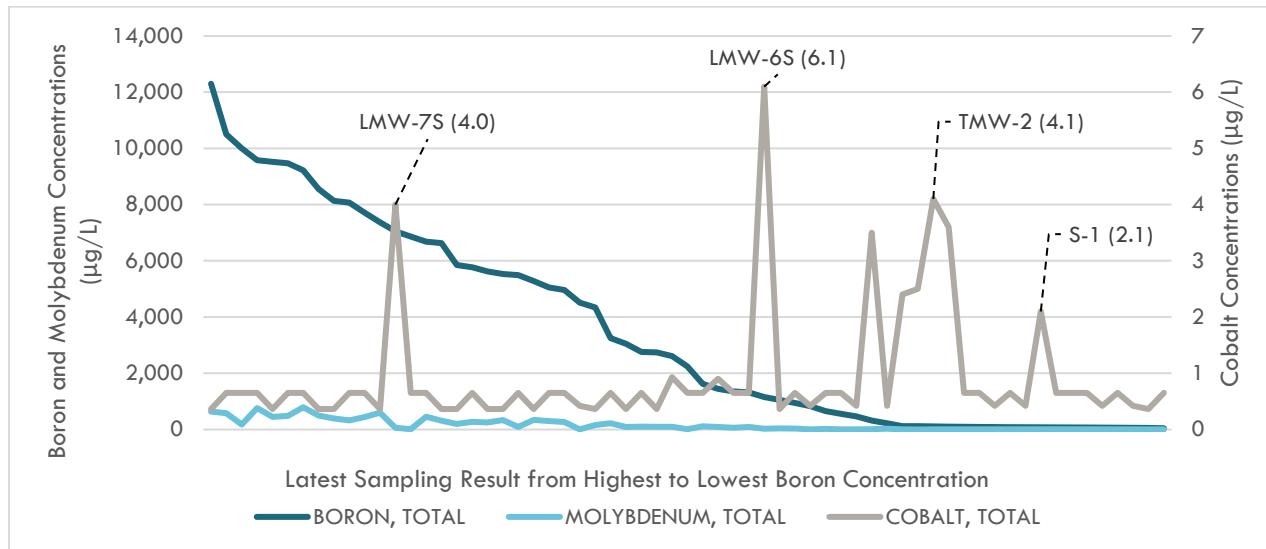

- 1) µg/L – micrograms per liter.
- 2) NA - Not applicable.
- 3) ND – Non-Detect.

In January 2018, as part of the initial LCPB ASD, porewater was sampled in the LCPA and LCPB CCR units. All nine results from this analysis were non-detect (<0.73 to <0.87 µg/L). This lack of cobalt in the CCR materials has been confirmed in other studies as well, including the current NPDES permit (#MO-0004812) where cobalt is not listed as a Pollutant of Concern (POC) since the test result collected from the LCPA outfall is non-detect <1 µg/L. Lack of cobalt within the pore-water of the LCPA, coupled with the lack of cobalt at a statistically significant level above the GWPS in any other monitoring well onsite, indicates that cobalt concentrations in AM-1S are not derived from the LCPA, but rather an alternative source.

Further evidence that the LCPA is not a source of elevated cobalt concentrations is the lack of cobalt in the groundwater monitoring wells directly adjacent to the CCR Unit used for Detection and Assessment Monitoring. These wells (UMW-1D, UMW-2D, UMW-3D, UMW-4D, UMW-5D, UMW-6D, UMW-7D, UMW-8D, and UMW-9D as displayed in **Figure 1**), show elevated key CCR indicator parameter concentrations for boron and molybdenum but do not have elevated cobalt concentrations. Of the 126 testing results for these 9 monitoring wells, only 2 results have a value over the method detection limit (MDL) at 2.7 J<sup>2</sup> and 0.79 J µg/L (still below the Practical Quantitation Limit (PQL)). Therefore, 98.4% of all cobalt results in monitoring wells located directly adjacent to the LCPA are present at a non-detect level.

Concentrations of cobalt do not closely track with key indicator parameters of boron or molybdenum. **Figure 13** is a graph that displays boron, cobalt, and molybdenum concentrations from the most recent sampling result at each monitoring well (data used to generate this graph is available in **Table 4**). Molybdenum concentrations appear to correlate with boron concentrations, with elevated levels at similar monitoring wells. Cobalt concentration do not track closely with either boron or molybdenum concentrations and range between non-detect <0.73 µg/L to 6.9 µg/L.

**Figure 13 – Comparison of Boron, Molybdenum, and Cobalt Concentrations**

Notes:

- 1) µg/L – micrograms per liter.
- 2) Values displayed in order from highest to lowest boron concentrations. Data used to prepare **Figure 7** are provided in **Table 4**.
- 3) Cobalt concentrations displayed on secondary axis, with values on the right side of the graph.

<sup>2</sup> J indicates an estimated value as the result was detected above the MDL but below the PQL. Additionally, the 2.7 J result from 4/11/22 at UMW-1D is considered an outlier using the methods outlined in the sites Statistical Analysis Plan.

As displayed in **Table 4**, there are 15 monitoring wells onsite where boron and molybdenum concentrations are below background and 48 monitoring wells onsite where boron or molybdenum are above background concentrations. **Figure 14** displays the distribution of cobalt concentrations between these two datasets (with and without boron or molybdenum exceedances). For this figure, historical data for each of the wells identified above were used to generate the distribution. The results of this box and whisker plot display a nearly identical distribution between the two datasets. This further demonstrates that cobalt concentrations do not correlate with key CCR indicator parameters, and therefore, elevated cobalt concentrations onsite are naturally occurring and not related to CCR impacts.

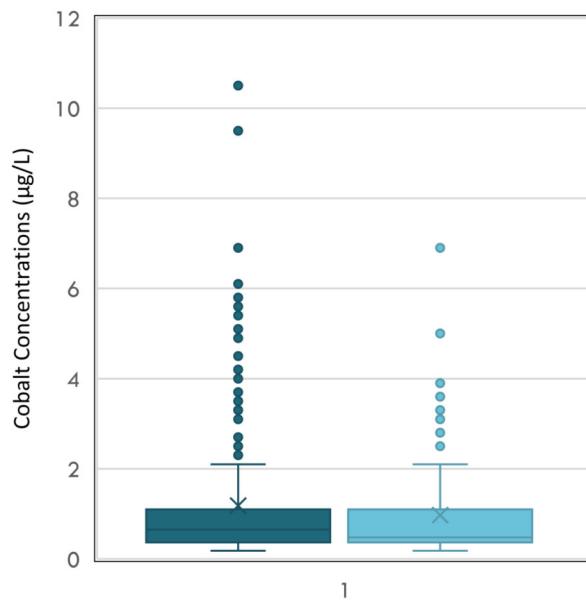

### **6.1.1 Sequential Extraction Data Confirms Presence of Naturally Occurring Cobalt in Sediments**

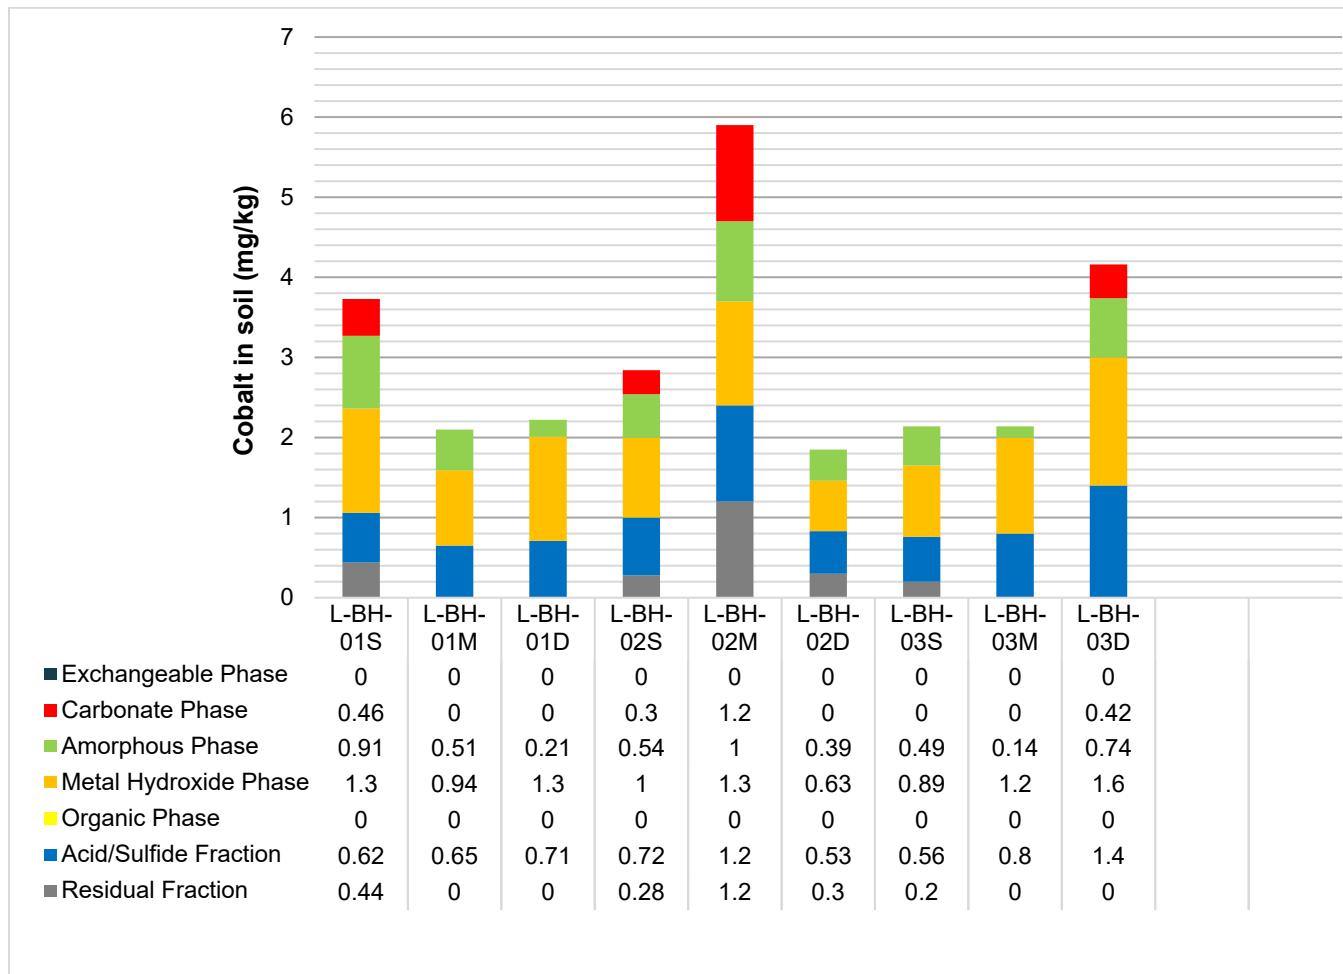

As with lithium, a seven-step sequential extraction method (SEP) based on Tessier et al. (1979) was used to identify the provenance of cobalt in soils (i.e. the operationally-defined fraction that contains the metal) and determine potential environmental mobility. The total concentration of a metal measured from all seven steps can be compared to the concentration determined from the total metal analysis for compositional accountability. The locations of the sequential extraction sample locations are provided in **Figure 1**.

