## EXECUTIVE SUMMARY AND STATUS OF THE SCPA GROUNDWATER MONITORING PROGRAM

This annual report was developed to meet the requirements of United States Environmental Protection Agency (USEPA) 40 CFR Part 257 "Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals From Electric Utilities; Final Rule" (the CCR Rule). The CCR Rule requires owners or operators of existing CCR units to produce an Annual Groundwater Monitoring and Corrective Action Report (Annual Report) each year (§ 257.90(e)). Ameren Missouri (Ameren) has determined that the SCPA Coal Combustion Residuals (CCR) Surface Impoundment at the Sioux Energy Center (SEC) is subject to the requirements of the CCR Rule. This Annual Report for the SCPA describes CCR Rule groundwater monitoring activities from January 1, 2023 through December 31, 2023 including verification results related to late 2022 sampling.

Throughout 2023, the SCPA has been in Corrective Action Monitoring with Detection and Assessment Monitoring continuing concurrently. Semi-annual groundwater sampling associated with Detection Monitoring has been ongoing since Detection Monitoring was initiated on October 17, 2017 as required by the CCR Rule. As a part of Detection Monitoring, statistical evaluations are completed after each sampling event to determine if there are any values at a Statistically Significant Increase (SSI) over background. SSIs have been determined for each sampling event and a summary of the SSIs is provided in **Table 1**.

The Assessment Monitoring program was established at the SCPA on April 15, 2018. Since that time, groundwater sampling and statistical evaluations have been completed semi-annually to determine if there are any values at a Statistically Significant Level (SSL) over the site-specific Groundwater Protection Standard (GWPS). On October 11, 2018, it was determined that molybdenum was present at an SSL. A summary of SSLs for the past year is provided in **Table 1**.

**Table 1 - Summary of 2023 SCPA Sampling Events, Previous Year Verification, and Statistical Evaluation for Detection and Assessment Monitoring Well Network**

Event Name	Type of Event and Sampling Dates	Laboratory Analytical Data Receipt	Parameters Collected	Verified SSIs	SSLs	SSI & SSL Determination Date
October 2022 Sampling Event	Detection Monitoring, October 18-19, 2022	November 10, 2022	Appendix III, Detected Appendix IV (See Note 1), & Major Cations and Anions	<b>pH:</b> UMW-2D, UMW-3D <b>Boron:</b> UMW-2D, UMW-3D, UMW-4D, UMW-5D, UMW-6D <b>Calcium:</b> UMW-2D, UMW-3D, UMW-4D <b>Chloride:</b> UMW-1D, UMW-2D, UMW-3D, UMW-4D, UMW-5D <b>Fluoride:</b> UMW-2D, UMW-5D <b>Sulfate:</b> UMW-2D, UMW-3D, UMW-4D <b>TDS:</b> UMW-2D, UMW-3D, UMW-4D	<b>Molybdenum:</b> UMW-2D, UMW-3D, UMW-4D, UMW-5D	February 8, 2023
	No Verification Sampling was required. No new SSIs were observed in the October 2022 sampling event.					
May 2023 Sampling Event	Detection Monitoring, May 1-8, 2023	June 19, 2023	Appendix III, Appendix IV, Major Cations and Anions, & selected MNA Parameters	<b>pH:</b> UMW-1D, UMW-2D, UMW-3D <b>Boron:</b> UMW-1D, UMW-2D, UMW-3D, UMW-4D, UMW-5D, UMW-6D <b>Calcium:</b> UMW-2D, UMW-3D, UMW-4D <b>Chloride:</b> UMW-2D, UMW-3D, UMW-4D, UMW-5D <b>Sulfate:</b> UMW-2D, UMW-3D, UMW-4D <b>TDS:</b> UMW-2D, UMW-3D, UMW-4D	<b>Molybdenum:</b> UMW-2D, UMW-3D, UMW-4D, UMW-5D	September 15, 2023
	Verification Sampling, July 10, 2023	July 25, 2023	Detected Appendix III parameters (See Note 2)			

Event Name	Type of Event and Sampling Dates	Laboratory Analytical Data Receipt	Parameters Collected	Verified SSIs	SSLs	SSI & SSL Determination Date
November 2023 Sampling Event	Detection Monitoring, November 10-14, 2023	December 22, 2023	Appendix III, Detected Appendix IV <small>(See Note 3)</small> , & Major Cations and Anions	To be determined after statistical analysis and Verification Sampling are completed in 2024.		

## Notes:

- 1) Testing was completed for Appendix IV analytes that were detected above the Practical Quantitation Limit (PQL) during the March/April 2022 sampling event.
- 2) Only analytes/wells that were detected above the prediction limit and that had not already been verified were tested during Verification Sampling.
- 3) Testing was completed for Appendix IV analytes that were detected above the PQL during the May 2023 sampling event.
- 4) SSI – Statistically Significant Increase.
- 5) SSL - Statistically Significant Level.
- 6) TDS – Total Dissolved Solids.
- 7) MNA – Monitored Natural Attenuation.

On January 9, 2019, Ameren initiated its Corrective Measures Assessment (CMA) and posted the CMA report on May 20, 2019. A public meeting was held on May 31, 2019 and responses to public comments are posted on Ameren's CCR website. On August 30, 2019, Ameren published its "Remedy Selection Report – 40 CFR § 257.97 Rush Island, Labadie, Sioux and Meramec CCR Basins" (Remedy Selection Report) that identified source control through installation of a low permeability cover system, use of Monitored Natural Attenuation (MNA), and installation of Supplemental Corrective Measures as its chosen corrective action remedial plan. The Remedy Selection Report's remedial plan consists of two phases as follows:

- 1) Source control, stabilization and containment of CCR by installation of a low permeability geomembrane cap (a minimum  $1 \times 10^{-7}$  centimeters per second (cm/sec) versus  $1 \times 10^{-5}$  cm/sec required by the CCR Rule).
- 2) Once source control is achieved, monitor the natural attenuation of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modelling evaluations will document that concentrations are decreasing as modelled. MNA occurs due to naturally occurring processes within the aquifer.

In addition to MNA as a Corrective Measure, Ameren has also initiated a supplemental corrective measure consisting of groundwater extraction, treatment, and re-injection using ex-situ treatment technologies with chemical precipitation and selective-ion exchange.

In January 2021, Ameren commenced Phase 1 of the corrective measures remedial plan by initiating closure at the SCPA. Capping and closure of the SCPA was fully completed in 2022 (closure certification on October 14, 2022). Therefore, the SCPA transitioned into the post-closure care requirements of the CCR Rule in October 2022. As outlined in §257.104 (Post-closure Care Requirements) of the CCR Rule, the monitoring system and programs must be maintained for at least 30 years. After 30 years, if the unit is in Detection Monitoring, the unit may cease groundwater sampling activities, otherwise post-closure care must continue until the unit can return to Detection Monitoring in accordance with section §257.95 (Assessment Monitoring Program).

Once the SCPA was certified closed, Phase 2 of the corrective measures remedial plan as outlined in the Remedy Selection Report began with the October 2022 Corrective Action Sampling event conducted October 18-21, 2022. The associated statistical analyses for this event were completed in February 2023. Since that time, groundwater sampling and statistical evaluations have been completed semi-annually to determine if any constituents within the Corrective Action Monitoring Well Network are statistically in exceedance of the GWPS. A summary of Corrective Action Monitoring activities and associated statistical results for this year is provided in **Table 2**.

**Table 2 - Summary of 2023 SCPA Sampling Events and Statistical Evaluations for Corrective Action Monitoring Well Network**

Event Name	Type of Event and Sampling Dates	Laboratory Analytical Data Receipt Date	Parameters Collected	Constituents Statistically Exceeding the GWPS as a Part of Corrective Action Statistical Evaluations	Date Exceedance of GWPS was determined
October 2022 Sampling Event	Phase 2 – Corrective Action Sampling October 18-21, 2022	November 15, 2022	Appendix III, Detected Appendix IV (See Note 1), & Major Cations and Anions	<b>Cobalt:</b> LMW-6S <b>Lithium:</b> LMW-5S, TP-2D, TP-6S <b>Molybdenum:</b> LMW-1S, LMW-2S, LMW-5S, AM-1D, AM-1S, TP-5D, PZ-1S	February 13, 2023
May 2023 Sampling Event	Phase 2 – Corrective Action Sampling May 1-9, 2023	June 19, 2023	Appendix III, Appendix IV, Major Cations and Anions, & selected MNA parameters	<b>Cobalt:</b> (See Note 4) LMW-6S <b>Lithium:</b> (See Note 4) LMW-5S, TP-2D, TP-6S <b>Molybdenum:</b> LMW-2S, LMW-5S, AM-1D, AM-1S, TP-5D, PZ-1S	September 15, 2023
November 2023 Sampling Event	Phase 2 – Corrective Action Sampling November 10-14, 2023	December 20, 2023	Appendix III, Detected Appendix IV (See Note 2), & Major Cations and Anions	To be determined after statistical analyses are completed in 2024.	

Notes:

- 1) Testing was completed for Appendix IV analytes that were detected above the PQL during the March/April 2022 sampling event.
- 2) MNA – Monitored Natural Attenuation.
- 3) Testing was completed for Appendix IV analytes that were detected above the PQL during the May 2023 sampling event.
- 4) An ASD was prepared for Cobalt and Lithium exceedances that concludes these statistical exceedances are not a result of impacts from the SCPA but appear to result from natural geochemical variability within the alluvial aquifer.

While there are exceedances of the GWPS using corrective action statistical analysis methods for cobalt, lithium, and molybdenum, variability in the initial groundwater results after closure of the SCPA is expected, especially at wells near the SCPA CCR unit (e.g. LMW-2S). Concentrations of these constituents are expected to show decreases in concentration over time after stabilization occurs from closure and corrective measure remedial activities. An Alternative Source Demonstration (ASD) was completed for the cobalt and lithium exceedances, demonstrating that these exceedances are not a result of impacts from the SCPA but instead are the result of natural geochemical variability of groundwater within the alluvial aquifer at the site. Molybdenum remains as an exceedance for the SCPA Corrective Action Network, therefore, the unit remains in Corrective Action monitoring.

### **Supplemental Corrective Measures**

In addition to MNA as a Corrective Action Remedy at Sioux, Ameren received an Underground Injection Control Missouri State Operating Permit (UI-0000044) and a pilot groundwater treatment study was completed. The results of this pilot treatment study displayed significant reductions in key CCR indicator parameters. Due to the success of the pilot treatment study, Ameren expanded this technology around the SCPA, to supplement capping and MNA at the site. The groundwater treatment system became fully operational in February 2023 and over 11.5 million gallons of water were treated in 2023.

Overall, Corrective Action taken by Ameren has reduced concentrations of key CCR constituents by means of closure of the SCPA with an engineered geomembrane cover system, installation and operation of a groundwater treatment system, and MNA of impacts. In monitoring wells directly adjacent to the SCPA, average boron concentrations have decreased approximately 31%, and average molybdenum concentrations have decreased approximately 49% since 2020 (final year the SCPA was active). Groundwater monitoring and evaluations of monitoring results will continue, and progress will be tracked in future Annual Reports and statistical evaluations.

## 1.0 INSTALLATION OR DECOMMISSIONING OF MONITORING WELLS

There are currently two different networks used for monitoring the SCPA: the monitoring well network established under §257.91 for Detection and Assessment Monitoring and the network established under §257.98 for Corrective Action Monitoring, see **Figure 1**. No new wells were installed or decommissioned in 2023. A summary of the well construction details for monitoring wells in both networks is provided in **Table 3**. Further details, including well construction diagrams for these wells, are provided in previous annual reports for the SCPA.

## 2.0 GROUNDWATER SAMPLING RESULTS AND DISCUSSION

The following sections discuss the sampling events completed for the SCPA CCR Unit in 2023. **Tables 4** and **5** provide a summary of the groundwater samples collected in 2023 including the number of samples, the date of the sample collection, and the monitoring program for which the samples were collected. **Appendix A** provides laboratory analytical data for CCR Rule sampling events conducted in 2023.

### 2.1 Detection Monitoring Program

A Detection Monitoring sampling event was completed October 18-19, 2022. The statistical analysis to evaluate for SSIs for the October 2022 event was not completed until 2023 and is included in this report. No new exceedances of any Appendix III analytes were observed; therefore, no verification sampling was necessary for this event. **Table 6** summarizes the results and statistical analyses of the October 2022 Detection Monitoring event. Laboratory analytical data for the October 2022 Detection Monitoring event are provided in the 2022 Groundwater Monitoring and Corrective Action Annual Report for the SCPA.

Detection Monitoring samples were collected May 1-8, 2023 and testing was completed for all Appendix III analytes, as well as major cations and anions. As outlined in the Statistical Analysis Plan for the Site, updates to the statistical limits should be completed once four to eight new sample results are available. During the statistical analyses of the May 2023 sampling event, the statistical limits used to determine an SSI were updated according to the Statistical Analysis Plan. New initial exceedances for some Appendix III analytes triggered a verification sampling event, which was completed on July 10, 2023 and verified SSIs. **Table 7** summarizes the results and statistical analysis of the May 2023 Detection Monitoring event.

A Detection Monitoring sampling event was completed November 10-14, 2023 and testing was performed for all Appendix III analytes, as well as major cations and anions. Statistical analyses to evaluate for SSIs in the November 2023 data were not completed in 2023 and the results will be provided in the 2024 Annual Report. **Table 8** summarizes the results of the November 2023 Detection Monitoring event.

### 2.2 Assessment Monitoring Program

An Assessment Monitoring sampling event was completed October 18-19, 2022, and testing was completed for Appendix IV parameters detected above the Practical Quantitation Limit (PQL) during the previous sampling event from either the Assessment or Corrective Action Groundwater Monitoring Well Networks, as well as major cations and anions. **Table 9** summarizes the results of the October 2022 Assessment Monitoring event.

Laboratory analytical data for this event are provided in the 2022 Annual Report. The statistical evaluation for this event was completed in 2023 and is included in this report. The statistical evaluation for this event and a table that displays the site-specific GWPSSs are provided in **Appendix B** and determined there were no new SSLs. The SSLs for the SCPA continue to be:

- Molybdenum at UMW-2D, UMW-3D, UMW-4D, and UMW-5D

An Assessment Monitoring sampling event was completed from May 1-8, 2023 and testing was completed for all Appendix IV analytes, major cations and anions, and other selected MNA parameters. **Table 10** summarizes the results of the May 2023 Assessment Monitoring event. During the statistical analyses of the May 2023 sampling event, the site-specific GWPSSs used to determine SSLs were updated in accordance with the Statistical Analysis

plan. The statistical evaluation for this event and a table that displays the site-specific GWPS are provided in **Appendix C** and determined that there were no new SSLs.

An Assessment Monitoring sampling event was completed November 10-14, 2023, and testing was completed for Appendix IV analytes that were detected above the PQL during the May 2023 sampling event from either the Assessment or Corrective Action Groundwater Monitoring Well Networks as well as major cations and anions.

**Table 11** summarizes the results of the November 2023 Assessment monitoring event. However, statistical analyses to evaluate SSLs were not completed in 2023. Results of the statistical evaluation will be included in the 2024 Annual Report.

## 2.3 Corrective Action Monitoring Program

A Corrective Action sampling event was completed October 18-21, 2022, and testing was completed for all Appendix III analytes, Appendix IV analytes that were detected above the PQL during the previous sampling event from either the Assessment or Corrective Action Groundwater Monitoring Well Networks, and major cations and anions. A summary of the October 2022 Corrective Action sampling event results is provided in **Table 12** and the results of the statistical evaluation for this event are provided in **Appendix D**. This was the first Corrective Action statistical evaluation completed for the SCPA. A summary of constituents displaying statistical exceedances of the GWPS using Corrective Action statistical methods<sup>1</sup> at corresponding wells is as follows:

- Cobalt at LMW-6S
- Lithium at LMW-5S, TP-2D, and TP-6S
- Molybdenum at LMW-1S, LMW-2S, LMW-5S, AM-1D, AM-1S, TP-5D, and PZ-1S

A Corrective Action sampling event was completed on May 1-9, 2023. Testing was completed for all Appendix III and IV analytes, major cations and anions, and other selected MNA parameters. A summary of the May 2023 Corrective Action sampling results is provided in **Table 13**. A statistical evaluation for this event was completed using updated site-specific GWPSs, as discussed in **Section 2.2**. Results of the statistical evaluation for this event are provided in **Appendix E**. Based on the statistical evaluation, as of the May 2023 sampling event, Molybdenum at LMW-1S is no longer in exceedance of the GWPS. Other exceedances remained the same as those identified following the October 2022 Corrective Action sampling event.

As stated in the Corrective Action GMP, if the statistical evaluation determines that a constituent exceeds the GWPS that was not identified as an SSL in Assessment Monitoring, the data should be evaluated to determine the source of the exceedance. Cobalt and lithium have not historically been identified as an SSL in Assessment Monitoring and a review of the data determined that the statistical exceedances at wells LMW-6S (cobalt) as well as LMW-5S, TP-2D, and TP-6S (lithium) are not caused by the SCPA CCR unit. Therefore, an Alternative Source Demonstration (ASD) was completed following the May 2023 sampling event and is provided in **Appendix F**. This ASD concludes the statistical exceedances for cobalt and lithium at these wells are not a result of impacts from the SCPA but appear to result from natural geochemical variability within the alluvial aquifer.

A Corrective Action sampling event was completed on November 10-14, 2023, and testing was completed for Appendix III analytes, Appendix IV analytes that were detected above the PQL during the May 2023 sampling event from either the Assessment or Corrective Action Groundwater Monitoring Well Networks, as well as major cations and anions. **Table 14** summarizes the results of the November 2023 Corrective Action event. Analyses to evaluate statistical exceedances of the GWPS were not completed in 2023. Results of the statistical evaluation will be included in the 2024 Annual Report.

