

COMMITTED TO CLEAN

We at Ameren Missouri care about being good stewards of our planet. We've heard from many customers asking about our move toward clean energy. Ameren just set a net-zero carbon emissions goal across Missouri and Illinois that includes our largest-ever expansion of renewable energy while maintaining the reliability and affordability you have come to expect.

WHAT'S IN OUR PLAN?

Add clean energy

Add 3,100 MW of wind and solar generation by 2030 and a total of 5,400 MW by 2040.

Build on existing carbon-free generation

Continue conservative operations and invest in long-term stability of the Callaway Energy Center and hydro generating facilities.

Preserve affordability and reliability

Evaluate and pursue clean energy resources without compromising on delivering 24/7 energy in an affordable manner.

Retire coal-fired energy centers

Advance the planned retirement dates of coal-fired energy centers.

Ameren Missouri projects our plan will create thousands of new construction jobs, bolstering local communities and making Missouri an even better place for businesses and families. **Learn more at [AmerenMissouri.com/NetZero](https://www.AmerenMissouri.com/NetZero)**

COMMUNITY SOLAR

Ameren Missouri offers customers a range of options to increase their use of renewable energy. One of those is Community Solar, an easy way to get clean, solar energy without installing panels on your home.