Results of the sequential extraction testing indicate naturally occurring cobalt is present in soils at the LEC in fractions 6 and 7 of each of the soil borings, regardless of if the location is directly adjacent to the LCPA or at background locations. Cobalt is reported at concentrations ranging from 1.8 to 5.9 milligrams per kilogram (mg/kg, from the SEP) and is present in the residual and sulfide component of the soil (28 to 45%), i.e., the non-environmentally available fractions. Background soil samples, outside of the impacts from the LCPA, display similar results as those soil samples collected adjacent to the CCR unit, indicating that cobalt is not from impacts from the CCR Unit, but rather is naturally occurring in the alluvial aquifer.

**Figure 14 – Distribution of Cobalt Concentrations in Monitoring Wells With and Without Key CCR Indicators**

■ Monitoring Wells Where Boron and Molybdenum are Above Background  
■ Monitoring Wells Where Boron and Molybdenum are Below Background

**Figure 15 - Sequential Extraction of Cobalt Results****Notes:**

1) Mg/kg – milligrams per kilogram.

2) Sample locations provided in **Figure 1**. BH-01 is near the background wells, BH-02 is just south of the LCPA CCR Unit and BH-03 is located near AM-1S and the Missouri River.

### *6.1.2 Naturally Occurring Cobalt Values at the LEC are Consistent with Upstream Sampling Results within the Missouri and Mississippi River Alluvial Aquifers*

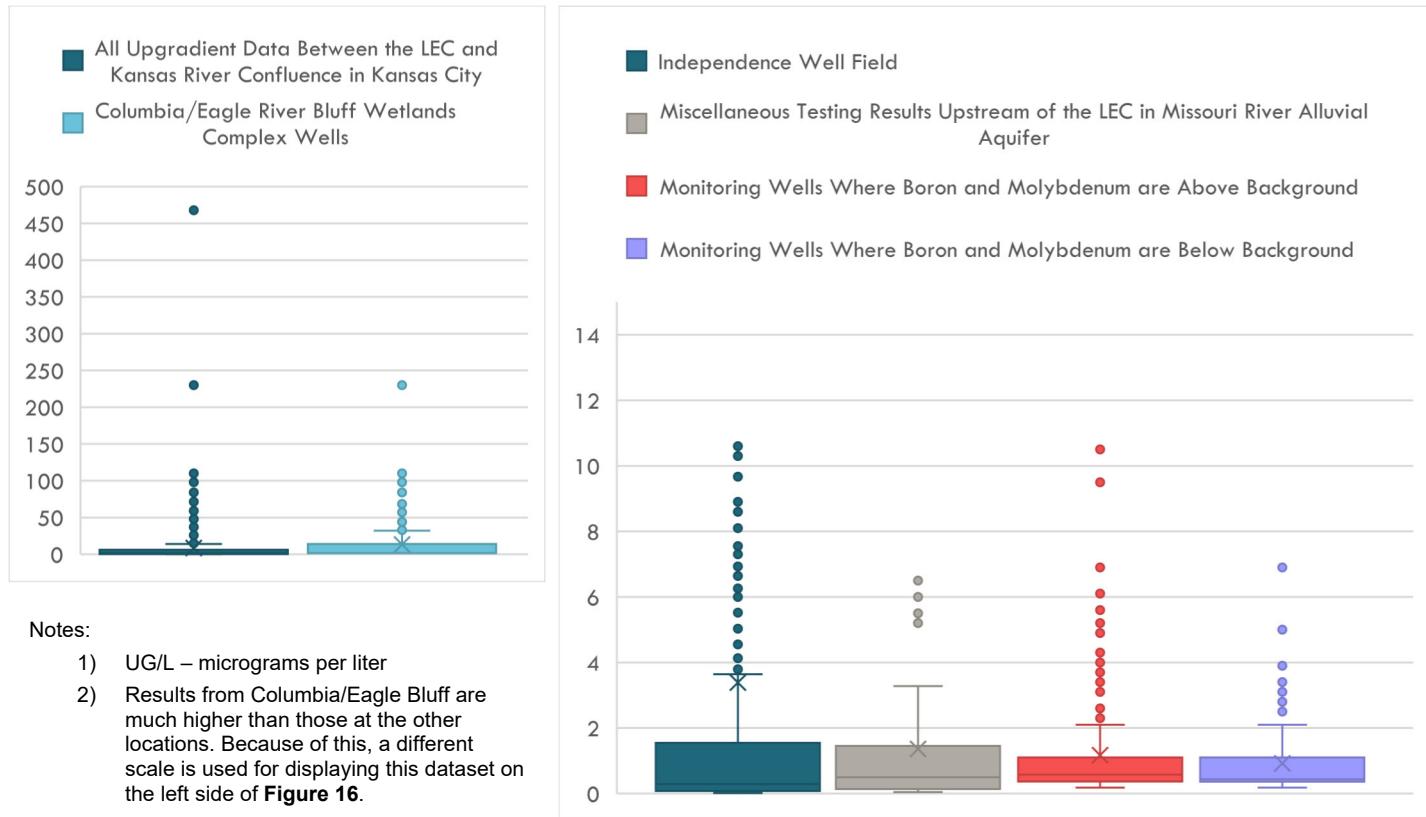

Cobalt may be present in mineral form as a constituent in arsenides, carbonates, sulfides and oxides (Hem, 1989; Smith and Carson, 1981). During weathering of these minerals (i.e., dissolution and/or oxidation), any cobalt is typically released and redistributed to iron or manganese (hydr)oxides (Butt et al., 2000) or other sorbent (e.g., clays, organic matter). The National Water Quality Monitoring Council's (NWQMC) Water Quality Portal (available at <https://www.waterqualitydata.us/>) summarizes data from the USGS, the USEPA, and the NWQMC databases. A review of Cobalt results from within the Missouri River Alluvial Aquifer from the NWQMC database includes Cobalt results from a total of 917 groundwater sample results for wells located upgradient of the LEC within the Missouri River alluvial aquifer in the state of Missouri. To evaluate naturally occurring Missouri River Alluvial Aquifer concentrations of cobalt, the database results were divided different groups as follows:

- Independence Well Field near Independence, Missouri (Kelly 2010) – Total of 406 results.
- Columbia/Eagle Bluffs Wetland Complex Wells (Richards 1995, Richards 1999, Richards, 2002) – Total of 470 results.

- Miscellaneous testing results upstream of the LEC – Total of 41 results.

**Figure 16** displays a box and whisker plot that compares the publicly available groundwater cobalt data in the upgradient alluvial aquifers to those completed onsite as displayed in **Figure 13**.

#### Figure 16 – Comparison of Missouri River Alluvial Aquifer Groundwater Cobalt Concentrations – Public Data and LEC Results

The cobalt concentrations from the Columbia/Eagle Bluffs Welands complex are much higher than those at the SEC and those further upgradient at the Independence Well Field. It is unknown why these results are at such elevated concentrations, therefore, they are not used for this evaluation. Excluding the data from Columbia/Eagle Bluffs Welands complex, the results display that the majority of cobalt concentrations across the Missouri River alluvial aquifer are below 4 µg/L with some outliers above 6 µg/L at each site. This is likely caused by the heterogeneous nature of the Missouri River Basin alluvial aquifer deposits, which are derived from a vast area of the United States including parts of Missouri, Iowa, Kansas, Nebraska, South Dakota, North Dakota, Montana, Wyoming, and Colorado. The sediments in the Missouri River Alluvial Aquifer at the site are made up of a mixture of sediments from all reaches of the Missouri River Basin. Cobalt deposits and many metamorphic and igneous rocks containing cobalt occur at numerous locations within the Missouri River Basin. Therefore, the alluvial aquifer sediments in the vicinity of AM-1S (as well as other various locations within the Missouri River Alluvium) likely include localized zones/particles of increased cobalt concentrations and most likely the cause of the elevated concentrations observed at the LEC.

This consistency with upgradient alluvial aquifer samples displays that the cobalt concentrations onsite are not from the LCPA, but rather are naturally occurring levels that can vary over time within the aquifer groundwater.

## 7.0 SUMMARY

Based on the information presented in this ASD, the statistical exceedances for radium, lithium and cobalt at the site using Corrective Action statistical methods are not the result of impacts from the LCPA, but instead are the result of natural geochemical variability of groundwater within the alluvial aquifer at the site. The natural geochemical source for radium, lithium, and cobalt exceedances is supported by several factors including: (1) a lack of correlation between key CCR indicators (boron and molybdenum) and isolated exceedances, (2) the presence of lithium and cobalt at similar levels in alluvial aquifer samples upgradient of the site, (3) radium, cobalt, and lithium are naturally occurring elements in soils and alluvial aquifer sediments that are derived from igneous rocks within the Missouri River watershed.

## Notes

- 1)  $\mu\text{g/L}$  – Micrograms per liter.
  - 2) UPL – Upper Prediction Limit.
  - 3) The UPL for background monitoring wells BMW-1D and BMW-2D is set at the Double Quantification Rule (DQR) because the entire background dataset is reported as non-detect or estimated (J-flag). In this case the DQR can be numerically represented as the practical quantitation limit (PQL).
  - 4) PQL – Practical Quantitation Limit is the minimum concentration of an analyte (substance) that can be measured with a high degree of confidence that the analyte is present at or above that concentration (typically 5-10x higher than the MDL). In this case, 100  $\mu\text{g/L}$  is the general PQL for boron.

## 1.0 CERTIFICATION STATEMENT

This *LCPA Corrective Action – Alternative Source Demonstration for Cobalt and Lithium Detection in Isolated Wells, Labadie Energy Center, Franklin County, Missouri, USA* has been prepared to comply with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule under the direction of a licensed professional engineer with Rocksmith Geoengineering, LLC.

I hereby certify that this *LCPA Corrective Action – Alternative Source Demonstration for Cobalt and Lithium Detection in Isolated Wells, Labadie Energy Center, Franklin County, Missouri, USA* located at 226 Labadie Power Plant Road, Labadie Missouri 63055 has been prepared to meet the requirements of 40 CFR §257.98(a)(1)(i) and 257.95(g)(3)(ii).