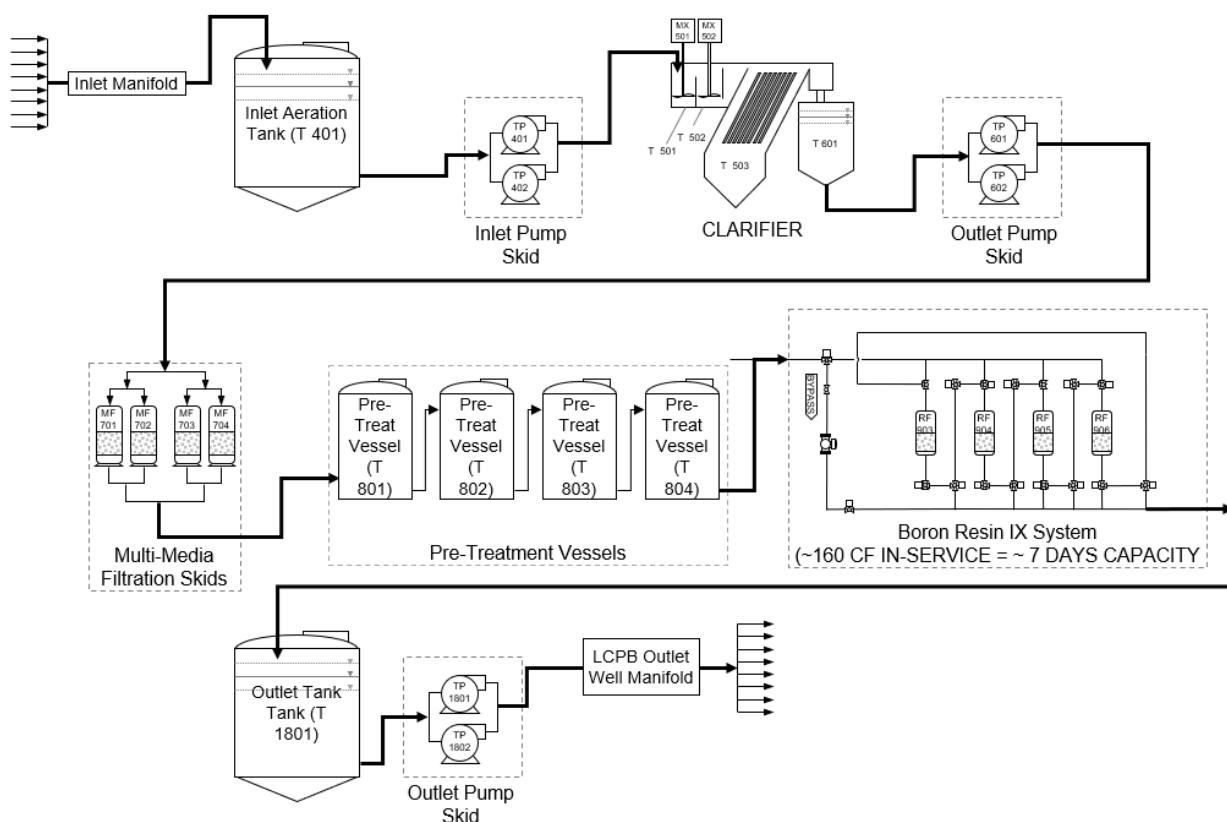

<sup>1</sup> The statistical testing method used to evaluate the Corrective Action monitoring results is the confidence interval method, which is the same method used during Assessment Monitoring, except the null hypothesis for the confidence intervals is reversed. For Corrective Action, the Unified Guidance states that the appropriate null hypothesis is that the groundwater population (mean) exceeds the Groundwater Protection Standard (GWPS) for those constituents that exceed the GWPS under Assessment Monitoring program. Therefore, in Corrective Action the Upper Confidence Limit (UCL) is compared to the GWPS instead of the Lower Confidence Limit (LCL) [as used during Assessment Monitoring].

## 2.4 Supplemental Corrective Measures

As outlined in Ameren's Remedy Selection Report, once source control is achieved, Ameren planned to monitor natural attenuation of groundwater and complete supplemental corrective measures using groundwater treatment. In 2021, Ameren began implementing the supplemental corrective measure for CCR groundwater compliance using ex-situ treatment technologies of chemical precipitation and selective-ion exchange by completing a pilot study at the Rush Island Energy Center. The results of this groundwater treatment pilot study displayed significant reductions in key CCR indicator concentrations. Due to the success, Ameren expanded this technology to the Sioux Energy Center and operation of the treatment system began in February 2023. After a period of optimization, the system achieved target runtime and flowrate beginning in September 2023.

The groundwater treatment system was developed to successfully capture the CCR impacted groundwater from the SCPA, treat the water by removing contaminants, and return treated water to the same hydrogeologic horizon. The process used for this treatment is illustrated in **Figure 2** below.

**Figure 2: CCR Impacted Groundwater Treatment Process**

The process is constructed to minimize waste generation and operate independently of other facilities onsite.

**Figure 3** on the following page shows the influent and effluent data from the SCPA groundwater treatment collected over the period of system optimization through initial full-scale system operation. Displayed data are for key CCR constituents in groundwater downgradient of the impoundment. The figure illustrates that, after a few months of optimization, the system effluent concentrations have consistently been below the discharge standards for groundwater (indicated in red). These discharge standards meet drinking water action levels for the applicable constituents.

**Figure 3: SCPA Groundwater Treatment System Influent and Effluent Concentrations – System Optimization Period and Full-Scale Operation**

## 2.5 Evaluation of Corrective Measures

Ameren commenced Phase 1 of the corrective action remedial plan by initiating closure of the SCPA in January 2021. Closure was completed on October 14, 2022. The November 2023 groundwater sampling event represents the third event since closure of the SCPA was completed, and the second sampling event since the implementation of the full groundwater treatment system.

In order to document the effectiveness of the Corrective Action Remedies (corrective measures), an evaluation of the key site CCR indicators was completed. **Figures 4 and 5** (below), display the site average concentrations for boron and molybdenum in the monitoring wells directly adjacent to the SCPA. While there is variability in individual well results, the average annual concentrations of boron and molybdenum at the site are decreasing as follows:

- Boron - Average concentrations in the monitoring wells downgradient of the SCPA have decreased approximately 31% since 2020.
- Molybdenum – Average concentrations in the monitoring wells downgradient of the SCPA have decreased approximately 49% since 2020.

Figure 4 - Average Boron Concentrations

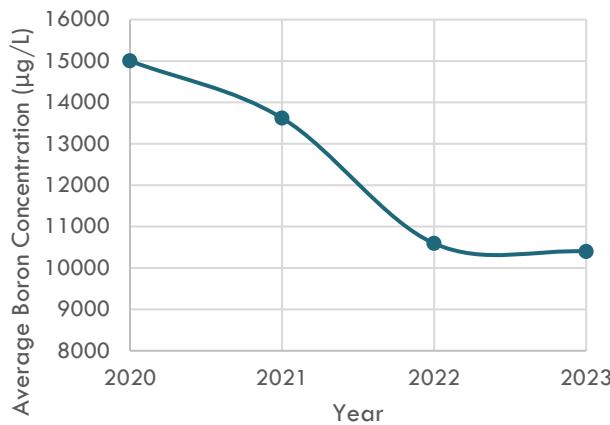

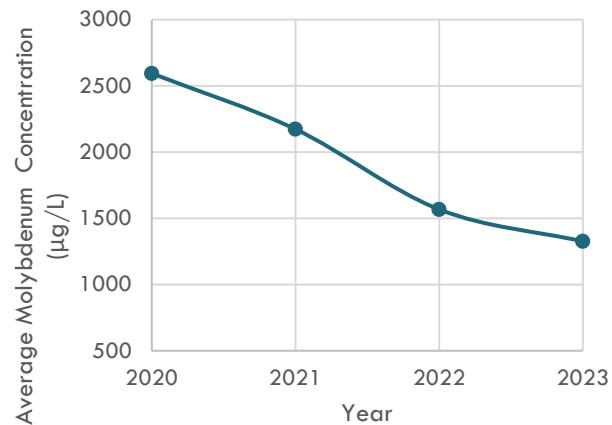

Figure 5 - Average Molybdenum Concentrations

As displayed by these figures, corrective measures taken by Ameren, including the closure of the SCPA with an engineered geomembrane cover system, installation and operation of a groundwater treatment system, and MNA have been effective in reducing concentrations of these constituents. Groundwater monitoring and evaluation of monitoring results will continue, and progress will be tracked in future Annual Reports and statistical evaluations.

## 2.6 Groundwater Elevation, Flow Rate and Direction

To meet the requirements of §257.93(c), water level measurements were taken at all monitoring wells prior to the start of groundwater purging and sampling. Static water levels were measured within a 24-hour period in each monitoring well using an electronic water level indicator.

Groundwater elevations were used to generate potentiometric surface maps included in **Appendix G**. As shown on the potentiometric surface maps, groundwater flow direction within the uppermost aquifer is dynamic and influenced by seasonal changes in the water level in the adjacent Mississippi and Missouri Rivers, which affect water levels, gradients and flow directions in these water bodies. Groundwater in the alluvial aquifer will generally flow from the higher of the two rivers toward the lower elevation river. Water flows into and out of the alluvial aquifer as a result of fluctuating river water levels that produce “bank recharge” and “bank discharge” conditions. At this facility, groundwater can flow north and south toward the Mississippi and Missouri Rivers, depending on river levels.

Groundwater flow direction and hydraulic gradient at the SEC were estimated for the alluvial aquifer wells using commercially available software to evaluate data since 2016. Results indicate that groundwater flow direction at the SEC is variable due to fluctuating river levels but has most often flowed from north to south. The overall net groundwater flow direction in the alluvial aquifer at the SEC was south-southeast in 2023 as a result of river levels in the Missouri and Mississippi Rivers. From 2016 through 2022, horizontal gradients have ranged from 0.00006 to 0.001 feet/foot with an estimated net annual groundwater movement of approximately four feet per year in the prevailing downgradient direction. Since July 2022, due to low Missouri River levels, there has been a more prevalent southward flow direction at a rate of approximately 35 feet per year.

## 2.7 Sampling Issues

No notable sampling issues were encountered at the SCPA in 2023

# 3.0 ACTIVITIES PLANNED FOR 2024

---

Detection Monitoring is scheduled to continue on a semi-annual basis in the second and fourth quarters of 2024. Statistical analysis of the November 2023 Detection Monitoring data will be completed in 2024 and will be included in the 2024 Annual Report.

As part of Phase 2 of the Remedy Selection Report's corrective measures remedial plan, Corrective Action Monitoring is scheduled to continue on a semi-annual basis in the second and fourth quarters of 2024. Statistical analyses of the November 2023 Corrective Action Monitoring data will be completed in 2024 and will be included in the 2024 Annual Report. Monitoring and statistical evaluation of the corrective measures will be completed in accordance with the corrective measures remedial plan discussed in the Remedy Selection Report.

Evaluation of the effectiveness of Corrective Action and Corrective Measures (groundwater treatment) on CCR constituent concentrations in groundwater will continue in 2024 and be included in the 2024 Annual Report.

**NOTES**

1. Unit Abbreviations: µg/L - micrograms per liter, mg/L - milligrams per liter, SU - standard units, pCi/L - picocuries per liter, mV - millivolts, mS/cm - millisiemens per centimeter, and NTU - nephelometric turbidity units.
2. J - Result is an estimated value.
3. NA - Not Applicable.
4. ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.
5. Radium [226 + 228] is reported as the sum of the Radium 226 and the Radium 228 activity concentrations unless the sum of the Radium 226 and Radium 228 Minimum Detectable Concentrations (MDC) is higher in which case it is displayed as ND.

NOTES

- Unit Abbreviations: µg/L - micrograms per liter, mg/L - milligrams per liter, SU - standard units, pCi/L - picocuries per liter, mV - millivolts, mS/cm - millisiemens per centimeter, and NTU - nephelometric turbidity units.
- J - Result is an estimated value.
- ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.
- Radium [226 + 228] is reported as the sum of the Radium 226 and the Radium 228 activity concentrations unless the sum of the Radium 226 and Radium 228 Minimum Detectable Concentrations (MDC) is higher in which case it is displayed as ND.
- NA - Not Applicable.

### Laboratory Analytical Data

June 19, 2023

Mark Haddock  
Rocksmith Geoengineering, LLC.  
5233 Roanoke Drive  
Saint Charles, MO 63304

RE: Project: AMEREN SCPA  
Pace Project No.: 60427704

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory between May 03, 2023 and May 10, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church  
jamie.church@pacelabs.com

## QUALIFIERS

Project: AMEREN SCPA  
Pace Project No.: 60427704

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.  
Act - Activity  
Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).  
Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)  
(MDC) - Minimum Detectable Concentration  
Trac - Tracer Recovery (%)  
Carr - Carrier Recovery (%)  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- 1e Ferrous Iron result is greater than the total Iron. Data is within laboratory control limits.
- B Analyte was detected in the associated method blank.
- H6 Analysis initiated outside of the 15 minute EPA required holding time.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- R1 RPD value was outside control limits.

Container Codes

Glass	Plastic	Misc.
DG9B 40mL bisulfate clear vial	WGKU 8oz clear soil jar	BP1C 1L NaOH plastic
DG9H 40mL HCl amber vial	WGFU 4oz clear soil jar	BP1N 1L HNO3 plastic
DG9M 40mL MeOH clear vial	WG2U 2oz clear soil jar	BP1S 1L H2SO4 plastic
DG9Q 40mL TSP amber vial	JGFU 4oz unpreserved amber wide	BP1U 1L unpreserved plastic
DG9S 40mL H2SO4 amber vial	AGOU 100mL unores amber glass	BP1Z 1L NaOH, Zn Acetate
DG9T 40mL Na Thio amber vial	AG1H 1L HCl amber glass	BP2C 500mL NaOH plastic
DG9U 40mL amber unpreserved	AG1S 1L H2SO4 amber glass	BP2N 500mL HNO3 plastic
VG9H 40mL HCl clear vial	AG1T 1L Na Thiosulfate clear/amber glass	BP2S 500mL H2SO4 plastic
VG9J 40mL Na Thio clear vial	AG1U 1liter unpres amber glass	BP2U 500mL unpreserved plastic
VG9U 40mL unpreserved clear vial	AG2N 500mL HNO3 amber glass	BP2Z 500mL NaOH, Zn Acetate
BG1S 1liter H2SO4 clear glass	AG2S 500mL H2SO4 amber glass	BP3C 250mL NaOH plastic
BG1U 1liter unpres glass	AG3S 250mL H2SO4 amber glass	BP3F 250mL HNO3 plastic - field filtered
BG3H 250mL HCl Clear glass	AG2U 500mL unpres amber glass	BP3N 250mL HNO3 plastic
BG3U 250mL Unpres Clear glass	AG3U 250mL unpres amber glass	BP3U 250mL unpreserved plastic
WGDU 16oz clear soil jar	AG4U 125mL unpres amber glass	BP3S 250mL H2SO4 plastic
	AG5U 100mll unpres amber glass	BP3Z 250mL NaOH, Zn Acetate
		BP4U 125mL unpreserved plastic
		BP4N 125mL HNO3 plastic
		BP4S 125mL H2SO4 plastic
		WPDU 16oz unpreserved plastic
		DW Drinking Water

# Memorandum

## June 27, 2023

**To:** Project File  
Rocksmith Geoengineering, LLC **Project Number:** 23009

**CC:** Mark Haddock, Jeffrey Ingram

**From:** Grant Morey **Email:** Grant.Morey@Rocksmithgeo.com

**RE:** Data Validation Summary, Sioux Energy Center – SCPA – Data Package 60427704

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was analyzed outside of hold time, the sample result was qualified as an estimate (J for detects, UJ for non-detects).
  - When a compound was detected in a blank (i.e. method, field), and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
  - When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).
  - When a duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
  - When a matrix spike/matrix spike duplicate (MS/MSD) criterion was not met, the associated sample result was qualified as an estimate (J, J+ for estimates based high, and J- for estimates based low).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Rocksmith Geoengineering  
 Project Name: Ameren SCPA  
 Reviewer: G. Morey

c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes

**Comments/Notes:**

General:

Ferrous iron samples were all analyzed outside of hold time. Results qualified as estimates.

Chloride and/or Sulfate were diluted in several samples; no qualification necessary.

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

### Comments/Notes:

#### Method Blanks:

3349216: Calcium (28.7J), Iron (9.3J), and Manganese (1.1J). Associated with samples -001 though -006.

Sample results > RL and 10x blank: no qualification.

3349221: Chromium (0.37J). Associated with samples -001 through -006. Sample results that are < RL, report at RL and qualify as non-detect.

3363902: Chloride (0.72J). Associated with sample -008. Sample result > RL and 10x blank, no qualification.

2863939: Radium-228 ( $0.933 \pm 0.437$ ). Associated with samples -007 through -012. All results non-detects, no qualification necessary.

#### Field Blanks:

S-UMW-FB-1 @ S-UMW-6D: Boron (11.4J), Molybdenum (1.4J), Chromium (0.36J), TDS (19.0), Ferric Iron (0.0081J), Chloride (0.55J). Most results > RL and 10x blank, no qualification necessary. Chromium qualified as non-detect, Chloride qualified as estimate.

#### Duplicates:

S-UMW-DUP-1 @ S-UMW-2D: DUP RPD exceeds limit (20%) for Chromium (22%) and Radium-228 (27%), results qualified as estimates. Beryllium detected in original sample, not detected in duplicate: results qualified as estimates.

Lab duplicate max RPD: 10%: Alkalinity, TDS; 15%: Chloride, Fluoride, Sulfate; 20%: Ferrous Iron, Sulfide

#### MS/MSD:

3350825/3350826: MS recovery high for Sulfide and RPD outside of control limits for Sulfide. Associated with sample -001. Result is a non-detect, no further qualification necessary.

3361731/3361732: MSD recovery high for Sulfate; only 1 QC indicator out, no qualification necessary.

3363887/3363888: MS/MSD recovery low for Chloride, MS recovery high for Sulfate. Associated with unrelated sample, no qualification necessary.

3363889/3363890: MSD recovery high and RPD exceeds limits for Chloride, MS/MSD recovery low for Fluoride, MSD recovery high for Sulfate. Associated with unrelated sample, no qualification necessary.

3363905/3363906: Associated with sample -008. MSD recovery high and RPD exceeds control limits for Fluoride, result qualified as estimate. MSD recovery high for Sulfate, only 1 QC indicator out, no qualification necessary.

RE: Project: AMEREN SCPA-CA  
Pace Project No.: 60427703

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory between May 03, 2023 and May 10, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church  
jamie.church@pacelabs.com

## QUALIFIERS

Project: AMEREN SCPA-CA

Pace Project No.: 60427703

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

1e Ferrous Iron result is greater than the total Iron. Data is within laboratory control limits.

B Analyte was detected in the associated method blank.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

H1 Analysis conducted outside the EPA method holding time.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

R1 RPD value was outside control limits.

WO# : 60427703

DC#\_Title: ENV-FRM-LENE-0009\_Sample C

Revision: 2

Effective Date: 01/12/2022

60427703

Issued By: Lenexa

Client Name: Rocksmith GeotechCourier: FedEx  UPS  VIA  Clay  PEX  ECI  Pace  Xroads  Client  Other Tracking #: \_\_\_\_\_ Pace Shipping Label Used? Yes  No Custody Seal on Cooler/Box Present: Yes  No  Seals intact: Yes  No Packing Material: Bubble Wrap  Bubble Bags  Foam  None  Other Thermometer Used: T 299 Type of Ice: Wet Blue NoneCooler Temperature (°C): As-read 0.1/0.4/6 Corr. Factor +0.2 Corrected 0.9/0.5/1.8Temperature should be above freezing to 6°C 12-11.9/14.6

Date and initials of person examining contents:

PV513/23

Chain of Custody present:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Chain of Custody relinquished:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Samples arrived within holding time:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Short Hold Time analyses (<72hr):	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Rush Turn Around Time requested:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Sufficient volume:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Correct containers used:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Pace containers used:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Containers intact:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Unpreserved 5035A / TX1005/1006 soils frozen in 48hrs?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
Filtered volume received for dissolved tests?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
Sample labels match COC: Date / time / ID / analyses	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Samples contain multiple phases? Matrix: <u>WT</u>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
Containers requiring pH preservation in compliance? (HNO <sub>3</sub> , H <sub>2</sub> SO <sub>4</sub> , HCl<2; NaOH>9 Sulfide, NaOH>10 Cyanide) (Exceptions: VOA, Micro, O&G, KS TPH, OK-DRO)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A LOT#: <u>67181/62011</u>
Cyanide water sample checks:	List sample IDs, volumes, lot #'s of preservative and the date/time added.
Lead acetate strip turns dark? (Record only)	<input type="checkbox"/> Yes <input type="checkbox"/> No
Potassium iodide test strip turns blue/purple? (Preserve)	<input type="checkbox"/> Yes <input type="checkbox"/> No
Trip Blank present:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
Headspace in VOA vials (>6mm):	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
Samples from USDA Regulated Area: State:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
Additional labels attached to 5035A / TX1005 vials in the field?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A

# Memorandum

## June 28, 2023

**To:** Project File  
Rocksmith Geoengineering, LLC **Project Number:** 23009

**CC:** Mark Haddock, Jeffrey Ingram

**From:** Grant Morey **Email:** Grant.Morey@Rocksmithgeo.com

**RE:** Data Validation Summary, Sioux Energy Center – SCPA-CA – Data Package 60427703

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was analyzed outside of hold time, the sample result was qualified as an estimate (J for detects, UJ for non-detects).
  - When a compound was detected in a blank (i.e. method, field), and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
  - When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).
  - When a duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
  - When a matrix spike/matrix spike duplicate (MS/MSD) criterion was not met, the associated sample result was qualified as an estimate (J, J+ for estimates based high, and J- for estimates based low).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

b) Was MSD accuracy criteria met?  Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes
c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes

### Comments/Notes:

General:

Ferrous iron samples were all analyzed outside of hold time. Results qualified as estimates.

Chloride and/or Sulfate were diluted in several samples; no qualification necessary.

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

### Comments/Notes:

#### Method Blanks:

3349216: Calcium (28.7J), Iron (9.3J), and Manganese (1.1J). Associated with samples -001 through -008.

Sample results > RL and 10x blank: no qualification.

3354610: Boron (7.1J). Associated with samples -009 through -023. Boron results that are < RL are qualified as non-detects at the RL.

3349221: Chromium (0.37J). Associated with samples -001 through -008. Chromium results that are < RL are qualified as non-detects at the RL.

2863939: Radium-228 ( $0.933 \pm 0.437$ ). Associated with samples -017 through -025. Sample -022 qualified as estimate.

Other results non-detects, no qualification necessary.

#### Field Blanks:

S-CA-FB-1 @ S-TP-3D: Sulfide (0.018J) and Chloride (0.54J). Sulfide result is a non-detect and Chloride result > RL and 10 blank, no qualification necessary.

S-CA-FB-2 @ S-PZ-9D: Ferric Iron (0.0035J). Result > RL and 10x blank, no qualification necessary.

#### Duplicates:

S-CA-DUP-1 @ S-TP-2D: RPD exceeds control limits for Chloride (24%) and Sulfate (60%); results qualified as estimates.

Molybdenum detected in original sample but not in duplicate, results qualified as estimates

S-CA-DUP-2 @ S-TP-6D: RPD exceeds control limits for Ferrous Iron (20%), results qualified as estimates.

Chromium and Molybdenum detected in duplicate but not original sample, results qualified as estimates.

Radium-226 and Radium-228 results detected in original sample but not in duplicate, results qualified as estimates.

3356880: TDS lab duplicate RPD (131%) exceeds control limit, associated with unrelated sample, no qualification necessary.

Lab duplicate max RPD: 10%: Alkalinity, TDS; 15%: Chloride, Fluoride, Sulfate; 20%: Ferrous Iron, Sulfide

#### MS/MSD:

3354613/3354614: MSD recovery low for Calcium, MS recovery and RPD within control limits. No qualification necessary.

3350825/3350826: MS recovery high and RPD outside control limits for Sulfide, associated with unrelated sample, no qualification necessary.

3363887/3363888: MS/MSD recovery low for Chloride, MS recovery high for Sulfate. Associated with unrelated sample, no qualification necessary.

3356855/3356856: MS/MSD recoveries low for Sulfide (2%). Because spike recovery is below 10% and original result was a non-detect, this result is rejected (R).

3361731/3361732: MSD recovery high for Sulfate, MS recovery and RPD within control limits

3363887/3363888: MS/MSD recovery low for Chloride, MS recovery high for Sulfate, associated with unrelated sample, no qualification necessary.

3363889/3363890: Associated with sample -022. MSD recovery high and RPD out of control limits for Chloride, result qualified as estimate. MS/MSD recovery low for Fluoride, result qualified as estimate. MSD recovery high for Sulfate, MS recovery and RPD within control limits, no qualification necessary.

RE: Project: AMEREN-VERIFICATION, SCPA  
Pace Project No.: 60432860

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory on July 12, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: AMEREN-VERIFICATION, SCPA

Pace Project No.: 60432860

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: AMEREN SCPA  
Pace Project No.: 60441898

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory between November 11, 2023 and November 15, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: AMEREN SCPA

Pace Project No.: 60441898

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

1e Achieving a constant weight was not met for this sample.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

H1 Analysis conducted outside the EPA method holding time.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

**RE: Data Validation Summary, Sioux Energy Center – SCPA – Data Package 60441898**

---

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was analyzed outside of hold time, the sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).
- When a duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).
- When a Laboratory Control Sample (LCS) criterion was not met, the associated sample result was qualified as an estimate (J, J+ for estimates based high, and J- for estimates based low).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Rocksmith Geoengineering  
 Project Name: Ameren SCPA  
 Reviewer: G. Morey

 Project Number: 23009  
 Validation Date: 1/22/2024

Laboratory: Pace Analytical

SDG #: 60441898

Analytical Method (type and no.): EPA 200.7/200.8 (Total Metals); SM 2320B (Alkalinity); SM 2540C (TDS); EPA 300.0 (Anions);

Matrix:  Air  Soil/Sed.  Water  Waste  EPA 903.1/904.0 (Radium 226+228)

Sample Names S-UMW-2D, S-UMW-3D, S-UMW-4D, S-UMW-5D, S-UMW-6D, S-BMW-1D, S-BMW-3D, S-UMW-DUP-1,  
 S-UMW-MS-1, S-UMW-MSD-1, S-UMW-1D, S-UMW-FB-1

**NOTE:** Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	11/10/2023 - 11/14/2023
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	GTM, JSI
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Grab
f) Field QC noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	See Notes
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	pH, Spec Cond, Turb, Temp, DO, ORP
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
j) Does the laboratory narrative indicate deficiencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No lab narrative.
Note Deficiencies:	<hr/> <hr/>			

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Were hold times met for sample analysis?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
e) Were appropriate reporting limits achieved?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
f) Were any sample dilutions noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	See Notes
g) Were any matrix problems noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	S-UMW-FB-1 @ S-UMW-1D
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
 <b>Laboratory Control Sample (LCS)</b>	<b>YES</b>	<b>NO</b>	<b>NA</b>	<b>COMMENTS</b>
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Were the proper analytes included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Was the LCS accuracy criteria met?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes
 <b>Duplicates</b>	<b>YES</b>	<b>NO</b>	<b>NA</b>	<b>COMMENTS</b>
a) Were field duplicates collected (note original and duplicate sample names)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	S-UMW-DUP-1 collected @ S-UMW-2D
b) Were field dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	See Notes
d) Were lab dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes
 <b>Blind Standards</b>	<b>YES</b>	<b>NO</b>	<b>NA</b>	<b>COMMENTS</b>
a) Was a blind standard used (indicate name, analytes included and concentrations)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
 <b>Matrix Spike/Matrix Spike Duplicate (MS/MSD)</b>	<b>YES</b>	<b>NO</b>	<b>NA</b>	<b>COMMENTS</b>
a) Was MS accuracy criteria met?  Recovery could not be calculated since sample contained high concentration of analyte?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Was MSD accuracy criteria met?  Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes
c) Were MS/MSD precision criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

### Comments/Notes:

General:

Chloride, fluoride, and or sulfate analyzed outside of hold time controls in several samples, results qualified as estimates.

Chloride and/or sulfate were diluted in several samples; no qualification necessary.

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

**Comments/Notes:**

Laboratory Control Samples:

3471853: LCS recovery high for fluoride, associated with samples -001 through -008 and -011. Detected results qualified as estimates, non-detect results not qualified.

3473824: LCS recovery high for fluoride, associated with sample -012. Result is a non-detect, no qualification necessary.

S-UMW-DUP-1 @ S-UMW-2D: Field duplicate RPD exceeds control limit for TDS (28%), results qualified as estimates.

3462672: Laboratory duplicate RPD exceeds control limit for TDS, associated with unrelated sample, no qualification necessary.

Lab duplicate max RPD: 10%: Alkalinity, TDS; 15%: Chloride, Fluoride, Sulfate

MS/MSD:

3467868/3467869: MSD recovery high for calcium, MS recovery and RPD within control limits, no qualification necessary.

3469021/3469022: MSD recovery high for fluoride, MS recovery and RPD within control limits, no qualification necessary.

RE: Project: AMEREN SCPA-CA  
Pace Project No.: 60441897

Dear Mark Haddock:

Enclosed are the analytical results for sample(s) received by the laboratory between November 11, 2023 and November 15, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Kansas City
- Pace Analytical Services - Greensburg

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church  
jamie.church@pacelabs.com

## QUALIFIERS

Project: AMEREN SCPA-CA

Pace Project No.: 60441897

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- 1e Achieving a constant weight was not met for this sample.
- 2e Achieving a constant weight was not met for this sample.. .
- 3e Achieving a constant weight was not met for this sample..
- D6 The precision between the sample and sample duplicate exceeded laboratory control limits.
- E Analyte concentration exceeded the calibration range. The reported result is estimated.
- H1 Analysis conducted outside the EPA method holding time.
- L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

# Memorandum

## January 22, 2024

**To:** Project File  
Rocksmith Geoengineering, LLC **Project Number:** 23009

**CC:** Mark Haddock, Jeffrey Ingram

**From:** Grant Morey **Email:** Grant.Morey@Rocksmithgeo.com

**RE:** Data Validation Summary, Sioux Energy Center – SCPA-CA – Data Package 60441897

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was analyzed outside of hold time, the sample result was qualified as an estimate (J for detects, UJ for non-detects).
  - When a compound was detected in a blank (i.e. method, field), and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
  - When a compound was detected in a sample result between the Method Detection Limit (MDL) and Practical Quantification Limit (PQL), the results were recorded at the detection value and qualified as estimates (J).
  - When a duplicate criterion was not met, the associated sample result was qualified as an estimate (J for detects, UJ for non-detects).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Rocksmith Geoengineering  
 Project Name: Ameren SCPA-CA  
 Reviewer: G. Morey

 Project Number: 23009  
 Validation Date: 01/22/2024

Laboratory: Pace Analytical SDG #: 60441897

Analytical Method (type and no.): EPA 200.7/200.8 (Total Metals); SM 2320B (Alkalinity); SM 2540C (TDS); EPA 300.0 (Anions);

Matrix:  Air  Soil/Sed.  Water  Waste  EPA 903.1/904.0 (Radium 226+228)

Sample Names S-BMW-1S, S-BMW-3S, S-AM-1S, S-AM-1D, S-PZ-1S, S-TP-3D, S-TP-6S, S-TP-6D, S-LMW-1S, S-LMW-2S, S-LMW-4S, S-LMW-5S, S-LMW-6S, S-PZ-9D, S-TP-2D, S-TP-4D, S-TP-5D, S-TP-8D, S-UG-3, S-CA-DUP-1, S-CA-DUP-2, S-CA-FB-1, S-CA-FB-2, S-CA-MS-1, S-CA-MSD-1

**NOTE:** Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	11/10/2023 - 11/14/2023
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	GTM/JSI
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Grab
f) Field QC noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	See Notes
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	pH, Spec Cond, Turb, Temp, DO, ORP
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
j) Does the laboratory narrative indicate deficiencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	No lab narrative.
Note Deficiencies:	<hr/> <hr/>			

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Were hold times met for sample analysis?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	See Notes
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
e) Were appropriate reporting limits achieved?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
f) Were any sample dilutions noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	See Notes
g) Were any matrix problems noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
b) Were analytes detected in the field blank(s)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	See Notes
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

### Comments/Notes:

General:

Chloride, fluoride, and sulfate analyzed outside of hold time for several samples. Results qualified as estimates.

Chloride and/or Sulfate were diluted in several samples; no qualification necessary.

## QA LEVEL IV - INORGANIC DATA EVALUATION CHECKLIST

### Comments/Notes:

#### Field Blanks:

S-CA-FB-1 @ S-TP-8D: Boron (8.3J) and Chloride (0.64J). Boron result < RL, qualified as non-detect at PQL. Chloride result > RL and 10x blank, no qualification necessary.

S-CA-FB-2 @ S-PZ-9D: All results are non-detects.

#### Laboratory Control Samples:

3471853: LCS recovery high for fluoride, associated with samples -001 through -008. All results are non-detects, no qualification necessary.

3472120/3474159/3475196: LCS recovery high for fluoride, associated with samples -015 through -033. All results are non-detects, no qualification necessary.

3473824: LCS recovery high for fluoride, associated with samples -009 through -014 and -023. All results are non-detects, no qualification necessary.

#### Duplicates:

S-CA-DUP-1 @ S-TP-4D: Field duplicate RPD exceeds control limit for chloride (30%), sulfate (164%) and TDS (24%). Results qualified as estimates. Cobalt, molybdenum, and radium-226 detected in duplicate and not in parent sample, results qualified as estimates. Radium-228 detected in parent sample and not in duplicate, results qualified as estimates.

S-CA-DUP-2 @ S-TP-5D: Field duplicate RPD exceeds control limit for cobalt (50%), results qualified as estimates.

Chromium detected in field duplicate and not in parent sample, results qualified as estimates.

3472123: Lab duplicate RPD exceeds control limit for sulfate. Associated with unrelated sample, no qualification necessary.

Lab duplicate max RPD: 10%: Alkalinity, TDS; 15%: Chloride, Fluoride, Sulfate; 20%: Ferrous Iron, Sulfide

#### MS/MSD:

3465243/3465244: MS recovery high & MSD recovery low for sodium, associated with unrelated sample, no qualification necessary.

3465245: MS recovery low for sodium, associated with unrelated sample, no qualification necessary.

3467641/3467642: MS/MSD recoveries high for calcium, magnesium, manganese, and sodium. Associated with unrelated sample, no qualifications necessary.

3467868/3467869: MSD recovery high for calcium, MS recovery and RPD within control limits, no qualification necessary.

3469021/3469022: MSD recovery high for fluoride, MS recovery and RPD within control limits, no qualification necessary.

### ASSESSMENT MONITORING STATISTICAL EVALUATION SCPA SURFACE IMPOUNDMENT SIOUX ENERGY CENTER, ST. CHARLES COUNTY, MISSOURI

This Technical Memorandum provides the results of the Assessment Monitoring Statistical Evaluation for the October 2022 sampling event at the SCPA Surface Impoundment of the Sioux Energy Center located in St. Charles County, Missouri. Included in this memorandum is a summary of constituents that are present at a Statistically Significant Level (SSL), a list of site-specific Groundwater Protection Standards (**Table 1**), and the Sanitas Technologies™ (Sanitas) statistical software output for each of the Appendix IV parameters (**Appendix A** and **Appendix B**).

The Appendix IV constituents were evaluated for SSLs using the methods and procedures outlined in the Statistical Analysis Plan (SAP). The following outliers were removed prior to the calculation of confidence limits.

- Arsenic
  - UMW-1D at 2.7 micrograms per liter ( $\mu\text{g}/\text{L}$ ) on 4/14/2021. The result is statistically higher than other results at the same well. The high result is not consistent with previous or subsequent arsenic results at the well and is an outlier.
- Cobalt
  - UMW-5D at 1.7 J  $\mu\text{g}/\text{L}$  on 3/31/2022. The result is statistically higher than other results at the same well. The high result is not consistent with previous or subsequent cobalt results at the well and is an outlier.

An analysis of the outliers removed to-date was completed and two statistical outliers that were previously removed were added back into the dataset prior to the calculation of confidence limits.

- Arsenic
  - UMW-6D at Non-Detect (ND) on 3/8/2017. Was removed in November 2019 as an outlier because the result was statistically lower than other values at the same well. However, based on subsequent sampling the low result was confirmed and the result is no longer an outlier.
- Fluoride

- UMW-3D at 0.32 milligrams per liter (mg/L) on 8/1/2019. Was removed in November 2019 as an outlier because the result was statistically lower than other values at the same well. However, based on subsequent sampling the low result was confirmed and the result is no longer an outlier.