**Rocksmith Geoengineering, LLC**

Mark Haddock, P.E., R.G.  
Principal Engineer, Senior Partner

## 2.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule (CCR Rule or The Rule), this LCPA Corrective Action – Alternative Source Demonstration has been prepared to document an Alternative Source Demonstration (ASD) for a statistical exceedance of the Groundwater Protection Standard (GWPS) calculated for Ameren Missouri's (Ameren) Labadie Energy Center (LEC) Bottom Ash Surface Impoundment (referred to as the LCPA) Corrective Action Monitoring Well Network. This document satisfies the requirements of §257.98(a)(1)(i) and §257.95(g)(3)(ii), which state that at a minimum, the Corrective Action program must meet that of the Assessment Monitoring Program under §257.95, The Assessment Monitoring Program allows the owner or operator to demonstrate that a source other than the CCR Unit has caused a constituent to be at a statistical level exceeding the GWPS, and that the statistical exceedance was the result of an alternative source or resulted from errors in sampling, analysis, statistical evaluation, or natural variation in groundwater quality.

## 3.0 SITE DESCRIPTION AND BACKGROUND

The LEC is located approximately 35 miles west of downtown St. Louis in Franklin County, Missouri, just south of the Missouri River. **Figure 1** depicts the site location and layout, including the location of LCPA, LCPB and the LCL1 CCR Units. The LEC encompasses approximately 2,400 acres and is located within the Missouri River Valley. The facility is bounded to the north by the Missouri River, to the west by Labadie Creek, to the northeast and east by agricultural land, and to the south by a railroad line and bedrock bluffs.

### 3.1 Geological and Hydrogeological Setting

The site lies in an agricultural area called the Labadie bottoms that is between the Missouri River (to the north) and bedrock bluffs (to the south). Flow and deposition from the Missouri River have resulted in thick alluvial deposits that lie on top of bedrock. These alluvial deposits, which can range from approximately 90 to 120 feet thick, comprise the uppermost aquifer. Overall, this alluvial aquifer is described as a fining-upwards sequence of stratified sands and gravels with varying amounts of silts and clays. Based on drilling records, the alluvial aquifer is divided into sub-units, including floodplain deposits, natural levee deposits, and channel deposits along with volumetrically less important loess deposits. Grain sizes of these alluvial deposits are variable.

Beneath the alluvial aquifer lies the bedrock aquifer. Bedrock in this region consists of Ordovician-aged rock. Formations include primarily limestone, dolomite, sandstone, and shale and are comprised of the Plattin Group, Joachim Dolomite, St. Peter Sandstone, Powell Dolomite, and the Cotter/Jefferson City Dolomites.

### 3.2 Coal Combustion Residuals (CCR) LCPA Surface Impoundment

The LCPA is in the floodplain of the Missouri River to the south of the LEC generating plant and is constructed with perimeter berms at an elevation of approximately 494 feet above mean sea level (feet MSL), which is above the 100-year flood elevation of 484 feet MSL. Both fly ash and bottom ash have been historically managed and stored in this surface impoundment. Construction drawings indicate that in the deepest portions of the CCR Unit the base depth of CCR extends down approximately 90 feet to an elevation of approximately 400 feet MSL. Directly to the east of the LCPA are two additional CCR Units, the fly ash surface impoundment (LCPB) and the Utility Waste Landfill (UWL) Cell 1 (LCL1), both of which have berm elevations higher than 488 feet MSL. To the south of the LCPA are lower elevation agricultural fields ranging from approximately 465 to 475 feet MSL which extend to the south to the railroad. South of the railroad, bedrock bluffs rise to an elevation of over 600 feet MSL. The western side of the surface impoundment is bounded by a forested area and Labadie Creek, which flows north to the Missouri River.

### 3.3 Corrective Action Background

On January 9, 2019, Ameren initiated its Corrective Measures Assessment (CMA) and posted the CMA report on May 20, 2019. A public meeting was held on May 29, 2019, and responses to public comments are posted on Ameren's CCR website. On August 30, 2019, Ameren published its "Remedy Selection Report – 40 CFR § 257.97 Rush Island, Labadie, Sioux and Meramec CCR Basins" (Remedy Selection Report) that identified source control through installation of a low permeability cover system and use of Monitored Natural Attenuation (MNA) as its

chosen corrective action remedial plan. The Remedy Selection Report's remedial plan consists of two phases as follows:

- 1) Source control, stabilization, and containment of CCR by installation of a low permeability geomembrane cap (a minimum  $1 \times 10^{-7}$  centimeters per second (cm/sec) versus  $1 \times 10^{-5}$  cm/sec required by the CCR Rule).
- 2) Once source control is achieved, monitor the natural attenuation of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modelling evaluations will document that concentrations are decreasing as modelled. Natural attenuation occurs due to naturally occurring processes within the aquifer.

As required by the CCR Rule, the following were completed within 90 days of selecting the remedy (i.e., November 27, 2019): (1) a groundwater monitoring well system was selected and certified by a Professional Engineer, (2) a Statistical Method Certification was prepared and certified by a Professional Engineer, and (3) a Groundwater Monitoring Plan (GMP) was prepared recording the design, installation, development, sampling procedures, as well as statistical methods, and placed in the owner's operating record. The Corrective Action Monitoring Well Network consists of 22 monitoring wells, installed within the shallow, intermediate, and deep zones of the alluvial aquifer as shown on **Figure 1**.

On September 28, 2019, Ameren commenced Phase 1 by initiating closure at the LCPA. Closure of the LCPA has been completed and the first Corrective Action sampling event associated with Phase 2 of the Corrective Measures Remedial Plan was completed in April 2021. For the most recent statistical evaluation, completed on September 22, 2023, Corrective Action statistical methods were used to determine that the following constituents were present at concentrations exceeding the site specific GWPS as follows:

- Arsenic – at well LMW-2S
- Cobalt – at well AM-1S
- Lithium – at well LMW-7S
- Molybdenum – at wells LMW-2S, LMW-4S, LMW-8S, AM-1D, TP-2D, TP-3D, TP-3M, AMW-8, MW-33D, MW-34D, MW-35D

Radium 226 + 228 at TP-1D was previously identified as an exceedance in the October 2022 corrective action statistical evaluation. It is no longer an exceedance as of May 2023 sampling event since the upper confidence limit is below the GWPS.

## 4.0 EVIDENCE THAT ISOLATED EXCEEDANCES OVER THE GWPS ORIGINATE FROM DIFFERENT SOURCE

Isolated exceedances of the site GWPS using corrective action statistical methods<sup>1</sup> exist for cobalt at monitoring well AM-1S and lithium at LMW-7S. The locations of these monitoring wells are provided in **Figure 1**. For each exceedance, there are several different lines of evidence that indicate that the statistical exceedance(s) over the GWPS at these monitoring wells are not the result of a release from the LCPA, but rather are from an alternative source. The following detail the different lines of evidence that support this ASD:

- A lack of correlation between key CCR indicators (boron and molybdenum) and exceedances of lithium and cobalt.
- The presence of lithium and cobalt at similar concentrations in groundwater samples collected upgradient of the LCPA.

<sup>1</sup> The statistical testing method used to evaluate the Corrective Action monitoring data is the confidence interval method, which is the same method used during Assessment Monitoring, except the null hypothesis for the confidence intervals is reversed. For Corrective Action, the Unified Guidance states that the appropriate null hypothesis is that the groundwater population (mean) exceeds the GWPS for those constituents that exceed the GWPS under Assessment Monitoring program. Therefore, in Corrective Action the Upper Confidence Limit (UCL) is compared to the Groundwater Protection Standard (GWPS) instead of the Lower Confidence Limit (LCL) [as was used during Assessment Monitoring].

- The presence of naturally occurring cobalt and lithium in sediments in background locations at the LCPA.
- Cobalt and lithium are naturally occurring elements in soils and alluvial aquifer sediments that are derived from igneous and metamorphic rocks within the Missouri and Mississippi River watersheds.

## 4.1 CCR Indicators

Several types of CCR by-products are generated by coal-fired power plants. The different types of CCR typically display distinct geochemical signatures and indicator parameters. **Table 1** describes the different types of CCRs and their typical indicator parameters (USEPA 2018, EPRI 2011, EPRI 2012, and EPRI 2017).

**Table 1: Types of CCR and Typical Indicator Parameters**

| Type of CCR                                    | Description of CCR<br>(USEPA 2018)  | Key Indicators<br>(EPRI 2011, 2012, 2017)   |
|--|---|---|
| <b>Fly Ash</b>                                 | Fine grained, powdery material composed mostly of silica made from the burning of finely ground coal in the boiler.   | <ul style="list-style-type: none"> <li>■ Boron</li> <li>■ Molybdenum</li> <li>■ Lithium</li> <li>■ Sulfate</li> <li>■ Bromide</li> <li>■ Potassium</li> <li>■ Sodium</li> <li>■ Fluoride</li> </ul> |
| <b>Boiler Slag / Bottom Ash</b>                | Molten bottom ash from the slag tap and cyclone type furnaces that turns into pellets that have a smooth glassy appearance after quenching with water.  | <ul style="list-style-type: none"> <li>■ Boron</li> <li>■ Molybdenum</li> <li>■ Lithium</li> <li>■ Sulfate</li> <li>■ Bromide</li> <li>■ Potassium</li> <li>■ Sodium</li> <li>■ Fluoride</li> </ul> |
| <b>Flue Gas Desulfurization Material (FGD)</b> | A material leftover from the process of reducing sulfur dioxide emissions from a coal-fired boiler that can be a wet sludge consisting of calcium sulfite or calcium sulfate or a dry powdered material that is a mixture of sulfites and sulfates. | <ul style="list-style-type: none"> <li>■ Sulfate</li> <li>■ Fluoride</li> <li>■ Calcium</li> <li>■ Boron</li> <li>■ Bromide</li> <li>■ Chloride</li> </ul>  |

Notes:

- 1) Fly ash and boiler slag/bottom ash typically have the same indicator parameters.
- 2) Definitions from USEPA website, available at <https://www.epa.gov/coalash/coal-ash-basics>.
- 3) Key indicators from EPRI 2011, 2012, and 2017.

## 4.2 Site Specific Key CCR Indicators

To be a key CCR Indicator parameter for a specific site, a constituent should be present in relatively high concentration in the leachate (CCR porewater) when compared to background or other sources (nearby rivers, etc.), not be a common anthropogenic contaminant, and be mostly non-reactive and mobile in the site's hydrogeological environment (EPRI 2012). In 2012, EPRI investigated which constituents are the best indicator parameters for coal ash impacts as outlined in **Table 1**. Of the key indicators listed in **Table 1** for fly ash and boiler slag/bottom ash, boron, molybdenum, lithium, sulfate, and fluoride are regularly sampled as part of the CCR Rule. Potassium and sodium are sampled periodically for major ion analysis and testing under the CCR Rule and testing for bromide has not been completed at the site.

**Table 2** provides a snapshot of the concentrations present onsite in the background wells, Missouri River, and LCPA porewater for each of the constituents sampled on the key indicator list.

**Table 2 – Summary of Potential CCR Impact Indicator Parameters at the Labadie Energy Center**

| Constituent (Units) |         | Back-ground | Missouri River | LCPA Porewater | Advantages and Caveats as Key Indicator (from EPRI 2012)  |
|---------------------|---------|-------------|----------------|----------------|---|
| Boron (µg/L)        | Minimum | ND (<50)    | 78.7           | 3,360          | Typically present in leachate, non-reactive and mobile in common hydrogeologic environments, and not a common anthropogenic contaminant.  |
|                     | Average | 76.8        | 100.1          | 10,317         |   |
|                     | Maximum | 151         | 123            | 21,700         |   |
| Sulfate (mg/L)      | Minimum | 12.2        | 172            | 254            | Commonly analyzed and very mobile in all hydrogeologic environments. Concentration in impoundment leachate may in some cases be too low relative to background to be useful. Less useful in strongly reducing environments where sulfate can be reduced to hydrogen-sulfide gas.  |
|                     | Average | 43.82       | 192.3          | 275.2          |   |
|                     | Maximum | 246         | 224            | 306            |   |
| Molybdenum (µg/L)   | Minimum | ND (<0.52)  | 2.0            | 83.7           | Most useful for dry-managed coal ash. May be less mobile than boron in some hydrogeologic environments. Concentrations may be too low in impoundment leachate to be useful if background groundwater has detectable concentrations.   |
|                     | Average | 1.626       | 3.165          | 405.3          |   |
|                     | Maximum | 7.0         | 6.2            | 1,430          |   |
| Lithium (µg/L)      | Minimum | 11.5        | 34.2           | 5.5            | Useful for coal ash management sites where the power plant burned bituminous coal. Leachate concentrations are typically low in coal ash derived from subbituminous and lignite coal  |
|                     | Average | 28.57       | 38.36          | 40.28          |   |
|                     | Maximum | 47.4        | 42.8           | 61.4           |   |
| Potassium (µg/L)    | Minimum | 3,690       | Not Sampled    | 3,540          | Commonly analyzed, although may be less mobile than boron and sulfate. Assure that leachate concentration is higher than background and that there are no anthropogenic sources such as agricultural fields where potassium may be applied in fertilizers.  |
|                     | Average | 4,999       |                | 18,040         |   |
|                     | Maximum | 7,530       |                | 42,100         |   |
| Sodium (µg/L)       | Minimum | 3,570       | Not Sampled    | 50,500         | Useful for coal ash management sites where the power plant injects trona or sodium bicarbonate or burned subbituminous coal. Absent dry sorbent injection, leachate concentrations are considerably lower in coal ash derived from bituminous coal, particularly at impoundments. Assure that leachate concentration is higher than background and that there are no anthropogenic sources such as agricultural fields, or major highways in northern climates where sodium may be applied in road salts. |
|                     | Average | 9,966       |                | 66,967         |   |
|                     | Maximum | 24,900      |                | 84,000         |   |
| Fluoride (mg/L)     | Minimum | ND (<0.085) | 0.125          | 0.088          | Mobile and non-reactive in common hydrogeologic environments. Assure that leachate concentration is higher than background.   |
|                     | Average | 0.1746      | 0.4118         | 0.153          |   |
|                     | Maximum | 0.38        | 0.57           | 0.20           |   |

## Notes:

- 1) Unit abbreviations - mg/L – milligrams per liter, µg/L – micrograms per liter
- 2) ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.

Based on the results of **Table 2**, boron and molybdenum appear to be the best indicator parameters for impacts from the LCPA because they have a much higher concentration in the CCR porewater than the background concentrations and are non-reactive and highly mobile at the site. Sulfate, which is typically a good CCR indicator parameter may not be as useful at the LEC, since sulfate values within the Missouri River are close in concentration to those within the CCR Unit. Therefore, samples collected closer to the Missouri River may have higher sulfate values, caused by temporary recharge to the aquifer from the Missouri River instead of impacts from CCR. Fluoride can also be a good indicator, however, porewater concentrations are not significantly higher than background, and therefore it would be difficult to detect impacts using fluoride concentrations. Average lithium concentrations in the porewater are also not significantly elevated when compared to background

groundwater samples or the Missouri River, therefore determining the source of impacts would be difficult. Potassium and sodium are also not ideal indicators as many of the wells onsite are either near roadways or located within the many agricultural fields around the plant, which may display elevated concentrations caused from anthropogenic sources (road salt, fertilizers, etc.).

Boron and molybdenum concentrations are above background concentrations at 7 of the 9 monitoring wells used for Detection and Assessment monitoring wells adjacent to the LCPA (WSP 2023). Therefore, boron and molybdenum appear to be the best indicator parameters for CCR impacts at the LEC. However, though molybdenum appears to be a good indicator, it may not be present at the furthest extents of the plume. Boron appears to be the best indicator parameter for CCR impacts at the LEC.

## 5.0 EVALUATION OF STATISTICAL EXCEEDANCE FOR LITHIUM AT LMW-7S

As indicated in **Tables 1** and **2**, lithium can be a key indicator for fly ash and boiler slag/bottom ash impacts if it is present at elevated levels in the CCR porewater compared to background and is mobile at the site. However, as discussed in Section 4.2, boron and molybdenum are better indicator parameters than lithium for the LEC, as most porewater samples are not significantly higher than background or Missouri River concentrations. Four of the six CCR porewater samples collected in 2018 as a part of the LCPB ASD (available in the 2018 Annual Report for the LCPB, Golder 2019b) have lithium concentrations below the site-specific GWPS for lithium (47.4 µg/L). Additionally, lithium concentrations in the monitoring wells adjacent to the LCPA used for Assessment Monitoring (UMW-1D through UMW-9D) range from Non-Detect (ND) <10 to 39.3 µg/L, while background values range from 11.5 to 47.4 µg/L and Missouri River samples range from 34.2 to 42.8 µg/L. This further establishes that lithium is not a useful CCR impact indicator parameter for the LCPA and the LEC area.

**Table 3** displays results from the May 2023 sampling event for lithium, boron, and molybdenum at LMW-7S.

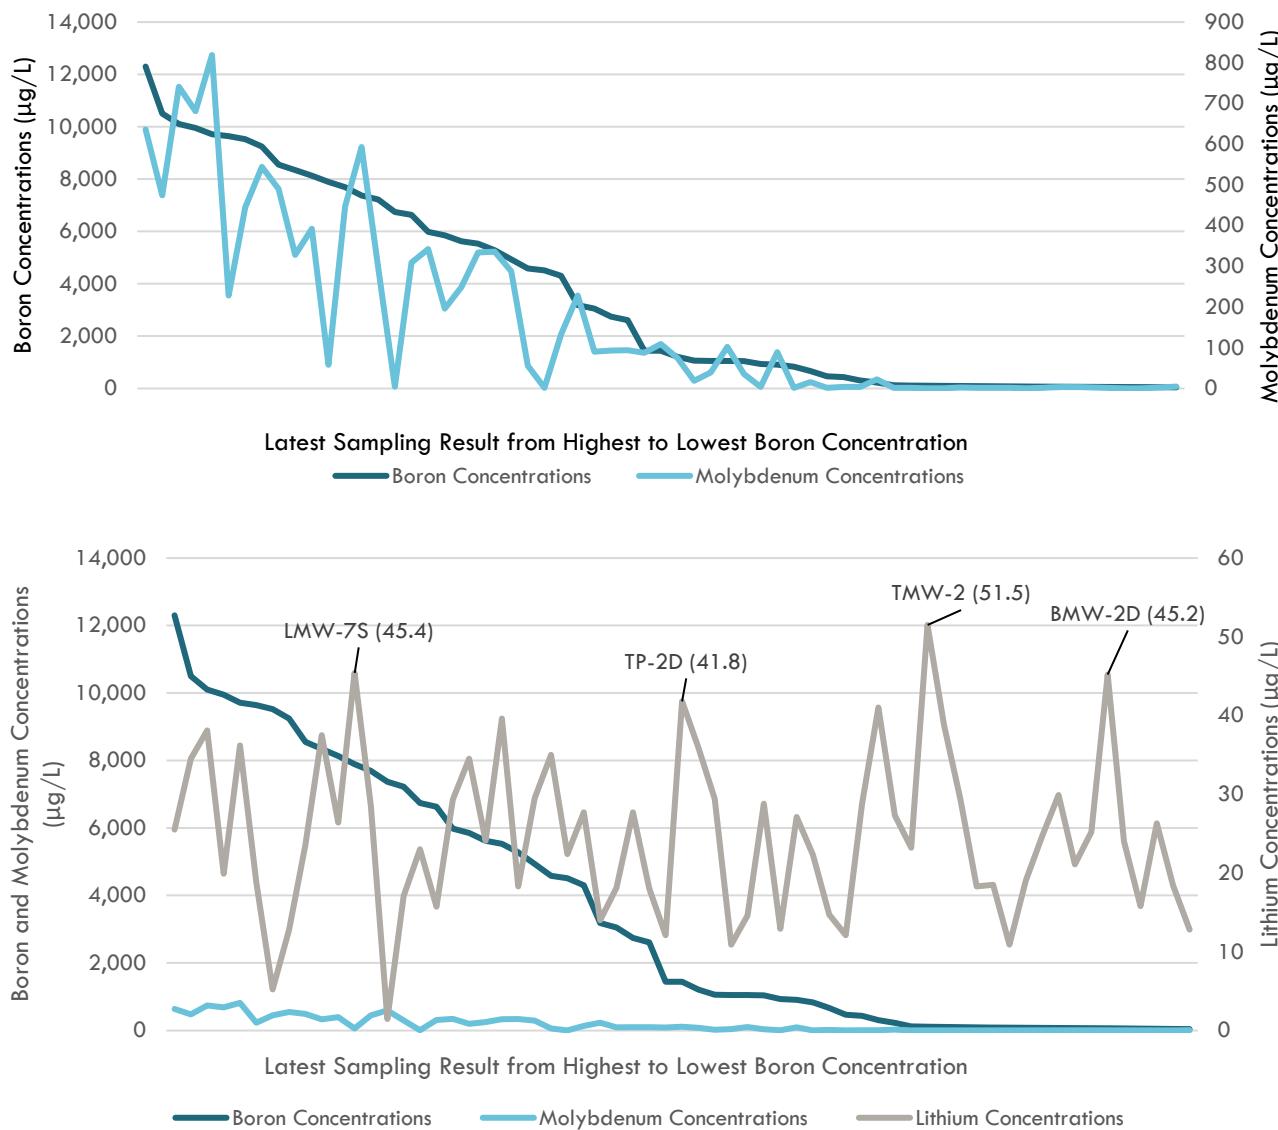

**Table 3 – May 2023 Analytical Results for Key Constituents at LMW-7S**

| Well ID | Lithium (µg/L) | Boron (µg/L) | Molybdenum (µg/L) |
|---------|----------------|--------------|-------------------|
| LMW-7S  | 45.4           | 7,890        | 58.0              |

Notes:

1) µg/L – micrograms per liter.

To evaluate the correlation between key CCR indicators and lithium concentrations onsite, a graph that displays boron, lithium and molybdenum concentrations from the most recent sampling result at each monitoring well is provided in **Figure 2** (data used for **Figure 2** provided in **Table 4**). As displayed on the graph, molybdenum concentrations appear to correlate with boron concentrations, with elevated levels at similar monitoring wells. Lithium concentrations do not track with either boron or molybdenum concentrations, indicating that lithium concentrations are not linked to impacts from the LCPA.