No new SSLs were identified in the October 2022 sampling event. The SSLs reported for the October 2022 monitoring event are as follows:

- Molybdenum at UMW-2D, UMW-3D, UMW-4D, and UMW-5D

WSP appreciates this opportunity to provide hydrogeological and engineering support services to Ameren. If you have any questions or comments regarding the information provided, please call our office at (314) 984-8800.

**Table 1 - SCPA Groundwater Protection Standards**  
**SCPA Surface Impoundment**  
**Sioux Energy Center, St. Charles County, MO**

Parameter	Units	MCL or Health Based GWPS	Site GWPS	Value to Return to Detection Monitoring <sup>6</sup>
Antimony	µg/L	6	6	DQR
Arsenic	µg/L	10	10	0.6933
Barium	µg/L	2000	2000	699
Beryllium	µg/L	4	4	DQR
Cadmium	µg/L	5	5	DQR
Chromium	µg/L	100	100	DQR
Cobalt	µg/L	6	6	DQR
Fluoride	mg/L	4	4	0.403
Lead	µg/L	15	15	DQR
Lithium	µg/L	40	40	28.86
Mercury	µg/L	2	2	DQR
Molybdenum	µg/L	100	100	DQR
Radium 226 + 228	pCi/L	5	5	2.537
Selenium	µg/L	50	50	DQR
Thallium	µg/L	2	2	DQR

Notes:

1. µg/L - micrograms per liter.
2. mg/L - milligrams per liter.
3. pCi/L - picocuries per liter.
4. MCL - Maximum Contaminant Level. MCLs from United States Environmental Protection Agency (USEPA) Drinking Water Standards and Health Advisories.
5. Health Based Groundwater Protection Standards (GWPS) were adopted for Appendix IV parameters without an MCL (i.e. cobalt, lithium, molybdenum, and lead). Information available at <https://www.epa.gov/coalash/coal-ash-rule>.
6. Values were calculated using statistical methods outlined for Detection Monitoring and are used for returning to Detection Monitoring based on available data to date.
7. DQR - Double Quantification Rule. If all baseline data are less than the Practical Quantitation Limit (PQL), then the DQR will be used. More information on the DQR is provided in the Statistical Analysis Plan.
8. Site GWPS is either the MCL/Health Based GWPS or based on background levels (calculated as described in the Statistical Analysis Plan for Assessment Monitoring)
9. GWPS and background values calculated using results through April 2021 from monitoring wells BMW-1D and BMW-3D.

### May 2023 Assessment Monitoring Statistical Evaluation

# Memorandum

## September 15, 2023

## 1.0 INTRODUCTION

This Technical Memorandum provides the results of the Assessment Monitoring Statistical Evaluation for the May 2023 sampling event at the SCPA Surface Impoundment at the Sioux Energy Center located in St. Charles County, Missouri. Included in the memorandum is a brief summary of constituents that are present at a Statistically Significant Level (SSL), a list of site-specific Groundwater Protection Standards (**Table 1**), and the Sanitas Technologies™ (Sanitas) statistical software output for each of the Appendix IV parameters (**Appendix A** and **Appendix B**).

## 2.0 STATISTICAL EVALUATION

The Appendix IV constituents were evaluated for SSLs using the methods and procedures outlined in the Statistical Analysis Plan (SAP). In addition to outliers noted in previous statistical evaluations, the following outliers were removed prior to the calculation of confidence limits:

- Beryllium
    - S-UMW-2D at Non-Detect (<1.0 µg/L) on 3/31/2022: Result is statistically higher than other results at the same well. The high result is not consistent with previous or subsequent beryllium results at the well and is an outlier.
  - Radium 226 + 228
    - S-UMW-2D at 1.876 picocuries per liter (pCi/L) on 10/19/2022: Result is statistically higher than other results at the same well. The high result is not consistent with previous or subsequent radium results at the well and is an outlier.

An analysis of the outliers removed to-date was completed and two statistical outliers that were previously removed were added back into the dataset prior to the calculation of confidence limits.

- Radium 226 + 228
  - S-UMW-3D at 2.298 pCi/L on 9/14/2016: Removed in August 2019 as an outlier because the result was statistically higher than other radium values at the same well. However, based on subsequent sampling results the high result was confirmed and the result is no longer an outlier.
  - S-UMW-4D at 1.396 pCi/L on 7/6/2016: Removed in August 2019 as an outlier because the result was statistically higher than other radium values at the same well. However, based on subsequent sampling results the high result was confirmed and the result is no longer an outlier.

Based on the results from the confidence interval and trend analysis, no new SSLs were noted. SSLs at the SCPA Surface Impoundment as of May 2023 continue to be:

- Molybdenum at S-UMW-2D, S-UMW-3D, S-UMW-4D, and S-UMW-5D

## 3.0 CLOSING

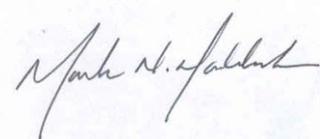

Rocksmith Appreciates this opportunity to provide hydrogeological and engineering support services to Ameren. If you have any questions or comments regarding the information provided, please contact the undersigned.

Sincerely,

**Rocksmith Geoengineering, LLC**

Jeff Ingram, R.G.  
*Senior Geologist, Partner*

Mark Haddock, P.E., R.G.  
*Principal Engineer, Senior Partner*

## Tables

**Table 1 - SCPA Groundwater Protection Standards**  
**SCPA Surface Impoundment**  
**Sioux Energy Center, St. Charles County, MO**

Parameter	Units	MCL or Health Based GWPS	Site GWPS	Value to Return to Detection Monitoring <sup>6</sup>
Antimony	µg/L	6	6	DQR
Arsenic	µg/L	10	10	0.6556
Barium	µg/L	2000	2000	699
Beryllium	µg/L	4	4	DQR
Cadmium	µg/L	5	5	DQR
Chromium	µg/L	100	100	DQR
Cobalt	µg/L	6	6	DQR
Fluoride	mg/L	4	4	0.44
Lead	µg/L	15	15	DQR
Lithium	µg/L	40	40	27.91
Mercury	µg/L	2	2	DQR
Molybdenum	µg/L	100	100	DQR
Radium 226 + 228	pCi/L	5	5	2.537
Selenium	µg/L	50	50	DQR
Thallium	µg/L	2	2	DQR

Notes:

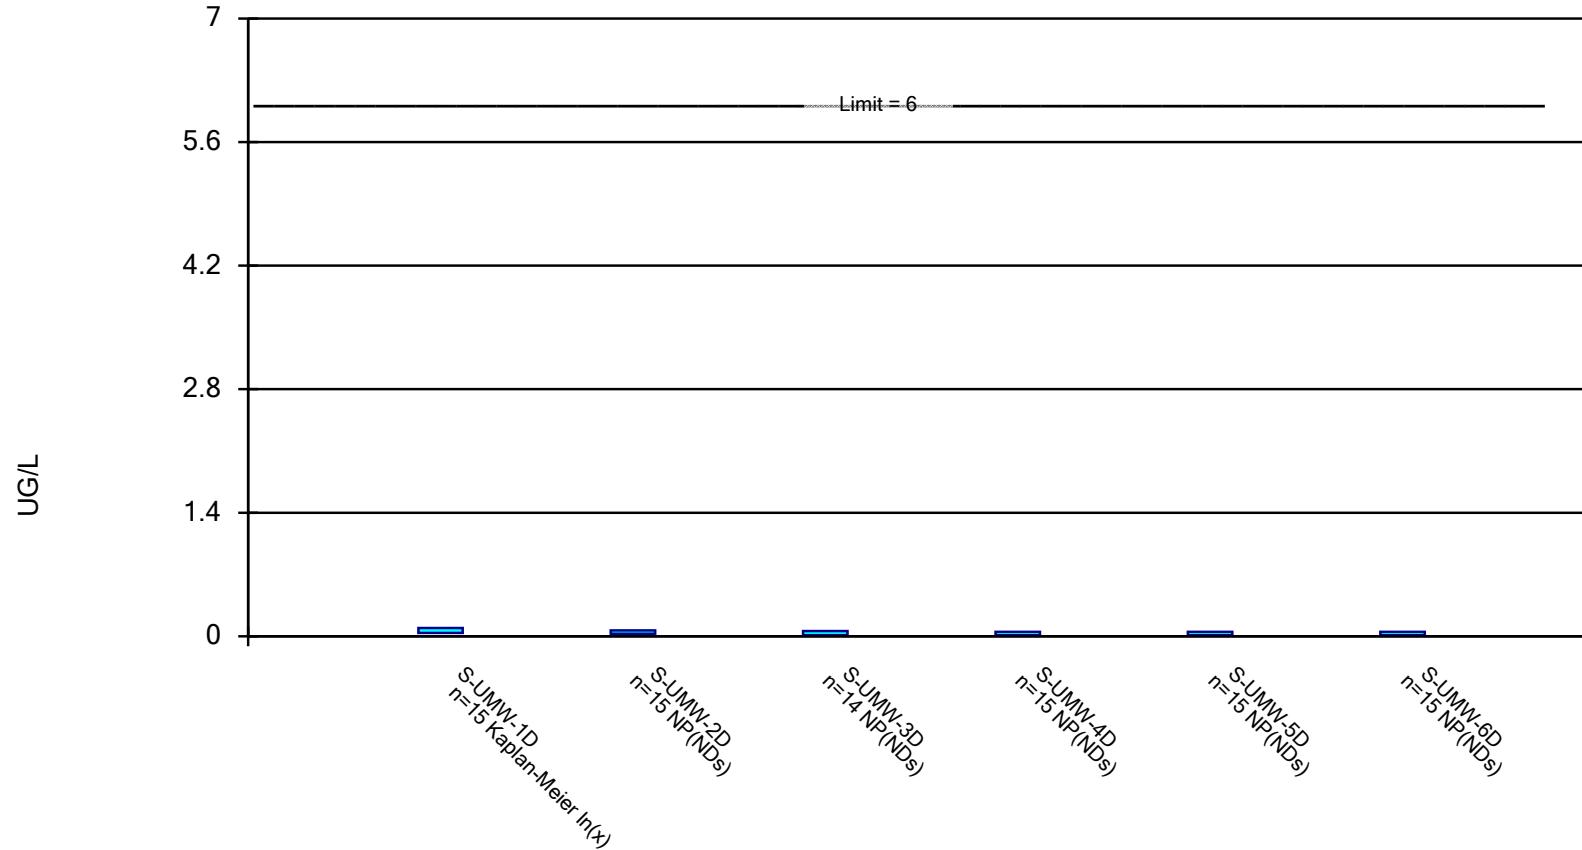

1. µg/L - micrograms per liter.
2. mg/L - milligrams per liter.
3. pCi/L - picocuries per liter.
4. MCL - Maximum Contaminant Level. MCLs from United States Environmental Protection Agency (USEPA) 2012 Edition of the Drinking Water Standards and Health Advisories. Updated January 9, 2023 at <http://water.epa.gov/drink/contaminants/index.cfm>.
5. Health Based Groundwater Protection Standards (GWPS) were adopted for Appendix IV parameters without an MCL (i.e. cobalt, lithium, molybdenum, and lead). Information available at <https://www.epa.gov/coalash/coal-ash-rule>.
6. Values were calculated using statistical methods outlined for Detection Monitoring and are used for returning to Detection Monitoring based on available data to date.
7. DQR - Double Quantification Rule. If all baseline data are less than the Practical Quantitation Limit (PQL), then the DQR will be used. More information on the DQR is provided in the Statistical Analysis Plan.
8. Site GWPS is either the MCL/Health Based GWPS or based on background levels (calculated as described in the Statistical Analysis Plan for Assessment Monitoring), whichever is higher.
9. GWPS and background values calculated using results through May 2023 from monitoring wells BMW-1D and BMW-3D.

## Sen's Slope and 95% Confidence Band

S-UMW-4D

n = 19

Slope = 0.3224  
units per year.

Mann-Kendall  
statistic = 94  
critical = 68

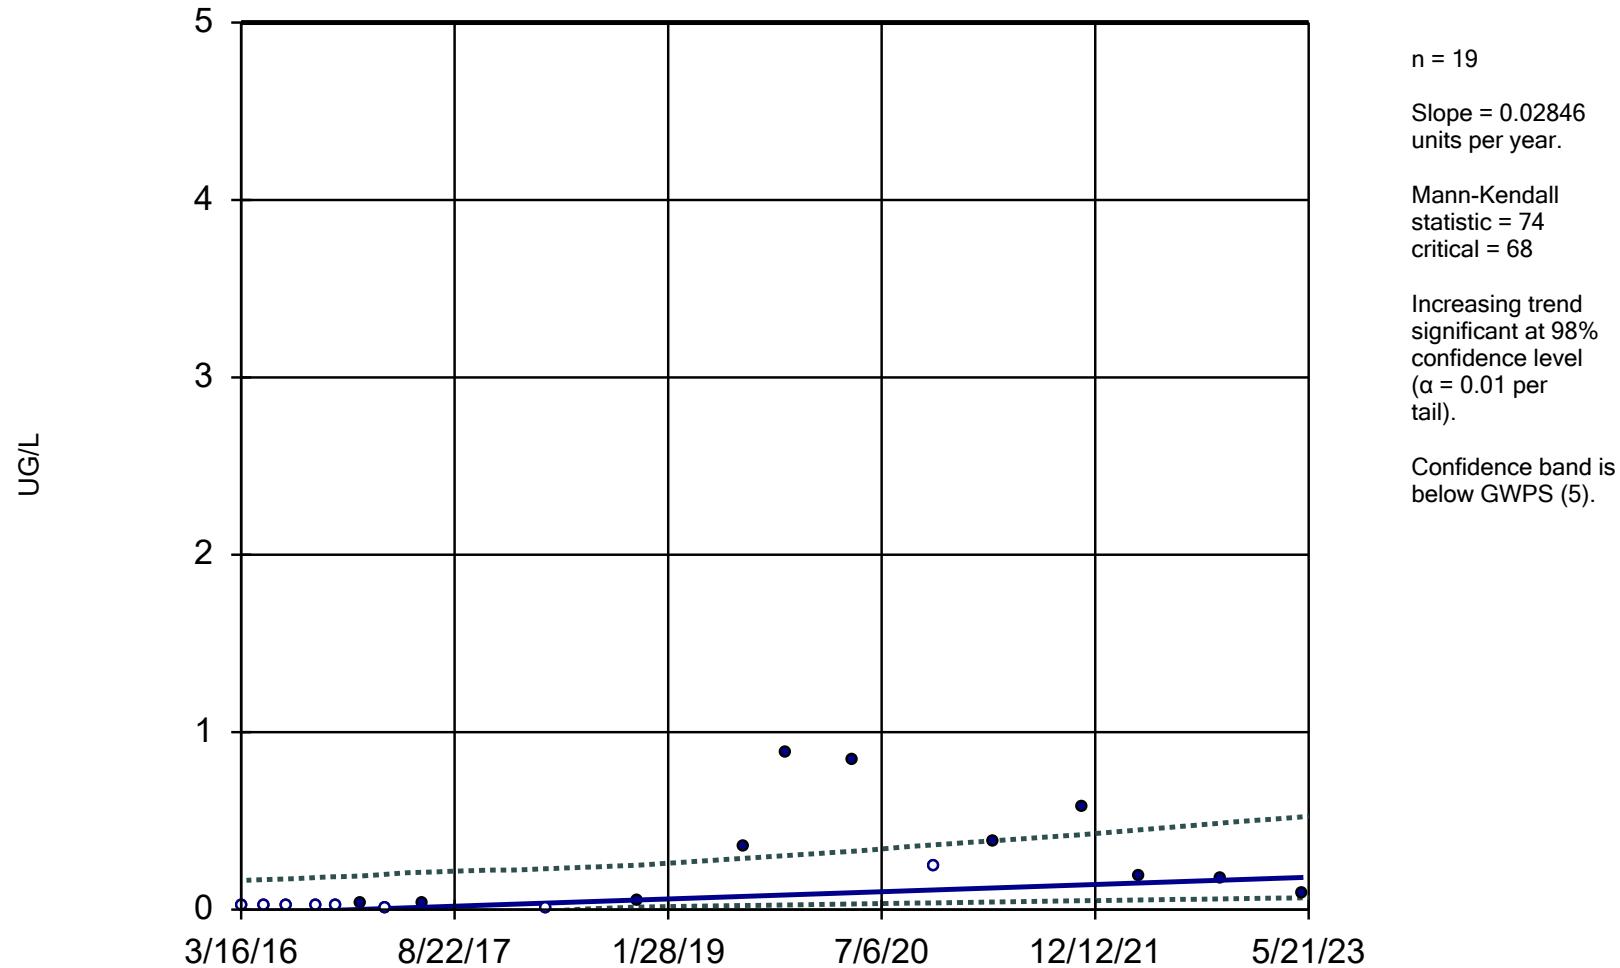

Increasing trend  
significant at 98%  
confidence level  
( $\alpha = 0.01$  per  
tail).

Confidence band is below GWPS (5).

### CORRECTIVE ACTION STATISTICAL EVALUATION SCPA SURFACE IMPOUNDMENT SIOUX ENERGY CENTER, ST. CHARLES COUNTY, MISSOURI

This Technical Memorandum provides the results of the Corrective Action Monitoring statistical analyses from the October 2022 sampling event for the SCPA Surface Impoundment at the Sioux Energy Center located in St. Charles County, Missouri. As outlined in the remedy selection report for the SCPA, Corrective Action at the SCPA consists of two phases:

- 1) Source control, stabilization, and containment of CCR by installation of a low-permeability geomembrane cap.
- 2) Once source control is achieved, monitor the natural attenuation (MNA) of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modeling evaluations to document concentration trends following Corrective Action.

Phase 1 of Corrective Action commenced on January 20, 2021, and substantially completed on April 10, 2022 with the installation of the low permeability cover system. The SCPA unit was certified closed on October 14, 2022 and thus the SCPA has transitioned into the post-closure care requirements of the CCR rule effective October 2022 and Phase 2 of Corrective Action has begun. Included in this memorandum is a summary of constituents that are currently in exceedance of the groundwater protection standard (GWPS), a list of site-specific Groundwater Protection Standards (**Table 1**), and the Sanitas Technologies™ (Sanitas) statistical software output for each of the Appendix IV parameters (**Appendix A**).