**Figure 2 – Comparison of Most Recent Boron, Molybdenum, and Lithium Concentrations****Notes:**

- 1)  $\mu\text{g/L}$  – micrograms per liter.
- 2) Values displayed in order from highest to lowest boron concentrations. Data used to prepare **Figure 2** are provided in **Table 4**.
- 3) The upper graph displays boron and molybdenum concentrations, with molybdenum concentrations on the right axis.
- 4) The lower graph displays boron, molybdenum, and lithium concentrations, with lithium concentrations on the right axis.

As displayed in **Table 4**, there are 15 monitoring wells onsite where boron and/or molybdenum concentrations are below background and 48 monitoring wells onsite where boron and/or molybdenum are above background concentrations. **Figure 3** displays the distribution of lithium concentrations for the following datasets: 1) monitoring wells where there is a corresponding molybdenum and/or boron exceedance (48 monitoring wells, 454 total results) and 2) monitoring wells where there is not a corresponding boron or molybdenum exceedance (15 monitoring wells, 184 total results). For this figure, historical datasets for each monitoring well were used to generate the distributions. The results of this box and whisker plot display a nearly identical distribution between the two datasets including lower quartile, median, average, and upper quartile values all within 4  $\mu\text{g/L}$  of one another. This further demonstrates that lithium concentrations do not correlate with key CCR indicator parameters, and therefore, elevated lithium concentrations onsite are not related to CCR impacts.

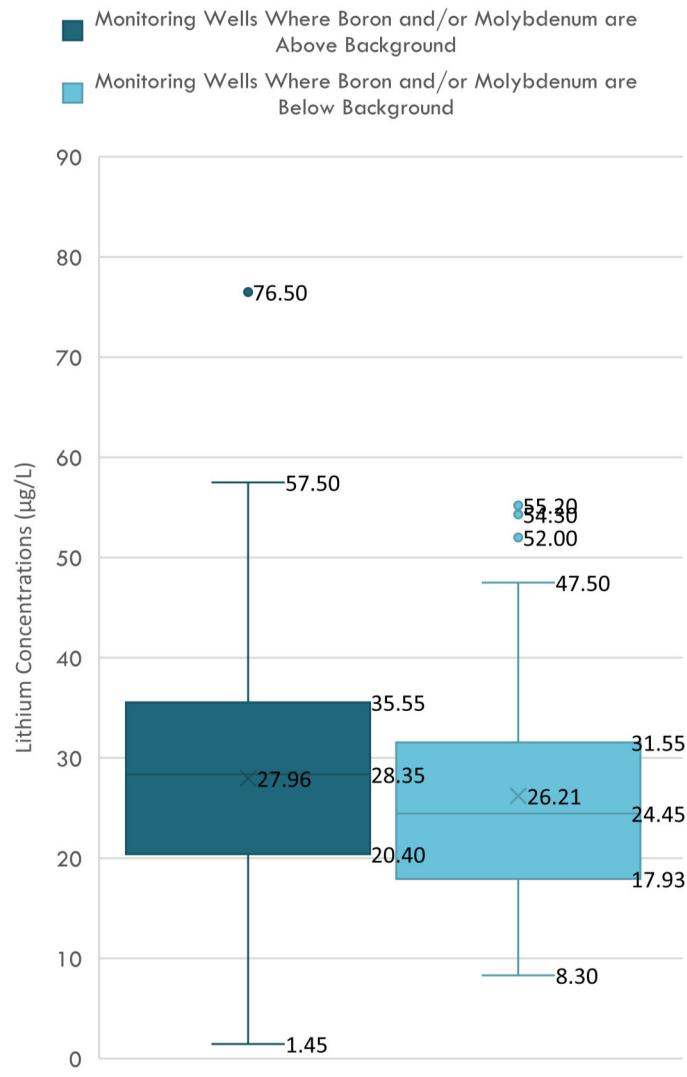

Using the data identified in **Figure 3**, for those wells without a boron or molybdenum exceedance above background, a non-parametric (highest value in the dataset) upper prediction limit of 55.2 µg/L was calculated, which is higher than the current Site GWPS of 47.4 µg/L.

### 5.1.1 Sequential Extraction Data Confirms Presence of Naturally Occurring Lithium in Alluvial Sediments

A seven-step sequential extraction method (SEP) based on Tessier et al. (1979) was used to identify the provenance of lithium in soils (i.e., the operationally defined fraction that contains the metal) and determine potential environmental mobility, as displayed in **Figure 4**. The total concentration of a metal measured from all seven steps can be compared to the concentration determined from the total metal analysis for compositional accountability. The seven-step SEP is defined by specific extraction steps as follows (based on a modified Tessier et al. 1979 method):

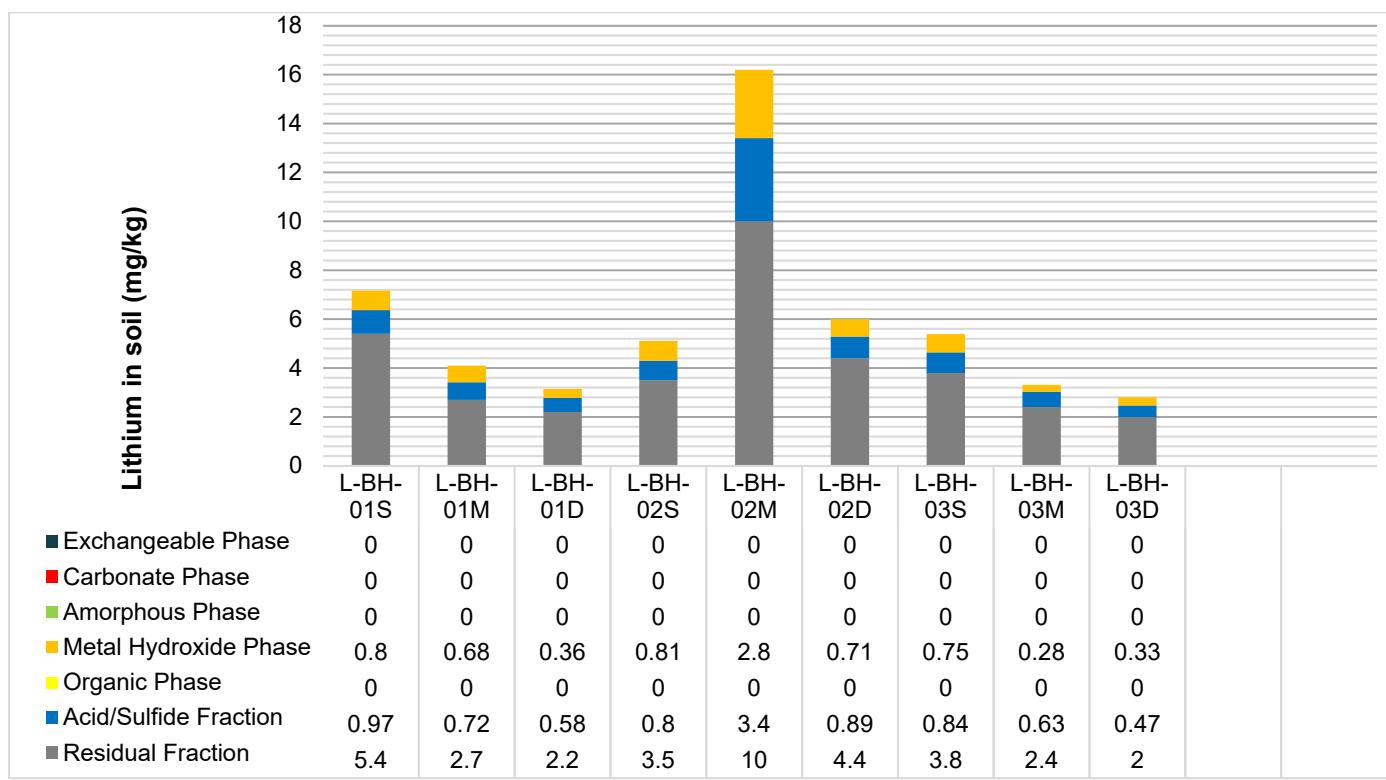

In 2021, samples were collected by Golder from three soil borings across the LEC for sequential extraction testing. The locations of the sequential extraction sample borings are provided in **Figure 1**. Results of the sequential extraction testing are displayed in **Figure 5** and indicate the presence of naturally occurring lithium in soils at the LEC in fractions 6 and 7 in each of the soil borings, regardless of if the locations were directly adjacent to the LCPA or at background locations. Lithium is reported in soils at concentrations ranging from 2.8 to 16.2 milligrams per kilogram (mg/kg, from the SEP) and is predominantly (83 to 92%) present in the residual and sulfide component of the soil, i.e., the non-environmentally available fractions. The absence of lithium in the environmentally available fractions (specifically exchangeable and carbonate fractions) indicates a general lack of lithium transport and attenuation (e.g., through sorption and/or co-precipitation).

**Figure 3 – Distribution of Lithium Concentrations in Monitoring Wells With and Without Key CCR Indicators**

**Figure 4 – Sequential Extraction Procedure**

| SEQUENTIAL EXTRACTION PROCEDURE                            |  |        |   |
|--|--|--------|---|
| ENVIRONMENTALLY AVAILABLE<br>NON-ENVIRONMENTALLY AVAILABLE | Increasing Availability<br>Sequential Extraction Procedure | Step 1 | Exchangeable Fraction:<br>This extraction includes trace elements that are electrostatically adsorbed to overburden minerals  |
|  |  | Step 2 | Carbonate Fraction:<br>This extraction targets trace elements that are adsorbed or otherwise bound to carbonate minerals  |
|  |  | Step 3 | Non-Crystalline Materials Fraction:<br>This extraction targets trace elements that are complexed by amorphous minerals  |
|  |  | Step 4 | Metal Hydroxide Fraction:<br>This extraction targets trace elements bound to hydroxides of iron, manganese, and/or aluminum   |
|  |  | Step 5 | Organic Fraction:<br>This extraction targets trace elements strongly bound via chemisorption to organic material  |
|  |  | Step 6 | Acid/Sulfide Fraction:<br>The extraction is used to identify trace elements precipitated as sulfide minerals  |
|  |  | Step 7 | Residual Fraction:<br>Trace elements remaining in the overburden after the previous extractions will be distributed between silicates, phosphates, and refractory oxide |

**Figure 5 - Sequential Extraction of Lithium Results**

**Notes:**

- 1) Detection with JB flags for the organic phase were not used for this evaluation, as these results were detected in the blank, are estimated, and are therefore not considered accurate for this evaluation.
- 2) Mg/kg – milligrams per kilogram.
- 3) Sample locations provided in **Figure 1**. BH-01 is near the background wells, BH-02 is just south of the LCPA CCR Unit and BH-03 is located near AM-1S and the Missouri River.