The initial Corrective Action sampling event was completed in April 2020, and seven (7) sampling events have been completed in total as a part of the Corrective Action Program at the SEC. Corrective Action statistical analyses cannot be completed until a minimum of four (4) sampling events have been collected during the Corrective Action monitoring period and until Phase 1 of remedy is completed. Thus, the statistical evaluation described herein is the first Corrective Action statistical evaluation and is the first event completed following the end of Phase 1. This analysis uses results collected since the beginning of Corrective Action monitoring (April 2020), as data collected prior to April 2020 was collected during active conditions at the SCPA, prior to the cessation of CCR materials being added to the SCPA and is thus not representative of groundwater conditions since the initiation of closure. Several constituents were reported at concentrations below the practical quantitation limit (PQL) during the April 2020 sampling event including antimony, beryllium, chromium, mercury, and thallium. Because these constituents were not detected during the initial Corrective Action sampling event, they were not re-sampled during the subsequent 2020 semi-annual sampling events in May and November

2020. Like the 2020 sampling event, all Appendix IV parameters were analyzed during the April 2021 event, and several constituents (antimony, lead, mercury, and thallium) were not detected above the PQL during the April 2021 sampling event and therefore, were not collected during the November 2021 sampling event. As with previous sampling events, all Appendix IV parameters were analyzed during the March-April 2022 sampling event, and several constituents (arsenic, beryllium, chromium, lead, mercury, thallium) were not detected above the PQL during the March-April 2022 sampling event, and therefore, were not collected during the October 2022 sampling event.

Confidence intervals have been calculated for each Appendix IV constituent that has at least four (4) data points starting in April 2020. These include: arsenic, barium, beryllium, cadmium, chromium, cobalt, fluoride, lead, lithium, molybdenum, radium 226+228 and selenium. The remaining constituents of antimony, mercury, and thallium do not have the minimum number of applicable data points required to calculate confidence intervals and will be further evaluated once they have the minimum four (4) results.

The Appendix IV constituents were evaluated for exceedances above the GWPS using the methods and procedures outlined in the Corrective Action Groundwater Monitoring Plans (CAGMP) Statistical Analysis Plan (SAP). An outlier analysis was completed as the first step of the statistical evaluation. The outlier analysis included results collected as a part of the Corrective Action monitoring program. The following outliers were removed prior to the calculation of confidence limits.

- Beryllium
  - LMW-6S at 1.2 micrograms per liter ( $\mu\text{g/L}$ ) on 4/14/2021. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent beryllium results at the well and is an outlier.
- Cadmium
  - PZ-1S at 3.5  $\mu\text{g/L}$  on 4/29/2020. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent cadmium results at the well and is an outlier.
- Chromium
  - BMW-1S at Non-Detect (ND) on 4/22/2020. The result is statistically lower than other values at the same well. The low result is not consistent with previous or subsequent chromium results at the well and is an outlier.
  - TP-6D at 2.6 J  $\mu\text{g/L}$  on 4/8/2021. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent chromium results at the well and is an outlier.
  - TP-8D at 9.4  $\mu\text{g/L}$  on 4/14/2021. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent chromium results at the well and is an outlier.
- Cobalt
  - TP-6S at 2.3 J  $\mu\text{g/L}$  on 3/29/2022. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent cobalt results at the well and is an outlier.

- TP-3D at 3.7 J µg/L on 4/1/2022. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent cobalt results at the well and is an outlier.
- TP-4D at 3.7 J µg/L on 4/1/2022. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent cobalt results at the well and is an outlier.
- TP-5D at 1.9 J µg/L on 4/1/2022. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent cobalt results at the well and is an outlier.
- TP-8D at 2.1 J µg/L on 4/4/2022. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent cobalt results at the well and is an outlier.
- Fluoride
  - BMW-1S at ND on 11/8/2021. The result is statistically lower than other values at the same well. The low result is not consistent with previous or subsequent fluoride results at the well and is an outlier.
- Lead
  - TP-2D at 7.7 J µg/L on 4/14/2021. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent lead results at the well and is an outlier.
- Lithium
  - PZ-1S at 21.6 µg/L on 4/29/2020. The result was statistically higher than other values at the same well. The high result is not consistent with previous or subsequent lithium results at the well and is an outlier.
  - BMW-1S, BMW-3S, LMW-5S, LMW-6S, TP-8D, and PZ-1S at ND in November 2021. Analysis of the November 2021 sampling event data revealed that laboratory dilution was required for analysis of the samples. The sample dilutions caused the Method Detection Limit (MDL) to be greater than the Groundwater Protection Standard (GWPS). Based on review of historical data and professional judgement, these results are considered outliers.
- Molybdenum
  - TP-2D at 2.4 J µg/L on 4/29/2020. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent molybdenum results at the well and is an outlier.
  - LMW-6S at 2.4 J µg/L on 11/11/2020. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent molybdenum results at the well and is an outlier.
  - BMW-1S, BMW-3S, TP-6S and UG-3 at ND on 11/16/2020 and 11/17/2020. Analysis of the November 2020 sampling event revealed through data validation that molybdenum was detected in the method blank causing the data to be considered non-detects. The resultant values after data

validation (1/2 the practical quantitation limit) are not consistent with historical results and are outliers.

- TP-6S at 6.9 J µg/L on 11/10/2021. The result is statistically higher than other values at the same well. The high result is not consistent with previous or subsequent molybdenum results and is an outlier.
- BMW-1S, BMW-3S, LMW-4S, and UG-3 at ND in November 2021. Analysis of the November 2021 sampling event revealed through data validation that molybdenum was detected in the method blank causing the data to be considered non-detects. The resultant value after data validation (1/2 the practical quantitation limit) are not consistent with historical results and are outliers.
- Radium 226 + 228
  - PZ-9D at 1.783 picocuries per liter (pCi/L) on 11/12/2020. The result is statistically higher than other values at the same well. The high result is not consistent with previous sampling or subsequent radium 226 + 228 results at the well and is an outlier.
  - BMW-1S at 2.086 pCi/L on 11/16/2020. The result is statistically higher than other values at the same well. The high result is not consistent with previous sampling or subsequent radium 226 + 228 results at the well and is an outlier.
  - TP-8D at 1.493 pCi/L on 4/14/2021. The result is statistically higher than other values at the same well. The high result is not consistent with previous sampling or subsequent radium 226 + 228 results at the well and is an outlier.
- Selenium
  - LMW-1S at 29 µg/L on 6/17/2020. The result is statistically higher than other values at the same well. The high result is not consistent with previous sampling or subsequent selenium results at the well and is an outlier.

Following the removal of outliers, statistical analyses were completed using the methods and procedures outlined in the CAGMPs SAP. The second step in the statistical analysis was to calculate confidence intervals and compare those to the GWPS<sup>1</sup>. As stated above, the confidence intervals shown in **Appendix A** are calculated based on results since April 2020. A summary of constituents exceeding the GWPS at corresponding well(s) is as follows:

- Cobalt at LMW-6S
- Lithium at LMW-5S, TP-2D, and TP-6S
- Molybdenum at LMW-1S<sup>2</sup>, LMW-2S<sup>2</sup>, LMW-5S<sup>2</sup>, AM-1D<sup>2</sup>, AM-1S<sup>2</sup>, TP-5D, PZ-1S<sup>2</sup>

Typically, following the calculation of confidence intervals, trend tests would be completed using the Sen's Slope / Mann Kendall analysis as outlined in the statistical analysis plan. However, Sen's Slope / Mann Kendall analysis require 8 independent sampling results to complete as outlined in the USEPA Unified Guidance. Since only 7 sampling events have occurred since the cessation of CCR disposal into the SCPA, the Sen's Slope / Mann Kendall test cannot be completed. Therefore, no constituent well pairs were determined to have a

<sup>1</sup> The GWPS is the same limit that was used during Assessment Monitoring period, which was the groundwater monitoring phase immediately prior to Corrective Action.

<sup>2</sup> Based on visual (qualitative) review of the data, these data sets are showing an overall downward trend since April 2020.

significant trend and no trend charts are included with this Technical Memorandum. However, a visual/qualitative review of the existing data was performed and those well/constituent combinations showing downward trends were identified (see summary above). The remaining well/constituent combinations are showing no specific trend or possibly slight upward trends. Based on the current sampling schedule, it is anticipated that eight sampling events will be available following the Spring 2023 sampling event, and trend analyses will be completed at that time.

This corrective action statistical report notes exceedances of the GWPS for cobalt, lithium and molybdenum. However, these exceedances are likely due to variability in the initial groundwater sampling results during and directly after the closure of the SCPA. This type of variability is expected, especially at wells nearest the CCR unit, where closure grading and disturbance activities were greatest. The concentrations reported in these preliminary results are expected to decrease over time after closure, as stabilization occurs and supplemental corrective measures are put into service.

WSP appreciates this opportunity to provide hydrogeological and engineering support services to Ameren. If you have any questions or comments regarding the information provided, please call our office at (314) 984-8800.

Parameter	Units	MCL or Health Based GWPS	Site GWPS	Value to Return to Detection Monitoring <sup>6</sup>
Antimony	µg/L	6	6	DQR
Arsenic	µg/L	10	10	0.6933
Barium	µg/L	2000	2000	699
Beryllium	µg/L	4	4	DQR
Cadmium	µg/L	5	5	DQR
Chromium	µg/L	100	100	DQR
Cobalt	µg/L	6	6	DQR
Fluoride	mg/L	4	4	0.403
Lead	µg/L	15	15	DQR
Lithium	µg/L	40	40	28.86
Mercury	µg/L	2	2	DQR
Molybdenum	µg/L	100	100	DQR
Radium 226 + 228	pCi/L	5	5	2.537
Selenium	µg/L	50	50	DQR
Thallium	µg/L	2	2	DQR

Notes:

- 1. µg/L - micrograms per liter.
- 2. mg/L - milligrams per liter.
- 3. pCi/L - picocuries per liter.
- 4. MCL - Maximum Contaminant Level. MCLs from United States Environmental Protection Agency (USEPA) Drinking Water Standards and Health Advisories.
- 5. Health Based Groundwater Protection Standards (GWPS) were adopted for Appendix IV parameters without an MCL (i.e. cobalt, lithium, molybdenum, and lead). Information available at <https://www.epa.gov/coalash/coal-ash-rule>.
- 6. Values were calculated using statistical methods outlined for Detection Monitoring and are used for returning to Detection Monitoring based on available data to date.
- 7. DQR - Double Quantification Rule. If all baseline data are less than the Practical Quantitation Limit (PQL), then the DQR will be used. More information on the DQR is provided in the Statistical Analysis Plan.
- 8. Site GWPS is either the MCL/Health Based GWPS or based on background levels (calculated as described in the Statistical Analysis Plan for Assessment Monitoring), whichever is higher.
- 9. GWPS and background values calculated using results up through April 2021 from monitoring wells BMW-1D and BMW-3D.

**From:** Rocksmith Geoengineering - Mark Haddock, P.E., Jeff Ingram, R.G., Grant Morey   **Email:** Jeff.Ingram@Rocksmithgeo.com

**RE:** **Corrective Action Statistical Evaluation, SCPA Surface Impoundment, Sioux Energy Center, St. Charles County, Missouri**

## 1.0 INTRODUCTION

This Technical Memorandum provides the results of the Corrective Action Monitoring statistical analyses from the May 2023 sampling event for the SCPA Surface Impoundment at the Sioux Energy Center (SEC) located in St. Charles County, Missouri. As outlined in the remedy selection report for the SCPA, Corrective Action at the SCPA consists of two phases, as follows:

- 1) Source control, stabilization, and containment of CCR by installation of a low-permeability geomembrane cap.
  - 2) Once source control is achieved, monitor the natural attenuation (MNA) of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modeling evaluations to document concentration trends following Corrective Action.

Phase 1 of Corrective Action commenced on January 20, 2021, and was substantially completed on April 10, 2022 with the installation of a low permeability cover system. The SCPA unit was certified closed on October 14, 2022 and thus the SCPA has transitioned into the post-closure care requirements of the CCR rule effective October 2022 and Phase 2 of Corrective Action has begun. Included in this memorandum is a brief summary of constituents that are currently in exceedance of the groundwater protection standard (GWPS), a list of site-specific Groundwater Protection Standards (**Table 1**), and the Sanitas Technologies™ (Sanitas) statistical software output for each of the Appendix IV parameters (**Appendix A** and **Appendix B**).

The initial Corrective Action sampling event was completed in April 2020, with a total of eight (8) sampling events completed for the Corrective Action Program at the SCPA to-date. This analysis uses results collected since the beginning of Corrective Action monitoring (April 2020) for the determination of constituents exceeding the GWPS, as data collected prior to this time was collected during active conditions of the SCPA, prior to the cessation of CCR disposal in the SCPA and are not representative of groundwater conditions since the initiation of closure.

Several constituents were reported at concentrations below the Practical Quantitation Limit (PQL) during the spring 2020, 2021, 2022, and/or 2023 sampling events, including antimony, beryllium, chromium, lead, mercury, and thallium. During years when a constituent was reported at concentrations below the PQL in all wells, they were not re-sampled during the subsequent semi-annual sampling event in the fall.

Confidence intervals were calculated in previous Corrective Action statistical evaluations on Appendix IV constituents having at least four independent data points. As of the May 2023 sampling event, there are now at least four results available for each Appendix IV parameter, so this is the first Corrective Action statistical evaluation where confidence intervals could be calculated for antimony, mercury, and thallium, in addition to the remaining Appendix IV parameters.

Additionally, now that 8 rounds of Corrective Action Sampling have been completed, trend tests using the Sen's Slope / Mann Kendall can be completed as outlined in the USEPA Unified Guidance. Therefore, trend tests were completed for the following constituents with at least 8 sampling results: arsenic, barium, cadmium, cobalt, fluoride, lithium, molybdenum, radium 226 + 228, and selenium.

## 2.0 STATISTICAL EVALUATION

The Appendix IV constituents were evaluated for exceedances above the GWPS using the methods and procedures outlined in the Corrective Action Groundwater Monitoring Plan's (CAGMP's) Statistical Analysis Plan (SAP). An outlier analysis was completed as the first step of the statistical evaluation. The outlier analysis was performed only on the results collected as a part of the Corrective Action Monitoring Program. In addition to outliers noted in previous SCPA Corrective Action evaluations, the following outliers were removed prior to the calculation of confidence limits:

- Cadmium
  - S-TP-6D at Non-Detect [< 0.5 micrograms per liter ( $\mu\text{g}/\text{L}$ )] on 10/19/2022. The result is statistically higher than other cadmium values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
- Lead
  - S-TP-3D at 5.9 J  $\mu\text{g}/\text{L}$  on 4/14/2021. The result is statistically higher than other lead values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
  - S-TP-4D at 4.6 J  $\mu\text{g}/\text{L}$  on 4/14/2021. The result is statistically higher than other lead values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
  - S-TP-5D at 5.7 J  $\mu\text{g}/\text{L}$  4/13/2021. The result is statistically higher than other lead values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.
- Lithium
  - S-LMW-5S at 62.8  $\mu\text{g}/\text{L}$  on 4/1/2022. The result is statistically higher than other lithium values at the same well. The high result has not been confirmed during previous or subsequent sampling events and is an outlier.

An analysis of the outliers removed to date was completed and the following statistical outliers that were previously removed were added back into the dataset prior to the calculation of confidence limits:

- Fluoride
  - S-TP-5D at 0.2 J milligrams per liter (mg/L) on 11/9/2021. The result was removed as an outlier in April 2022 because it was statistically lower than other values at the same well. However, based on review of subsequent sampling results, the well displays larger variability in fluoride concentrations than observed with the data available for the April 2022 statistical evaluation. This fluoride result is no longer considered an outlier.

Following the outlier analysis, the second step in the statistical analysis was to calculate confidence intervals and compare those to the site-specific GWPS (**Appendix A**). Confidence interval evaluation was supplemented with Sen's Slope/Mann Kendall analyses on constituents that have eight independent sampling results at a given well, per the USEPA Unified Guidance (**Appendix B**). The Sen's Slope/Mann-Kendall Analysis identifies well-analyte pairs that have statistically significant trends and calculates confidence bands that vary with time. The upper confidence band, in relation to the GWPS for a given constituent, is used to determine exceedances, as outlined in the CAGMP. As discussed previously, antimony, beryllium, chromium, lead, mercury, and thallium do not have the requisite quantity of results to perform Sen's Slope/Mann Kendall analyses, so only confidence intervals were produced for those constituents.

Using these corrective action statistical methods, as of May 2023, the wells with constituents exceeding the GWPS are as follows:

- Cobalt at S-LMW-6S
- Lithium at S-LMW-5S, S-TP-2D, and S-TP-6S
- Molybdenum at S-LMW-2S, S-LMW-5S, S-AM-1D, S-AM-1S, S-TP-5D, and S-PZ-1S

Molybdenum at S-LMW-1S is no longer an exceedance as of May 2023, as the results are present at a statistically significant slope and upper confidence limit is below the GWPS using the Sen's Slope trend analysis. All other cobalt, lithium, and molybdenum exceedances previously identified in October 2022 remain as of this evaluation.

Variability in the initial groundwater sampling results during and directly after the closure of the SCPA is expected, especially at wells nearest the CCR unit, where closure grading and disturbance activities were greatest. The concentrations reported in these results following closure are expected to be variable but are expected to decrease over time as stabilization occurs and supplemental corrective measures are put into service.

## 3.0 CLOSING

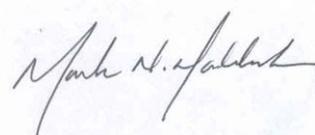

Rocksmith appreciates this opportunity to provide hydrogeological and engineering support services to Ameren. If you have any questions or comments regarding the information provided, please contact the undersigned.