### **5.1.2 Lithium at LMW-7S**

LMW-7S is located approximately 1,300 feet to the northeast of the LCPA, near the eastern perimeter of the LCPB. Boron and molybdenum concentrations have historically been elevated at LMW-7S. LMW-7S was installed in 2016 to monitor the LCPB, and since that time lithium concentrations have ranged from 25.6 to 49.0 µg/L. During the statistical evaluation of the May 2023 sampling event (which only uses data collected since April 2020), a LCL of 40.74 µg/L and UCL of 47.46 µg/L were calculated for lithium. Therefore, the UCL is only 0.06 µg/L above the Site GWPS. This UCL is below the calculated limit using monitoring wells with no boron and/or molybdenum impacts of 55.2 µg/L. The lack of elevated lithium when compared with non-impacted wells, coupled with the clear indications that lithium concentrations are not correlated with CCR impacts, indicates that the elevated lithium at LMW-7S is not from the LCPA, but rather is naturally occurring in the alluvial aquifer at this location.

### **5.1.3 Naturally Occurring Lithium Values at the SEC are Consistent with Upstream Sampling Results within the Missouri and Mississippi River Alluvial Aquifers**

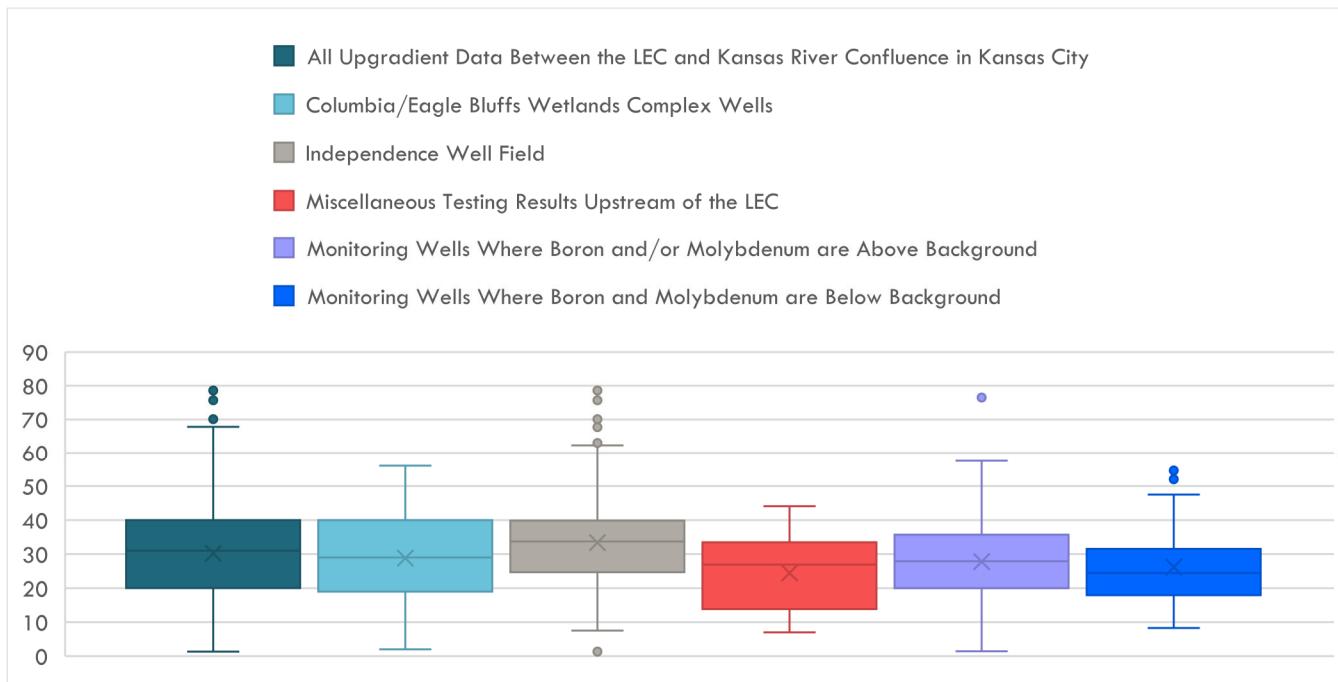

Naturally occurring lithium is present in groundwater across the United States (US), can be found in nearly all rock and soil types, and is most commonly found to be associated with silicate minerals (Tomazscak 2015). The weathering of silicate minerals is known to cause the release of naturally occurring lithium into groundwater (Tomazscak 2015). Site-specific test results (i.e., SEP results) confirm this finding for the LEC.

The National Water Quality Monitoring Council's (NWQMC) Water Quality Portal (available at <https://www.waterqualitydata.us/>) summarizes data from the USGS, the USEPA, and the NWQMC databases. A review of lithium results from within the Missouri Alluvial Aquifer from the NWQMC database includes lithium results from a total of 1,325 groundwater sample results for wells located upgradient of the LEC within the Missouri River alluvial aquifer in the state of Missouri. To evaluate naturally occurring Missouri River Alluvial Aquifer concentrations of lithium, the database results were divided different groups as follows:

- Independence Well Field near Independence, Missouri (Kelly 2010) – Total of 433 results.
- Columbia/Eagle Bluffs Wetland Complex Wells (Richards 1995, Richards 1999, Richards, 2002) – Total of 851 results.
- Miscellaneous testing results upstream of the LEC – Total of 41 results

**Figure 6** displays a box and whisker plot that compares the publicly available groundwater lithium concentration data in the upgradient alluvial aquifers to lithium concentrations at LEC as displayed in **Figure 9**.

**Figure 6 – Comparison of Missouri River Alluvial Aquifer Groundwater Lithium Concentrations – Public Data and LEC Results**

Notes:

1) µg/L – micrograms per liter

Overall, the results display a very similar distribution of lithium results across the state within the Missouri River Alluvium. In fact, lithium concentrations appear to be lower, on average, than those in Independence, Columbia/Eagle Bluffs, as well as other miscellaneous upstream locations. This consistency with upgradient alluvial aquifer samples demonstrates that the lithium concentrations onsite are not from the LCPA, but rather are naturally occurring within the alluvial aquifer.

## 6.0 STATISTICAL EXCEEDANCE FOR COBALT AT AM-1S

Cobalt is present at AM-1S at a level that is statistically above the Site Specific GWPS of 6 µg/L using corrective action statistical methods. AM-1S is located approximately 3,000 feet north of the LCPA, adjacent to the Missouri River. As displayed in **Table 5**, boron and molybdenum are present at AM-1S at concentrations slightly above background.

**Table 5 – May 2023 Analytical Results of Key Constituents at AM-1S**

| Well ID | Cobalt (µg/L) | Boron (µg/L) | Molybdenum (µg/L) |
|---------|---------------|--------------|-------------------|
| AM-1S   | 2.2 J         | 305          | 3.8 J             |
| BMW-1S  | 1.4 J         | 88.2 J       | 2.3 J             |
| BMW-1D  | ND (<1.2)     | 72.4 J       | 1.5 J             |
| BMW-2S  | ND (<1.2)     | 45.3 J       | 2.2 J             |
| BMW-2D  | ND (<1.2)     | 61.5 J       | 1.8 J             |

Notes:

1) µg/L – micrograms per liter.

- 2) J – Result is an estimated value as it is detected above the MDL but below the PQL.
- 3) ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.

As displayed on **Table 1**, cobalt is not typically considered a key CCR indicator parameter because it is usually present at a low concentration in CCR leachate relative to typical background, has low mobility, and has a higher potential for reactivity (EPRI 2017). Since AM-1S well installation in 2018, cobalt concentrations have ranged between 0.96 J µg/L to 5.80 µg/L at AM-1S, with all results being below the Site GWPS of 6 µg/L. Based on the results of the May 2023 Corrective Action Statistical Evaluation, cobalt was present at a level statistically above the GWPS with a LCL of 1.542 µg/L and an UCL of 6.058 µg/L. This evaluation only uses results since commencement of Corrective Action Program sampling in April 2020, and since then, only five sampling results have been collected at AM-1S. If all results (eight total) from AM-1S are used to calculate the upper and lower confidence limits, then AM-1S would be in compliance with the GWPS with a LCL of 2.009 µg/L and an UCL of 5.506 µg/L. However, as prescribed in the Corrective Action Statistical Analysis Plan, only results since the start of Corrective Action monitoring are used for the evaluation, therefore, although no single result has been above the site specific GWPS of 6 µg/L, the UCL is still above the GWPS which is a statistical exceedance using Corrective Action statistical methods.

Provided in **Table 6** is a summary of cobalt minimum, average, and maximum concentrations in the different potential source areas including background groundwater, porewater, and Missouri River. As displayed on **Table 6**, concentrations in AM-1S are above those present in background, river, and LCPA porewater.

**Table 6 – Summary of Cobalt Concentrations**

| Constituent (Units) |         | AM-1S  | Background | Assessment Monitoring Wells Adjacent to LCPA (UMW 1D-9D) | Missouri River | LCPA Porewater | LCPB Porewater |
|---------------------|---------|--------|------------|--|----------------|----------------|----------------|
| Cobalt (µg/L)       | Minimum | 0.96 J | ND (<0.72) | ND (<0.72)   | ND (<1.0)      | ND (<0.73)     | ND (<0.87)     |
|                     | Average | 3.758  | 0.5921     | 0.4355   | 1.762          | NA             | ND (<0.87)     |
|                     | Maximum | 5.8    | 1.9 J      | 2.7 J* (0.79 J)  | 4.4 J          | ND (<0.83)     | ND (<0.87)     |

Notes:

- 1) µg/L – micrograms per liter.
- 2) Not applicable.
- 3) J – Result is an estimated value as it is detected above the MDL but below the PQL.
- 4) ND – Non-Detect.
- 5) \* 2.7 J at UMW-1D is considered an outlier. 0.79 J is the second highest result.