Sincerely,

**Rocksmith Geoengineering, LLC**

## Tables

**Table 1 - SCPA Groundwater Protection Standards**  
**SCPA Surface Impoundment**  
**Sioux Energy Center, St. Charles County, MO**

Parameter	Units	MCL or Health Based GWPS	Site GWPS	Value to Return to Detection Monitoring <sup>6</sup>
Antimony	µg/L	6	6	DQR
Arsenic	µg/L	10	10	0.6556
Barium	µg/L	2000	2000	699
Beryllium	µg/L	4	4	DQR
Cadmium	µg/L	5	5	DQR
Chromium	µg/L	100	100	DQR
Cobalt	µg/L	6	6	DQR
Fluoride	mg/L	4	4	0.44
Lead	µg/L	15	15	DQR
Lithium	µg/L	40	40	27.91
Mercury	µg/L	2	2	DQR
Molybdenum	µg/L	100	100	DQR
Radium 226 + 228	pCi/L	5	5	2.537
Selenium	µg/L	50	50	DQR
Thallium	µg/L	2	2	DQR

Notes:

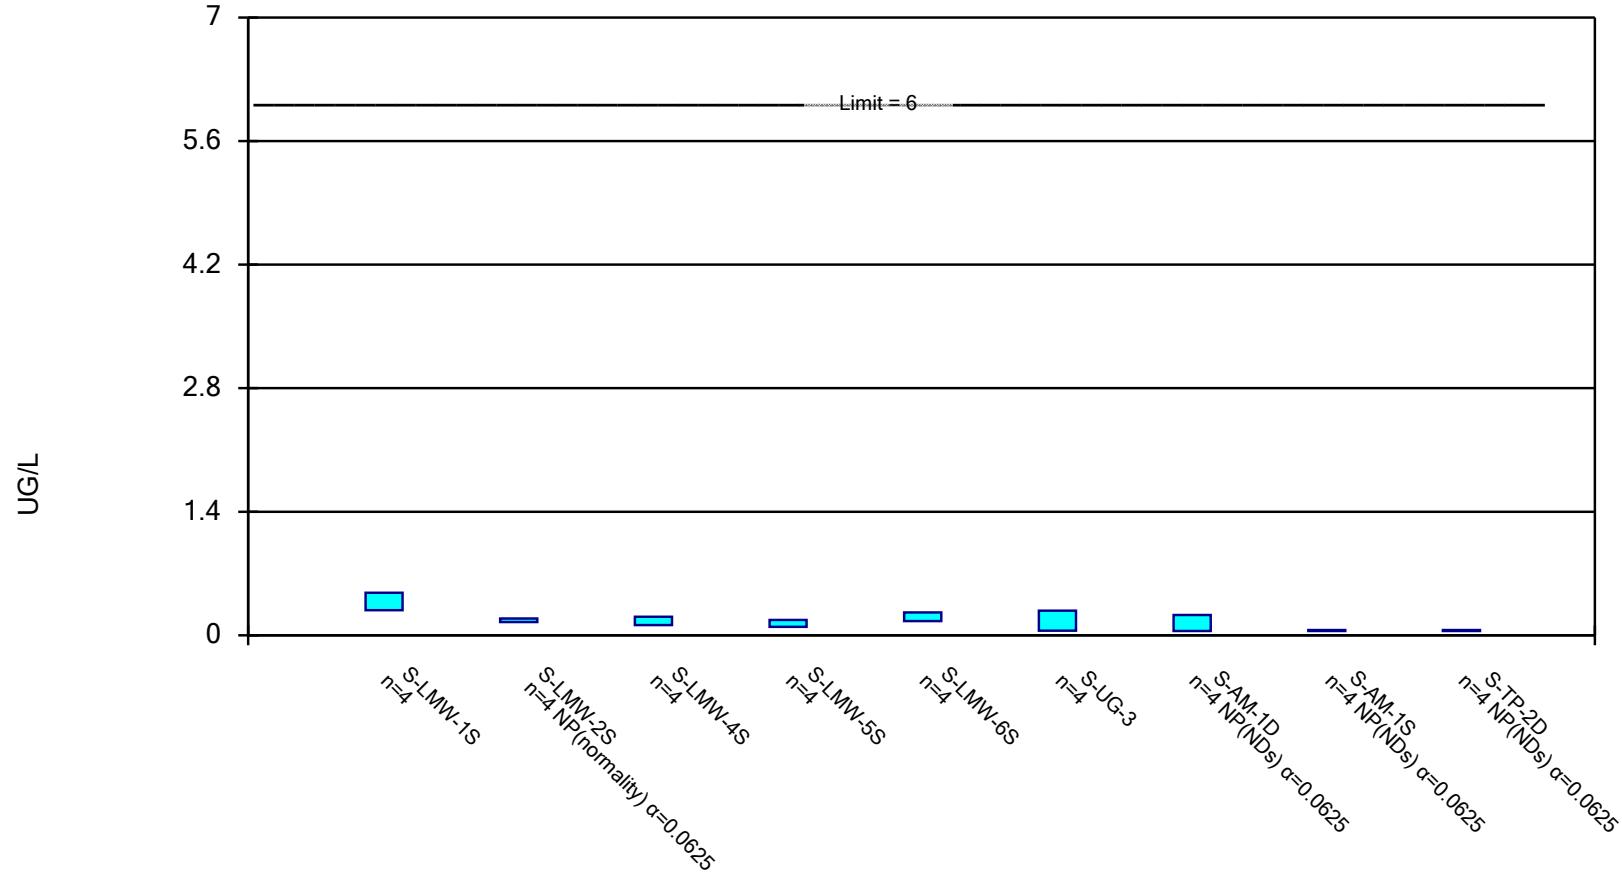

1. µg/L - micrograms per liter.
2. mg/L - milligrams per liter.
3. pCi/L - picocuries per liter.
4. MCL - Maximum Contaminant Level. MCLs from United States Environmental Protection Agency (USEPA) 2012 Edition of the Drinking Water Standards and Health Advisories. Updated January 9, 2023 at <http://water.epa.gov/drink/contaminants/index.cfm>.
5. Health Based Groundwater Protection Standards (GWPS) were adopted for Appendix IV parameters without an MCL (i.e. cobalt, lithium, molybdenum, and lead). Information available at <https://www.epa.gov/coalash/coal-ash-rule>.
6. Values were calculated using statistical methods outlined for Detection Monitoring and are used for returning to Detection Monitoring based on available data to date.
7. DQR - Double Quantification Rule. If all baseline data are less than the Practical Quantitation Limit (PQL), then the DQR will be used. More information on the DQR is provided in the Statistical Analysis Plan.
8. Site GWPS is either the MCL/Health Based GWPS or based on background levels (calculated as described in the Statistical Analysis Plan for Assessment Monitoring), whichever is higher.
9. GWPS and background values calculated using results through May 2023 from monitoring wells BMW-1D and BMW-3D.

## 1.0 CERTIFICATION STATEMENT

This SCPA Corrective Action – Alternative Source Demonstration, Sioux Energy Center, St. Charles County, Missouri, USA has been prepared to comply with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule under the direction of a licensed professional engineer with Rocksmith Geoengineering, LLC.

I hereby certify that this SCPA Corrective Action – Alternative Source Demonstration for Lithium and Cobalt Detections in Isolated Wells, Sioux Energy Center, St. Charles County, Missouri, USA located at 8501 Missouri 94, West Alton, Missouri 63386 has been prepared to meet the requirements of 40 CFR §257.98(a)(1)(i) and 257.95(g)(3)(ii).

**Rocksmith Geoengineering, LLC**

---

Mark Haddock, PE, RG  
Principal Engineer, Senior Partner

## 2.0 INTRODUCTION

---

In accordance with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule (CCR Rule or The Rule, USEPA 2015), Rocksmith Geoengineering, LLC (Rocksmith) has prepared this Technical Memorandum to document an Alternative Source Demonstration (ASD) for a statistical exceedance of the Groundwater Protection Standard (GWPS) calculated for Ameren Missouri's (Ameren) Sioux Energy Center (SEC) Bottom Ash Surface Impoundment (referred to as the SCPA) Corrective Action Monitoring Well Network. This document satisfies the requirements of §257.98(a)(1)(i) and 257.95(g)(3)(ii) which state that at a minimum, the Corrective Action program must meet the requirements of the Assessment Monitoring Program under 257.95. The Assessment Monitoring Program allows the owner or operator to demonstrate that a source other than the CCR Unit has caused a constituent to be at a statistical level exceeding the GWPS, and that the statistical exceedance was the result of an alternative source or resulted from errors in sampling, analysis, statistical evaluation, or natural variation in groundwater quality.

## 3.0 SITE DESCRIPTION AND BACKGROUND

---

The SEC (or Facility) is located approximately 12 miles west-northwest of the confluence of the Mississippi and Missouri Rivers in St. Charles County, Missouri. **Figure 1** depicts the location of the Facility and property boundaries referenced to local features as well as the Mississippi and Missouri Rivers. The Facility encompasses approximately 1,100 acres and is located within the floodplain between the Mississippi and Missouri Rivers. The Facility is bounded to the north by wooded areas associated with the Mississippi River. The property is bounded to the south by a railroad. The Facility is bounded to the east and west by agricultural fields.

### 3.1 Geological and Hydrogeological Setting

Hydrogeologically, the SCPA lies between the Mississippi River to the north and the Missouri River to the south. Flow and deposition from these rivers have resulted in thick alluvial deposits that lie unconformably on top of bedrock. These alluvial deposits, which can range from approximately 100 to 130 feet in thickness, make up the uppermost aquifer called the alluvial aquifer. Overall, this aquifer is described as a fining upwards sequence of stratified sands and gravels with varying amounts of silts and clays. Drilling in the alluvial aquifer identified different sub-units, including floodplain deposits, natural levee deposits, and channel deposits along with volumetrically less important loess deposits. Grain sizes of these alluvial deposits are highly variable.

Beneath the alluvial aquifer lies the bedrock aquifer. Bedrock in this region includes Mississippian-aged rocks of the Meramecian Series. Formations include primarily limestone, dolomite, and shale and are comprised of the Salem Formation overlying the Warsaw Formation and the Burlington-Keokuk Formation.

### 3.2 Coal Combustion Residuals (CCR) SCPA Surface Impoundment

The SCPA is located in the floodplain between the Mississippi and Missouri Rivers and is constructed with perimeter berms at an elevation of approximately 446 feet above mean sea level (feet MSL), which is above the 100-year flood elevation of 437.4 feet MSL. Both fly ash and bottom ash have historically been managed and stored in this CCR unit. Borings completed in the SCPA indicate a CCR thickness of up to approximately 75 feet below ground surface (bgs) around 370 feet MSL in the center of the unit and thinning out towards the edges.

The SCPA is located to the southwest of the SEC plant facilities. The boundary of SCPA extends to within approximately 200 feet of the SEC and is approximately 47 acres in size, as shown in **Figure 1**. Directly to the east of the SCPA is a lined CCR unit called the Fly Ash Surface Impoundment (SCPB). Directly to the south of the SCPA is Highway 94 followed by the Utility Waste Landfill (UWL) and eventually the Missouri River. There are three CCR units currently in the UWL which are Cell 1 (SCPC), Cell 2 (SCPD) and Cell 4A (SCL4A). West of the SCPA lies miles of agricultural land. North of SCPA there are side channels from the adjacent Mississippi River.

### 3.3 CCR Rule Groundwater Monitoring

The CCR Rule published in the Federal Register on April 17, 2015. This rule required CCR surface impoundments and landfills to monitor groundwater around these CCR units. Prior to the first major deadline of October 17, 2017, Ameren completed the following tasks: (1) installation of a groundwater monitoring well system;

(2) a Statistical Method Certification; (3) a Groundwater Monitoring Plan (GMP) that details design, installation, development, sampling procedures, as well as statistical methods; and (4) eight baseline groundwater sampling events for all Appendix III and Appendix IV parameters of the CCR Rule. In November 2017, the first Detection Monitoring event was completed.

The groundwater monitoring system for the SCPA consists of eight monitoring wells screened within the uppermost aquifer (alluvial aquifer), as shown on **Figure 1**. These wells were installed by Golder Associates Inc. (Golder) in 2015 and 2016 for CCR Rule groundwater monitoring purposes. More information regarding the design and installation of the monitoring wells is provided in the SCPA GMP (Golder, 2017) and the SCPA 2017 Annual Report (Golder, 2018).

Between March 2016 and June 2017, eight baseline sampling events were completed for the SCPA. After baseline sampling, Detection Monitoring events have been completed twice a year generally in the second and fourth quarters. In January 2018, background results from the eight baseline sampling events were used to calculate statistical upper prediction limits (UPL). These UPLs were then compared to the Detection Monitoring results. The results of the analysis indicated that there were Statistically Significant Increases (SSIs), and Assessment Monitoring was initiated.

The Assessment monitoring program was established at the SCPA April 15, 2018. Since that time, groundwater sampling and statistical evaluations have been completed semi-annually to determine if there are any values at a Statistically Significant Level (SSL) over the site-specific Groundwater Protection Standard (GWPS). On October 11, 2018, it was determined that Molybdenum was present at an SSL at several wells (UMW-2D, UMW-3D, UMW-4D, UMW-5D). The SSLs determined in Assessment Monitoring have remained the same since that time, and no new SSLs have been determined.

On January 9, 2019, Ameren initiated its Corrective Measures Assessment (CMA) and posted the CMA report on May 20, 2019. A public meeting was held on May 31, 2019, and responses to public comments are posted on Ameren's CCR website. On August 30, 2019, Ameren published its "Remedy Selection Report – 40 CFR § 257.97 Rush Island, Labadie, Sioux and Meramec CCR Basins" (Remedy Selection Report, Ameren 2019) that identified source control through installation of a low permeability cover system, use of Monitored Natural Attenuation (MNA), and installation of Supplemental Corrective Measures as its chosen corrective action remedial plan. The Remedy Selection Report's remedial plan consists of two phases as follows:

- 1) Source control, stabilization and containment of CCR by installation of a low permeability geomembrane cap (a minimum  $1 \times 10^{-7}$  centimeters per second (cm/sec) versus  $1 \times 10^{-5}$  cm/sec required by the CCR Rule).
- 2) Once source control is achieved, monitor the natural attenuation of groundwater concentrations to address limited and localized CCR-related impacts. Ongoing monitoring and modelling evaluations will document that concentrations are decreasing as modelled. MNA occurs due to naturally occurring processes within the aquifer.

As required by the CCR Rule, the following was completed within 90 days of selecting the remedy (November 27 2019): (1) a groundwater monitoring well system was selected and certified by a Professional Engineer, (2) a Statistical Method Certification was prepared and certified by a Professional Engineer, and (3) a Groundwater Monitoring Plan (GMP) was prepared recording the design, installation, development, sampling procedures, as well as statistical methods, and placed in the owners operating record. The Corrective Action Monitoring Well Network consists of 19 groundwater monitoring wells, installed within the shallow, intermediate, and deep zones of the alluvial aquifer as shown on **Figure 1**.

In January 2021, Ameren commenced Phase 1 by initiating closure at the SCPA. Closure of the SCPA has been substantially completed with the completion of the liner cover system on December 21, 2021, and the first Corrective Action sampling event associated with Phase 2 of the Corrective Measures Remedial Plan was

completed in April 2022. On August 3, 2022, corrective action statistical methods<sup>1</sup> were used to determine the following statistical exceedances of the GWPS:

- Cobalt at LMW-6S
- Lithium at LMW-5S, TP-2D, and TP-6S
- Molybdenum at LMW-1S, LMW-2S, LMW-5S, AM-1D, AM-1S, TP-5D, and PZ-1S

Monitoring wells LMW-5S and LMW-6S were installed in December 2015 as part of the CCR Rule monitoring program for the SCPB fly ash surface impoundment. These wells are currently used for both CCR Rule monitoring for the SCPB, as well as Corrective Action monitoring wells. Monitoring wells TP-2D and TP-6S were installed in July 2018 as part of the nature and extent evaluation completed under Assessment Monitoring and they are currently used as Corrective Action monitoring wells.

### 3.4 May 2023 Sampling Event

Following the May 2023 corrective action sampling event, on September 15, 2023, corrective action statistical methods were used to determine these statistical exceedances of the GWPS:

- Cobalt at LMW-6S
- Lithium at LMW-5S, TP-2D, TP-6S
- Molybdenum at LMW-2S, LMW-5S, AM-1D, AM-1S, TP-5D, and PZ-1S

This report further discusses the cobalt and lithium exceedances at the site, and documents why these exceedances are naturally occurring and not caused by impacts originating from the SCPA.

## 4.0 EVIDENCE THAT STATISTICAL EXCEEDANCES OVER GWPS ORIGINATES FROM DIFFERENT SOURCE

---

Several different lines of evidence indicate that the statistical exceedance(s) over the GWPS at monitoring wells LMW-5S, LMW-6S, TP-2D, and TP-6S is not a result of a release from the SCPA but is rather from an alternative source. The following detail the different lines of evidence that support this ASD:

- A lack of correlation between key CCR indicators (boron and molybdenum) and exceedances of lithium and cobalt.
- The presence of lithium and cobalt at similar concentrations in groundwater samples collected upgradient of the SCPA.
- The presence of naturally occurring cobalt and lithium in sediments in background locations at the SCPA.
- Cobalt and lithium are naturally occurring elements in soils and alluvial aquifer sediments that are derived from igneous and metamorphic rocks within the Missouri and Mississippi River watersheds.

---

<sup>1</sup> The statistical testing method used to evaluate the Corrective Action monitoring data is the confidence interval method, which is the same method used during Assessment Monitoring, except the null hypothesis for the confidence intervals is reversed. For Corrective Action, the Unified Guidance states that the appropriate null hypothesis is that the groundwater population (mean) exceeds the GWPS for those constituents that exceed the GWPS under Assessment Monitoring program. Therefore, in Corrective Action the Upper Confidence Limit (UCL) is compared to the Groundwater Protection Standard (GWPS) instead of the Lower Confidence Limit (LCL) [as was used during Assessment Monitoring].

## 4.1 CCR Indicators

Several types of CCR by-products are generated by coal-fired power plants. The different types of CCR typically display distinct geochemical signatures and indicator parameters. **Table 1** describes the different types of CCRs and their typical indicator parameters (USEPA 2018, EPRI 2011, EPRI 2012, and EPRI 2017).