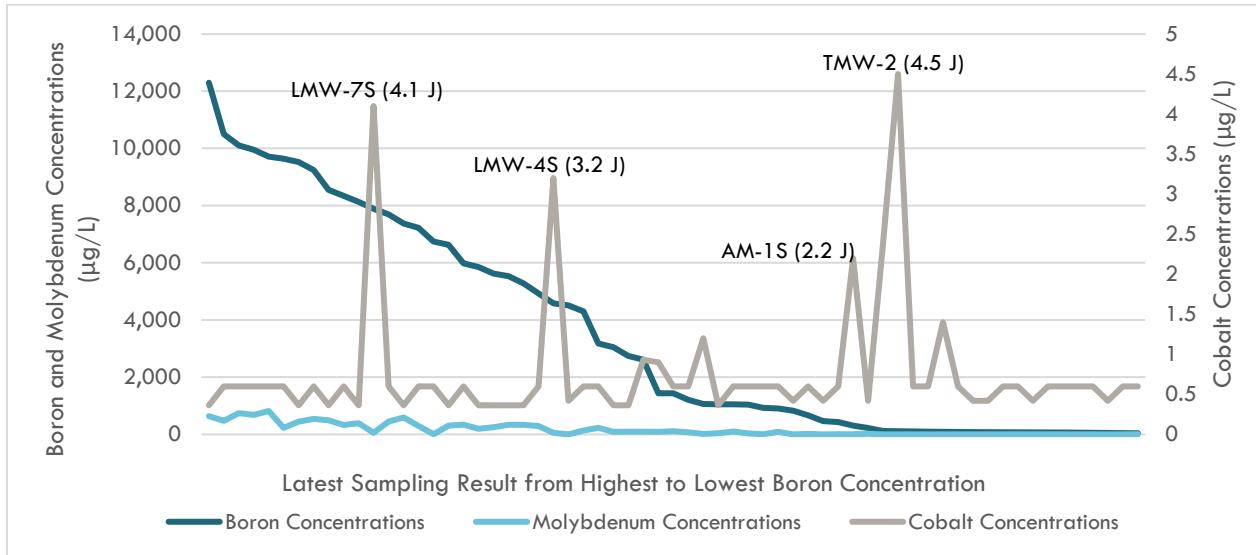

In January 2018, as part of the initial LCPB ASD, porewater was sampled in the LCPA and LCPB CCR units. All nine results from this analysis were at a non-detect level (<0.73 to <0.87 µg/L). This lack of cobalt in the CCR materials has been confirmed in other studies as well, including the current NPDES permit (#MO-0004812) where cobalt is not listed as a Pollutant of Concern (POC), since the test result collected from the LCPA outfall is non-detect (<1 µg/L). Lack of cobalt within the pore-water of the LCPA, coupled with the lack of cobalt at a statistically significant level above the GWPS in any other monitoring well onsite, indicates that cobalt concentrations in AM-1S are not derived from the LCPA, but rather an alternative source such as the Missouri River or naturally occurring in the alluvial aquifer at this location.

Further evidence that the LCPA is not a source of elevated cobalt concentrations is the lack of cobalt in the groundwater monitoring wells directly adjacent to the CCR Unit used for Detection and Assessment Monitoring. These wells (UMW-1D through UMW-9D, as displayed in **Figure 1**) show elevated key CCR indicator parameter concentrations for boron and molybdenum but do not have elevated cobalt concentrations. Of the 136 testing

results for these 9 monitoring wells, only 2 results have a value over the method detection limit (MDL) at 2.7 J<sup>2</sup> and 0.79 J µg/L (still below the PQL). Therefore, 98.5% of all cobalt results in monitoring wells located directly adjacent to the LCPA are present at a non-detect level.

Concentrations of cobalt do not closely track with key indicator parameters of boron or molybdenum. **Figure 7** is a graph that displays boron, cobalt, and molybdenum concentrations from the most recent sampling result at each monitoring well (data used to generate this graph is available in **Table 4**). Molybdenum concentrations appear to correlate with boron concentrations, with elevated levels at similar monitoring wells (displayed previously in **Figure 2**). Cobalt concentrations do not track closely with either boron or molybdenum concentrations and range from non-detect (<0.73 µg/L) to 4.5 J µg/L for the most recent sampling result at each well.

**Figure 7 – Comparison of Boron, Molybdenum, and Cobalt Concentrations**

#### Notes:

- 1) µg/L – micrograms per liter.
- 2) J – Result is an estimated value as it is detected above the MDL but below the PQL.
- 3) Values displayed in order from highest to lowest boron concentrations. Data used to prepare **Figure 7** is provided in **Table 4**.
- 4) Cobalt concentrations displayed on secondary axis, with values on the right side of the graph.

<sup>2</sup> The 2.7 J result from 4/11/22 at UMW-1D is considered an outlier using the methods outlined in the sites Statistical Analysis Plan.

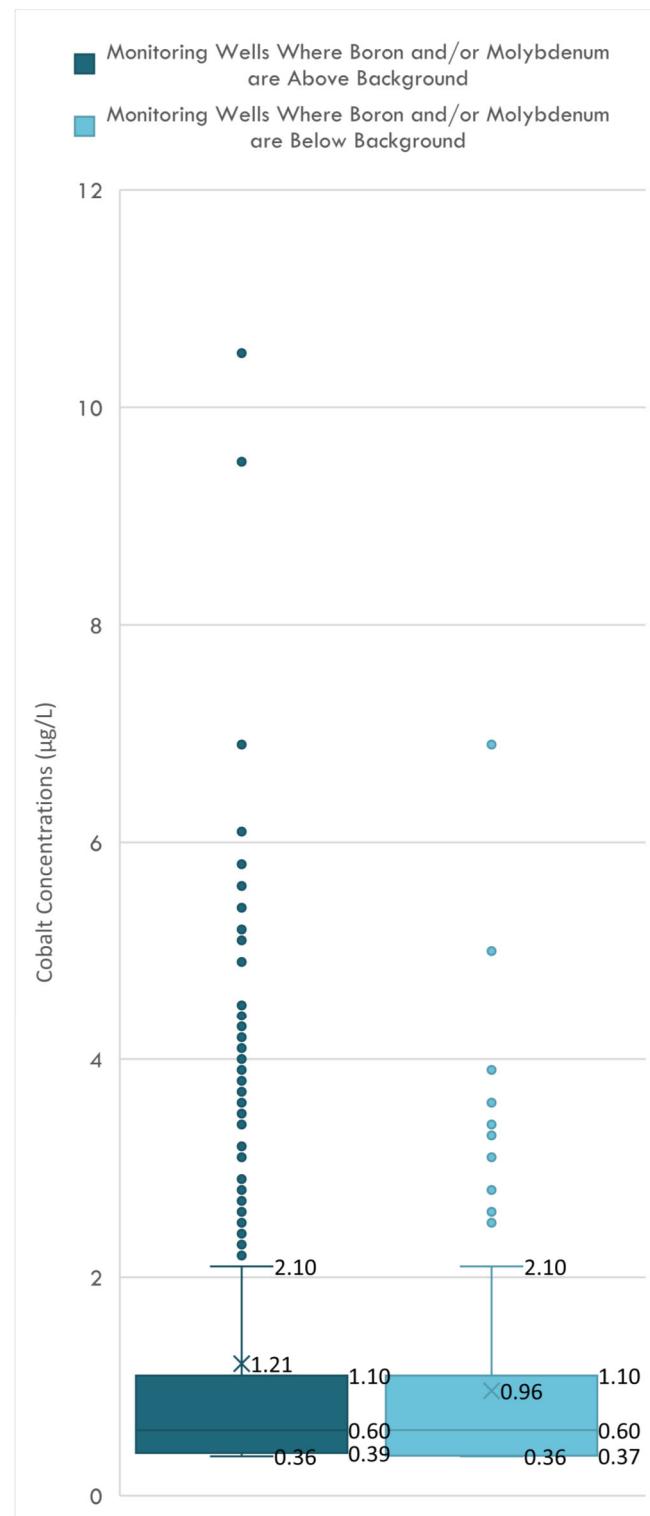

As displayed in **Table 4**, there are 15 monitoring wells onsite where boron and molybdenum concentrations are below background and 48 monitoring wells onsite where boron or molybdenum are above background concentrations. **Figure 8** displays the distribution of cobalt concentrations between these two datasets (with and without boron or molybdenum exceedances). For this figure, historical data for each of the wells identified above were used to generate the distribution (420 and 176 total results, respectively). The results of this box and whisker plot display a nearly identical distribution between the two datasets. This further demonstrates that cobalt concentrations do not correlate with key CCR indicator parameters, and therefore, elevated cobalt concentrations onsite are naturally occurring and not related to CCR impacts.

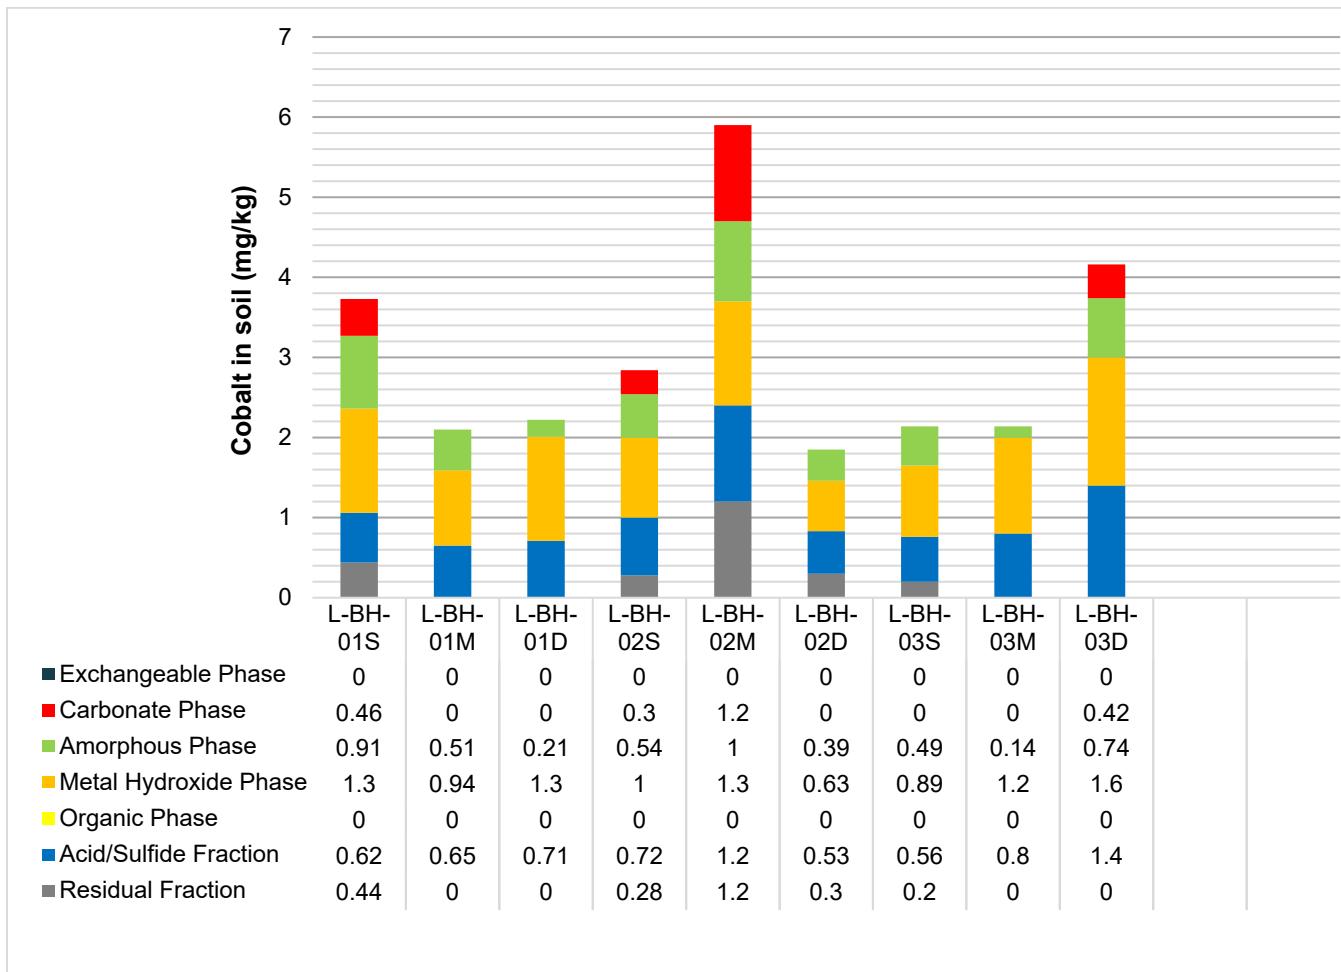

### 6.1.1 Sequential Extraction Data Confirms Presence of Naturally Occurring Cobalt in Sediments

As with lithium, a seven-step sequential extraction method (SEP) based on Tessier et al. (1979) was used to identify the provenance of cobalt in soils (i.e. the operationally-defined fraction that contains the metal) and determine potential environmental mobility. The total concentration of a metal measured from all seven steps can be compared to the concentration determined from the total metal analysis for compositional accountability. The locations of the sequential extraction sample locations are provided in **Figure 1**.