**Table 1: Types of CCR and Typical Indicator Parameters**

Type of CCR	Description of CCR (USEPA 2018)	Key Indicators (EPRI 2011, 2012, 2017)
<b>Fly Ash</b>	Fine grained, powdery material composed mostly of silica made from the burning of finely ground coal in the boiler.	<ul style="list-style-type: none"> <li>■ Boron</li> <li>■ Molybdenum</li> <li>■ Lithium</li> <li>■ Sulfate</li> <li>■ Bromide</li> <li>■ Potassium</li> <li>■ Sodium</li> <li>■ Fluoride</li> </ul>
<b>Boiler Slag / Bottom Ash</b>	Molten bottom ash from the slag tap and cyclone type furnaces that turns into pellets that have a smooth glassy appearance after quenching with water.	<ul style="list-style-type: none"> <li>■ Boron</li> <li>■ Molybdenum</li> <li>■ Lithium</li> <li>■ Sulfate</li> <li>■ Bromide</li> <li>■ Potassium</li> <li>■ Sodium</li> <li>■ Fluoride</li> </ul>
<b>Flue Gas Desulfurization Material (FGD)</b>	A material leftover from the process of reducing sulfur dioxide emissions from a coal-fired boiler that can be a wet sludge consisting of calcium sulfite or calcium sulfate or a dry powdered material that is a mixture of sulfites and sulfates.	<ul style="list-style-type: none"> <li>■ Sulfate</li> <li>■ Fluoride</li> <li>■ Calcium</li> <li>■ Boron</li> <li>■ Bromide</li> <li>■ Chloride</li> </ul>

Notes:

- 1) Fly ash and boiler slag/bottom ash typically have the same indicator parameters.
- 2) Definitions from USEPA website, available at <https://www.epa.gov/coalash/coal-ash-basics>.
- 3) Key indicators from EPRI 2011, 2012, and 2017.

## 4.2 Site Specific Key CCR Indicators

To be a key CCR Indicator parameter for a specific site, a constituent should be present in relatively high concentrations in the leachate (CCR porewater) when compared to background or other sources (nearby rivers, etc.), not be a common anthropogenic contaminant, and be mostly non-reactive and mobile in the site's hydrogeological environment (EPRI 2012). In 2012, EPRI investigated which constituents are the best indicator parameters for coal ash impacts as outlined in **Table 1**. Of the key indicators listed in **Table 1** for fly ash and boiler slag/bottom ash, boron, molybdenum, lithium, sulfate and fluoride are regularly sampled as part of the CCR Rule. Potassium and sodium are sampled periodically for major ion analysis and testing under the CCR Rule. Testing for bromide has not been completed at the site.

**Table 2** provides a snapshot of the concentrations present onsite in the background, Mississippi River, Missouri River, and SCPA porewater for each of the constituents sampled on the key indicator list.

**Table 2 – Summary of Potential CCR Impact Indicator Parameters at the Sioux Energy Center**

Constituent (Units)		Back-ground	Mississippi River <sup>2</sup>	Missouri River	SCPA Porewater	Advantages and Caveats as Key Indicator (from EPRI 2012)
Boron (µg/L)	Minimum	ND (<50)	27.1	110	348	Typically present in leachate, non-reactive and mobile in common hydrogeologic environments, and not a common anthropogenic contaminant.
	Average	93.99	36.4	112.3	53,266	
	Maximum	240	59.9	117	111,000	
Sulfate (mg/L)	Minimum	20.0	29.9	188	48.5	Commonly analyzed and very mobile in all hydrogeologic environments. Concentration in impoundment leachate may in some cases be too low relative to background to be useful. Less useful in strongly reducing environments where sulfate can be reduced to hydrogen-sulfide gas.
	Average	31.52	34.08	192.1	1,088	
	Maximum	61.1	40.5	196	2,080	
Molybdenum (µg/L)	Minimum	ND (<0.52)	ND<0.9	2.6	26.5	Most useful for dry-managed coal ash. May be less mobile than boron in some hydrogeologic environments. Concentrations may be too low in impoundment leachate to be useful if background groundwater has detectable concentrations.
	Average	1.798	1.406	2.97	22,085	
	Maximum	9.3	2.3	3.6	56,600	
Lithium (µg/L)	Minimum	ND (<2.9)	ND<2.9	42.0	16.7	Useful for coal ash management sites where the power plant burned bituminous coal. Leachate concentrations are typically low in coal ash derived from subbituminous and lignite coal
	Average	12.59	6.694	43.17	56.16	
	Maximum	25.4	10.4	44.9	170	
Potassium (µg/L)	Minimum	ND (<500)	Not Sampled	Not Sampled	4,350	Commonly analyzed, although may be less mobile than boron and sulfate. Assure that leachate concentration is higher than background and that there are no anthropogenic sources such as agricultural fields where potassium may be applied in fertilizers.
	Average	1,791			34,350	
	Maximum	3,840			60,300	
Sodium (mg/L)	Minimum	4.58	Not Sampled	Not Sampled	13.9	Useful for coal ash management sites where the power plant injects trona or sodium bicarbonate or burned subbituminous coal. Absent dry sorbent injection, leachate concentrations are considerably lower in coal ash derived from bituminous coal, particularly at impoundments. Assure that leachate concentration is higher than background and that there are no anthropogenic sources such as agricultural fields, or major highways in northern climates where sodium may be applied in road salts.
	Average	5.782			59.36	
	Maximum	7.39			116	
Fluoride (mg/L)	Minimum	ND (<0.086)	0.16	0.43	0.22	Mobile and non-reactive in common hydrogeologic environments. Assure that leachate concentration is higher than background.
	Average	0.2938	0.196	0.4435	1.142	
	Maximum	0.46	0.24	0.46	2.9	

Notes:

- 1) Unit abbreviations - mg/L – milligrams per liter, µg/L – micrograms per liter
- 2) ND - Constituent was analyzed but was not detected above the Method Detection Limit (MDL) or the adjusted Practical Quantitation Limit (PQL) based on data validation and is considered a non-detect. Values displayed as ND.

Based on the results of **Table 2**, boron appears to be the best indicator parameter for impacts from the SCPA because it has a much higher concentration in the CCR porewater than the background concentrations and it is

<sup>2</sup> Mississippi and Missouri River samples collected September 21 & 22, 2017 and May 8, 2018. Results are available on Ameren's public website at <https://www.ameren.com/company/environment-and-sustainability/managing-coal-combustion/CCR-compliance-reports/sioux-energy-center>.

non-reactive and highly mobile at the site. Sulfate and molybdenum also appear to be good indicators, however, the distinction between background and porewater for sulfate is not as distinct as that for boron, and molybdenum is typically not as mobile as boron (EPRI, 2012). Fluoride may be a good indicator as well, however, porewater concentrations are not significantly higher than background, and therefore it would be difficult to detect impacts using fluoride concentrations. Average lithium concentrations in the porewater are also not significantly elevated when compared to background groundwater samples or the Missouri River, therefore determining the source of impacts would be difficult. Potassium and sodium are also not ideal indicators as many of the wells onsite are either near major roadways (highway 94) or located within the many agricultural fields around the plant, which may display elevated concentrations caused from anthropogenic sources (road salt, fertilizers, etc.).

Therefore, boron appears to be the best indicator parameter for CCR impacts at the SEC. Molybdenum also appears to be a good indicator but may not be present at the furthest extents of the plume. Boron and molybdenum concentrations are above background concentrations at each of the six monitoring wells used for Detection and Assessment monitoring wells adjacent to the SCPA (WSP 2023).

#### *4.2.1 Lithium Concentrations*

As indicated in **Table 1**, lithium can be a key indicator for fly ash and boiler slag/bottom ash impacts if it is present at elevated levels in the CCR porewater compared to background and is mobile at the site. However, as discussed in Section 3.2, boron and molybdenum are better CCR impact indicator parameters than lithium for the SEC, as most porewater samples are not significantly higher than background concentrations. Four of the five CCR porewater samples collected in 2018 as a part of the SCPB ASD (available in the 2018 Annual Report for the SCPB, Golder 2019b) have lithium concentrations below that of those found naturally occurring in the Missouri River and the site-specific Groundwater Protection Standard (GWPS) for lithium (40 µg/L), and at levels only 2x to 3x above background monitoring wells located closer to the Mississippi River (BMW-1S/D and BMW-3S/D). Additionally, lithium concentrations are below Missouri River levels in each of the six perimeter wells adjacent to the SCPA used for Detection and Assessment Monitoring. This further establishes that lithium is not a useful CCR impact indicator parameter for the SCPA and the SEC area.

**Table 3 – May 2023 Analytical Results of Key Constituents at Monitoring Wells with a Statistical Lithium Exceedance**

Well ID	Lithium (µg/L)	Boron (µg/L)	Molybdenum (µg/L)
LMW-5S	45.3	16,200	1,630
TP-2D	45.3	87.8 J	3.1 J
TP-6S	34.6	101	4.2 J
BMW-1S (background)	5.8 J	64.8 J	5.3 J
BMW-3S (background)	9.9 J	67.1 J	4.7 J
BMW-1D (background)	14.3	132	6.9 J
BMW-3D (background)	22.8	63.5 J	1.7 J

Notes:

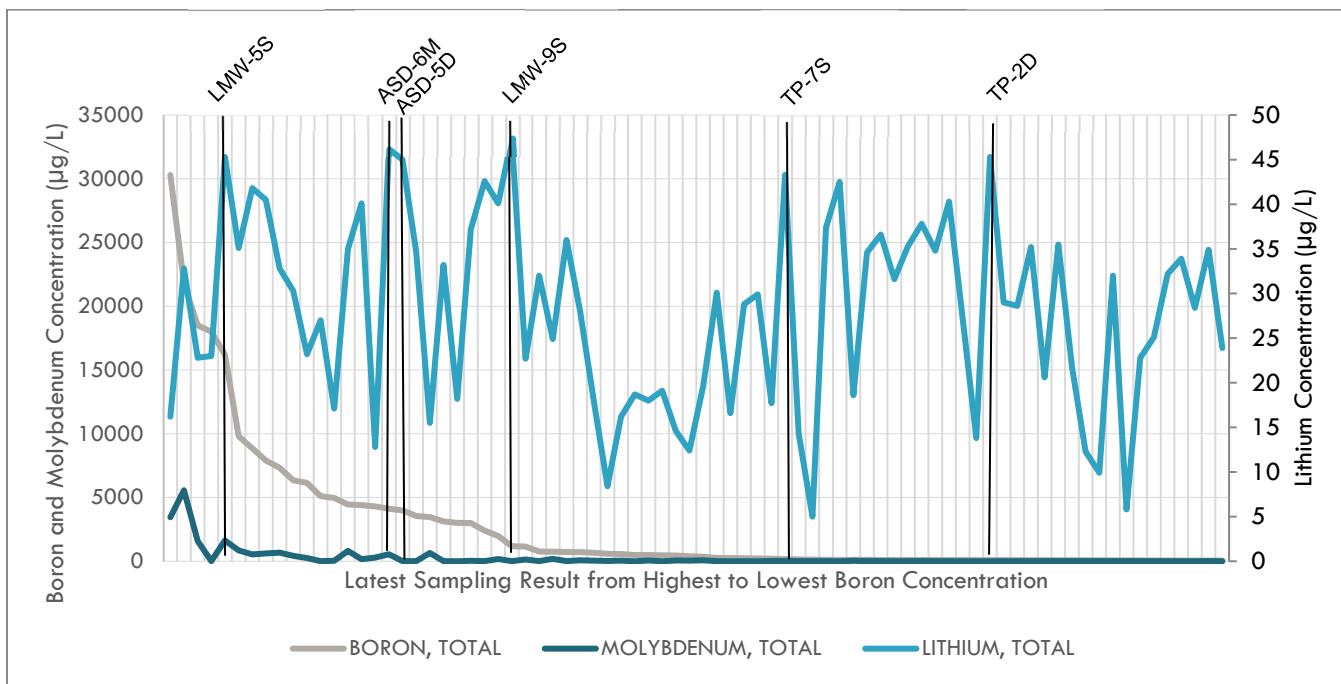

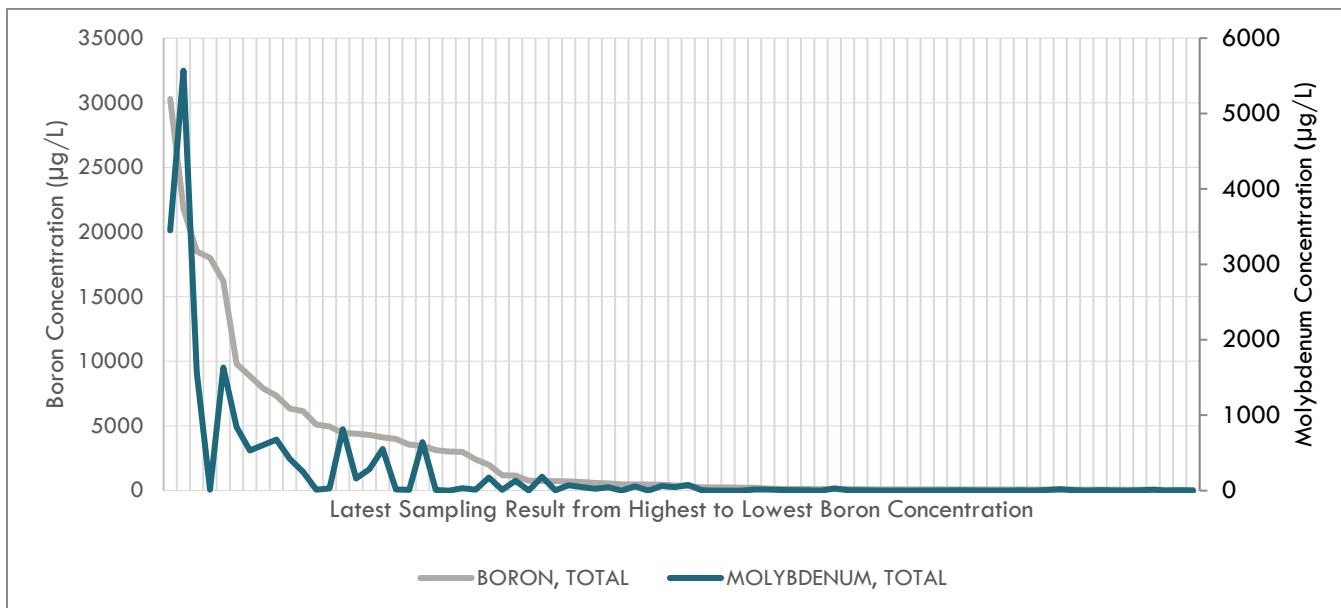

- 1) µg/L – micrograms per liter.
- 2) J - Result is an estimated value.

As displayed in **Table 3**, of the three wells with a statistical exceedance for lithium, only LMW-5S has boron and molybdenum concentrations at a level above background levels for these constituents. This lack of correlation between key CCR Indicator parameters and elevated lithium concentrations indicates that elevated lithium concentrations are not associated with CCR impacts that contain elevated boron and molybdenum.

To further evaluate the correlation between key CCR indicators and lithium concentrations onsite, a graph that displays boron, lithium and molybdenum concentrations from the most recent sampling result at each monitoring well is provided in **Figure 2** (data used for **Figure 2** provided in **Table 4**). As displayed on the first graph,

molybdenum concentrations appear to correlate with boron concentrations, with elevated levels at similar monitoring wells. Lithium concentrations do not track with either boron or molybdenum concentrations, but rather range between 5 – 50 µg/L, indicating that lithium concentrations are not linked to impacts from the SCPA.

**Figure 2 – Comparison of Boron, Molybdenum, and Lithium Concentrations**

**Notes:**

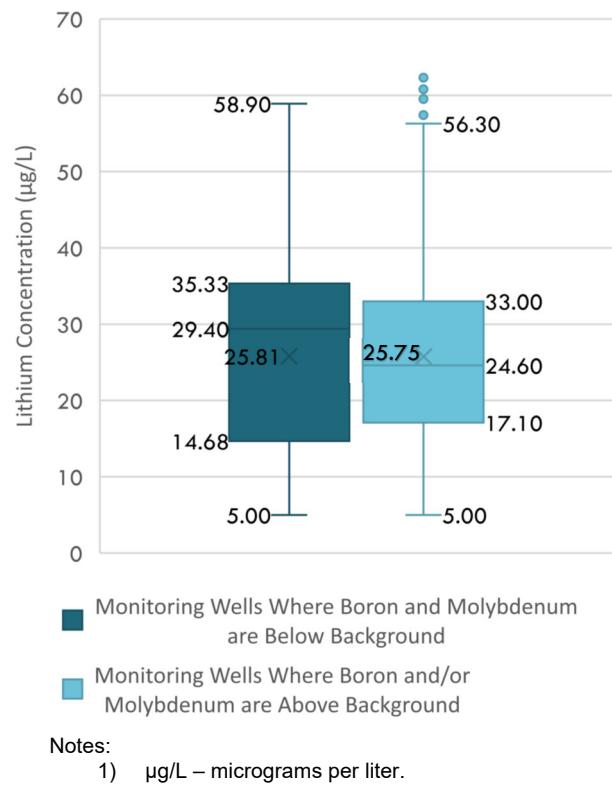

- 1) µg/L – micrograms per liter.
- 2) Values displayed in order from highest to lowest boron concentrations. Data used in Figure 2 are provided in Table 4.
- 3) The upper graph displays boron and molybdenum concentrations, with molybdenum concentrations on the right axis.
- 4) The lower graph displays boron, molybdenum, and lithium concentrations, with lithium concentrations on the right axis.

As displayed in **Table 4**, there are 35 monitoring wells onsite where boron and/or molybdenum concentrations are below background limits and 43 monitoring wells onsite where boron and/or molybdenum are above background limits.

Background limits are based on the most recent updated statistical limits for the SCPA (Rocksmith, 2023). **Figure 3** displays the distribution of lithium concentrations for the following datasets: 1) monitoring wells where there is a corresponding molybdenum and/or boron exceedance (43 monitoring wells) and 2) monitoring wells where there is not a corresponding boron or molybdenum exceedance (35 monitoring wells). For this figure, historical datasets for each monitoring well were used to generate the distributions. The results of this box and whisker plot display a nearly identical distribution between the two datasets including minimum, lower quartile, median, upper quartile, and maximum values all within 5 µg/L of one another. This further demonstrates that lithium concentrations do not correlate with key CCR indicator parameters, and therefore, elevated lithium concentrations onsite are not related to CCR impacts.

Using the data identified in **Figure 3**, for those wells without a boron or molybdenum exceedance above background, a non-parametric (highest value in the dataset) upper prediction limit of 58.9 µg/L was calculated, which is higher than the current Site GWPS of 40 µg/L.