Results of the sequential extraction testing indicate naturally occurring cobalt is present in soils at the LEC in fractions 6 and 7 of each of the soil borings, regardless of if the location is directly adjacent to the LCRA or at background locations. Cobalt is reported at concentrations ranging from 1.8 to 5.9 milligrams per kilogram (mg/kg, from the SEP) and is present in the residual and sulfide component of the soil (28 to 45%), i.e., the non-environmentally available fractions. Background soil samples, outside of the impacts from the LCRA, display similar results as those soil samples collected adjacent to the CCR unit, indicating that cobalt is not from impacts from the CCR Unit, but rather is naturally occurring in the alluvial aquifer.

**Figure 8 – Distribution of Cobalt Concentrations in Monitoring Wells With and Without Key CCR Indicators**

**Figure 9 - Sequential Extraction of Cobalt Results****Notes:**

- 1) Mg/kg – milligrams per kilogram.
- 2) Sample locations provided in **Figure 1**. BH-01 is near the background wells, BH-02 is just south of the LCPA CCR Unit and BH-03 is located near AM-1S and the Missouri River.

### *6.1.2 Naturally Occurring Cobalt Values at the LEC are Consistent with Upstream Sampling Results within the Missouri and Mississippi River Alluvial Aquifers*

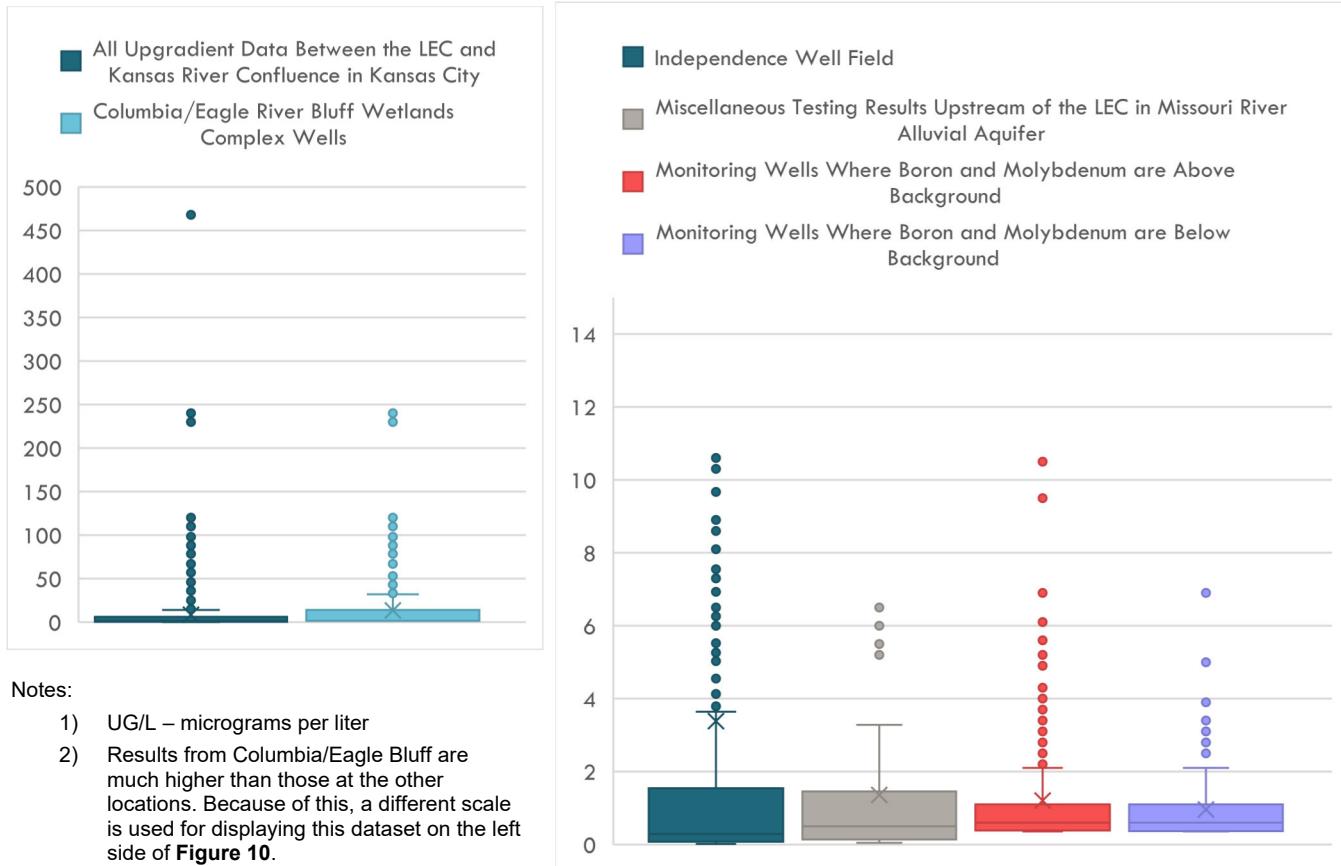

Cobalt may be present in mineral form as a constituent in arsenides, carbonates, sulfides, and oxides (Hem, 1989; Smith and Carson, 1981). During weathering of these minerals (i.e., dissolution and/or oxidation), any cobalt is typically released and redistributed to iron or manganese (hydr)oxides (Butt et al., 2000) or other sorbent (e.g., clays, organic matter). The National Water Quality Monitoring Council's (NWQMC) Water Quality Portal (available at <https://www.waterqualitydata.us/>) summarizes data from the USGS, the USEPA, and the NWQMC databases. A review of Cobalt results from within the Missouri River Alluvial Aquifer from the NWQMC database includes Cobalt results from a total of 917 groundwater sample results for wells located upgradient of the LEC within the Missouri River alluvial aquifer in the state of Missouri. To evaluate naturally occurring Missouri River Alluvial Aquifer concentrations of cobalt, the database results were divided different groups as follows:

- Independence Well Field near Independence, Missouri (Kelly 2010) – Total of 406 results.
- Columbia/Eagle Bluffs Wetland Complex Wells (Richards 1995, Richards 1999, Richards, 2002) – Total of 470 results.

- Miscellaneous testing results upstream of the LEC – Total of 41 results.

**Figure 10** displays a box and whisker plot that compares the publicly available groundwater cobalt data in the upgradient alluvial aquifers to those completed onsite as displayed in **Figure 13**.

#### Figure 10 – Comparison of Missouri River Alluvial Aquifer Groundwater Cobalt Concentrations – Public Data and LEC Results

The cobalt concentrations from the Columbia/Eagle Bluffs Welands complex are much higher than those at the LEC and those further upgradient at the Independence Well Field. It is unknown why these results are at such elevated concentrations, therefore, they are not used for this evaluation. Excluding the data from Columbia/Eagle Bluffs Welands complex, the results display that the majority of cobalt concentrations across the Missouri River alluvial aquifer are below 4 µg/L with some outliers above 6 µg/L at each site. This is likely caused by the heterogeneous nature of the Missouri River Basin alluvial aquifer deposits, which are derived from a vast area of the United States including parts of Missouri, Iowa, Kansas, Nebraska, South Dakota, North Dakota, Montana, Wyoming, and Colorado. The sediments in the Missouri River Alluvial Aquifer at the site are made up of a mixture of sediments from all reaches of the Missouri River Basin. Cobalt deposits and many metamorphic and igneous rocks containing cobalt occur at numerous locations within the Missouri River Basin. Therefore, the alluvial aquifer sediments in the vicinity of AM-1S (as well as other various locations within the Missouri River Alluvium) likely include localized zones/particles of increased cobalt concentrations and most likely the cause of the elevated concentrations observed at the LEC.

This inconsistency with upgradient alluvial aquifer samples indicates that the cobalt concentrations onsite are not from the LCPA, but rather are naturally occurring levels that can vary over time within the aquifer groundwater.

## 7.0 SUMMARY

Based on the information presented in this ASD, the statistical exceedances for lithium and cobalt in isolated wells at LEC using Corrective Action statistical methods are not the result of impacts from the LCPA, but instead are the result of natural geochemical variability of groundwater within the alluvial aquifer at the site. The natural geochemical source for lithium and cobalt exceedances is supported by several factors including: (1) a lack of correlation between key CCR indicators (boron and molybdenum) and isolated exceedances, (2) the presence of lithium and cobalt at similar levels in alluvial aquifer samples upgradient of the site, and (3) cobalt, and lithium are naturally occurring elements in soils and alluvial aquifer sediments that are derived from igneous rocks within the Missouri River watershed.

Notes

- 1) µg/L - micrograms per liter
- 2.) ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.
- 3.) J - Result is an estimated value.
- 4.) Date corresponds with most recent result for each analyte.
- 5.) Well ID's highlighted in light red have values above the background limit for boron and/or molybdenum. These values are used in the "concentrations with a boron and/or molybdenum value over background" for the box and whisker plots. Well ID's in blue do not have a molybdenum or boron value above background, and these well are used in the "concentrations without a boron or molybdenum value over background" column for the box and whisker plots.
- 6.) If all background values are less than the PQL, then the Double Quantification Rule (DQR) is used. In cases were DQR is the background value, the latest PQL is used for the background limit.

### Groundwater Elevation Contours

 Groundwater Elevation Contour (FT MSL)

— Inferred Groundwater Elevation Contour (ET MSI )

...  
...  
...

10. The following table summarizes the results of the study.

## NOTES

- NOTES**

  1. All locations and boundaries are approximate.
  2. Groundwater elevations displayed in FT MSL (Feet above Mean Sea Level).
  3. Missouri River level obtained from USGS Labadie gauge 06935550.
  4. AW-1 was not used in potentiometric surface contouring due to localized conditions causing an artificially high potentiometric elevation.
  5. MW-28 was not used in potentiometric surface contouring due to measurement error.