**Figure 3 – Distribution of Lithium Concentrations in Monitoring Wells With and Without Key CCR Indicators**

#### 4.2.2 Sequential Extraction Data

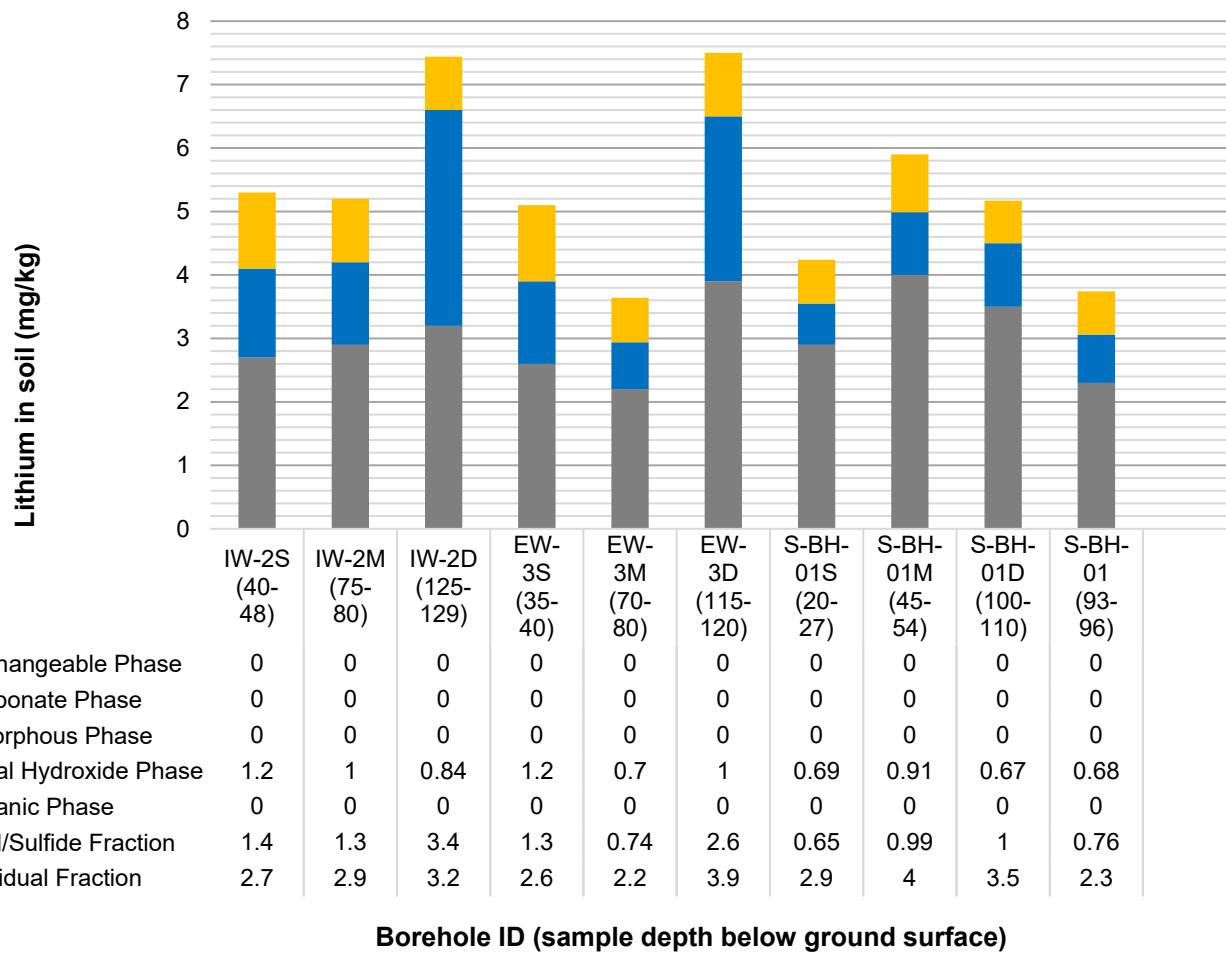

##### Confirms Presence of Naturally Occurring Lithium in Alluvial Sediments

A seven-step sequential extraction method (SEP) based on Tessier et al. (1979) was used to identify the provenance of lithium in soils (i.e., the operationally defined fraction that contains the metal) and determine potential environmental mobility. The total concentration of a metal measured from all seven steps can be compared to the concentration determined from the total metal analysis for compositional accountability. The seven-step SEP is defined by specific extraction steps as follows (based on a modified Tessier et al. 1979 method):

**Figure 4 – Sequential Extraction Procedure**

SEQUENTIAL EXTRACTION PROCEDURE		
ENVIRONMENTALLY AVAILABLE 	Step 1	Exchangeable Fraction: This extraction includes trace elements that are electrostatically adsorbed to overburden minerals
	Step 2	Carbonate Fraction: This extraction targets trace elements that are adsorbed or otherwise bound to carbonate minerals
	Step 3	Non-Crystalline Materials Fraction: This extraction targets trace elements that are complexed by amorphous minerals
	Step 4	Metal Hydroxide Fraction: This extraction targets trace elements bound to hydroxides of iron, manganese, and/or aluminum
	Step 5	Organic Fraction: This extraction targets trace elements strongly bound via chemisorption to organic material
	Step 6	Acid/Sulfide Fraction: The extraction is used to identify trace elements precipitated as sulfide minerals
	Step 7	Residual Fraction: Trace elements remaining in the overburden after the previous extractions will be distributed between silicates, phosphates, and refractory oxide

In 2021, samples were collected by Golder from three soil borings across the SEC for sequential extraction testing. The locations of the sequential extraction sample borings are provided in **Figure 1**. Results of the sequential extraction testing as displayed in **Figure 5** indicate the presence of naturally occurring lithium in soils at the SEC in fractions 6 and 7 in each of the soil borings, regardless of if the locations were directly adjacent to the SCPA or at background locations. Lithium is reported in soils at concentrations ranging from 3.6 to 7.4 milligrams per kilogram (mg/kg, from the SEP) and is predominantly (76 to 87%) present in the residual and sulfide component of the soil, i.e. the non-environmentally available fractions. The absence of lithium in the environmentally available fractions (specifically exchangeable and carbonate fractions) indicate a general lack of lithium transport and attenuation (e.g., through sorption and/or co-precipitation).

**Figure 5 - Sequential Extraction of Lithium Results****Notes:**

- 1) Detection with JB flags for the organic phase were not used for this evacuation, as these results were detected in the blank, are estimated, and are therefore not considered accurate for this evaluation.
- 2) Mg/kg – milligrams per kilogram.
- 3) Sample locations provided in **Figure 1**. BH-01 is near the background wells while IW-2 and EW-3 are located adjacent to the SCPA CCR Unit.

#### ***4.2.3 Leachability Testing***

In a previous study completed by Haley & Aldrich in 2018, several leachability tests were completed at the site for the CCR materials in the SCPA and the SCPB. First, the Shake Extraction Test (method ASTM D3987) was completed. This test consists of shaking the waste (CCR) with water to determine what constituents would be leached from the material. For this test, both the SCPA bottom ash and the SCPB fly ash had a result of non-detect for lithium (<0.018 mg/L). Secondly, a Synthetic Precipitation Leaching Procedure (SPLP) test was completed for both the SCPA bottom ash and the SCPB fly ash. This method is used to determine if constituents of concern are able to leach into groundwater from the waste (CCR). For this test, the bottom ash/boiler slag in SCPA was again at a non-detect level for lithium, while the fly ash in SCPB had a lithium concentration of 0.0087 mg/L. The lithium, concentration of 0.0087 mg/L (8.7 µg/L) is at a similar level as background groundwater, and well below the site GWPS of 40 µg/L. This indicates that there is little leachable lithium present in the SCPA or SCPB CCR units.

#### **4.2.4 Lithium at TP-6S**

TP-6S is located approximately 2,500 feet southwest of the SCPA and approximately 2,500 feet south of background wells BMW-1S and BMW-1D. Located on the western side of the property, TP-6S is considered upgradient or cross-gradient of the SCPA, as groundwater flow at the site ranges from north to south, with a net groundwater flow toward the east. During the statistical evaluation of the May 2023 sampling event, a lower confidence limit (LCL) of 33.42 µg/L and upper confidence limit (UCL) of 40.1 µg/L were calculated for lithium. When compared to the UPL of 58.9 µg/L for lithium as discussed above, the UCL is below the calculated prediction limit for wells with no boron or molybdenum exceedances. This, coupled with the clear indications that lithium concentrations are not correlated with CCR impacts, indicates that the elevated lithium at TP-6S is not from the SCPA, but rather is naturally occurring in the alluvial aquifer at this location.

#### **4.2.5 Lithium at TP-2D**

TP-2D is located approximately 3,000 feet to the northeast of the SCPA on the southern bank of the Mississippi River. Like TP-6S, boron and molybdenum concentrations at this monitoring well are below background, indicating that CCR impacts are unlikely at this monitoring well. During the statistical evaluation of the May 2023 sampling event, a LCL of 40.24 µg/L and UCL of 53.27 µg/L were calculated. When compared to the UPL of 58.9 µg/L as discussed above, the UCL is below the calculated prediction limit for wells with no boron or molybdenum exceedances. This, coupled with the clear indications that lithium concentrations are not correlated with CCR impacts indicates that the elevated lithium at TP-2D is not from the SCPA, but rather is naturally occurring in the alluvial aquifer at this location.

#### **4.2.6 Lithium at LMW-5S**

LMW-5S is located approximately 2,000 feet to the southeast of the SCPA, near the southeastern perimeter of the SCPB. Unlike TP-2D and TP-6S, boron concentrations are elevated at LMW-5S while molybdenum concentrations are typically below background. During the statistical evaluation of the May 2023 sampling event, a LCL of 42.19 µg/L and UCL of 48.71 µg/L were calculated. When compared to the UPL of 58.9 µg/L as discussed above, the UCL is below the calculated prediction limit for wells with no boron or molybdenum exceedances. This, coupled with the clear indications that lithium concentrations are not correlated with CCR impacts indicates that the elevated lithium at LMW-5S is not from the SCPA, but rather is naturally occurring in the alluvial aquifer at this location.

#### **4.2.7 Naturally Occurring Lithium Values at the SEC are Consistent with Upstream Sampling Results within the Missouri and Mississippi River Alluvial Aquifers**

Naturally occurring lithium is present in groundwater across the United States (US), can be found in nearly all rock and soil types, and is most commonly found to be associated with silicate minerals (Tomazscak 2015). The weathering of silicate minerals is known to cause the release of naturally occurring lithium into groundwater (Tomazscak 2015). Site-specific test results (i.e., SEP results) confirm this finding for the SEC.

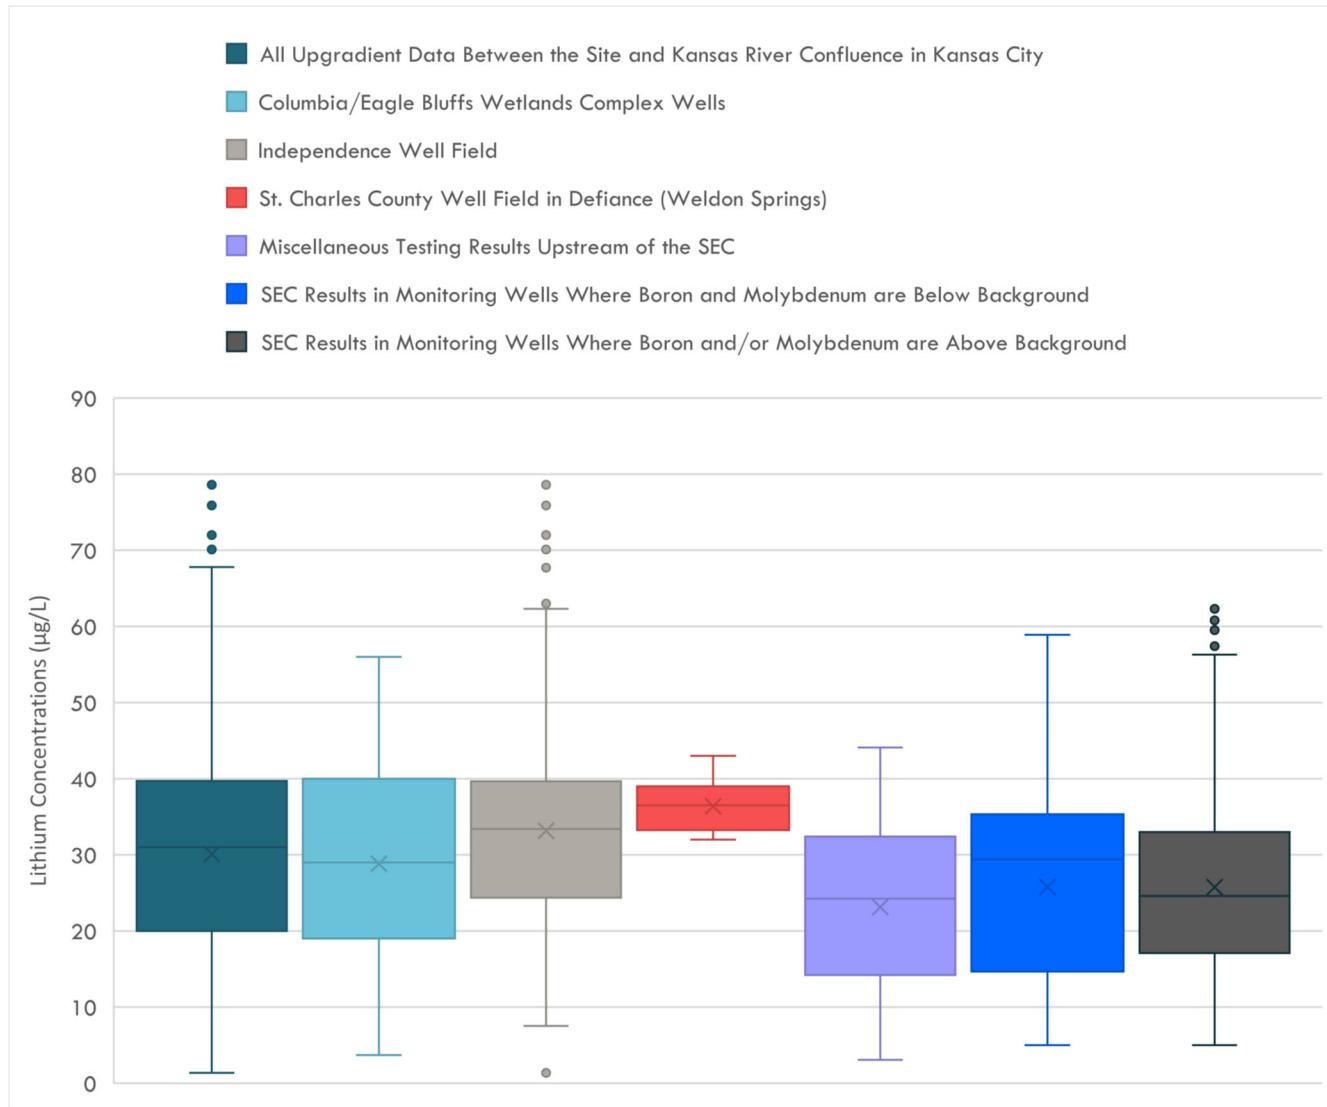

The National Water Quality Monitoring Council's (NWQMC) Water Quality Portal (available at <https://www.waterqualitydata.us/>) summarizes data from the USGS, the USEPA, and the NWQMC databases. A review of lithium results from within the Missouri and Mississippi River Alluvial Aquifer from the NWQMC database includes lithium results from a total of 1,347 groundwater sample results for wells located upgradient of the SEC within the Missouri River alluvial aquifer and 1 groundwater sample result for wells located upgradient of the SEC within the Mississippi River alluvial aquifer in the state of Missouri. To evaluate naturally occurring Missouri River Alluvial Aquifer concentrations of lithium, the database results were divided different groups as follows:

- Independence Well Field near Independence Missouri (Kelly 2010) – Total of 410 results.
- Columbia/Eagle Bluffs Wetland Complex Wells (Richards 1995, Richards 1999, Richards, 2002) – Total of 851 results.
- Weldon Spring Well Field (Kleeschulte, 1993) – Total of 32 results.
- Miscellaneous testing results upstream of the SEC – Total of 54 results

- Only 1 result available within the Mississippi River alluvium upgradient of the SEC which is a result of 14.7 µg/L near Wayland Missouri.

**Figure 6** displays a box and whisker plot that compares the publicly available groundwater lithium concentration data in the upgradient alluvial aquifers to lithium concentrations at SEC as displayed in **Figure 4**.

#### Figure 6 – Comparison of Missouri River Alluvial Aquifer Groundwater Lithium Concentrations – Public Data and SEC Results

Note:

- 1) µg/L – micrograms per liter.

Overall, the results display a very similar distribution of lithium results across the state within the Missouri River Alluvium. In fact, lithium concentrations appear to be lower, on average than those in Independence, Columbia/Eagle Bluffs, and Weldon Spring. This consistency with upgradient alluvial aquifer samples demonstrates that the lithium concentrations onsite are not from the SCPA, but rather are naturally occurring within the alluvial aquifer.

## 4.3 Cobalt Evaluation

Cobalt is present at a level that is statistically above the GWPS of 6 µg/L using corrective action statistical evaluations at LMW-6S. LMW-6S is located approximately 1,800 feet southeast of the SCPA, on the eastern perimeter of the SCPB, approximately 750 feet northeast of LMW-5S discussed above. As displayed in **Table 5**, boron is present at LMW-6S at a concentration above background, while molybdenum is detected below the Practical Quantitation Limit (PQL), similar to molybdenum concentrations at background wells.

**Table 5 – May 2023 Analytical Results of Key Constituents at Monitoring Wells with a Statistical Cobalt Exceedance**

Well ID	Cobalt (µg/L)	Boron (µg/L)	Molybdenum (µg/L)
LMW-6S	6.8	18,000	12.1 J
BMW-1S (background)	ND (<1.2)	64.8 J	5.3 J
BMW-3S (background)	ND (<1.2)	67.1 J	4.7 J
BMW-1D (background)	ND (<1.2)	132	6.9 J
BMW-3D (background)	ND (<1.2)	63.5 J	1.7 J

Notes:

- 1) µg/L – micrograms per liter.
- 2) J - Result is an estimated value.

As displayed on **Table 1**, cobalt is not typically considered a key CCR indicator parameter because it is usually present at a low concentration in CCR leachate relative to typical background, has low mobility, and has a higher potential for reactivity (EPRI 2017). Based on the results of the initial Corrective Action Statistical Evaluation completed in May 2023, Cobalt was present a level statistically above the GWPS with a LCL of 6.873 µg/L and a UCL of 10.03 µg/L. Since its installation in 2016, cobalt concentrations have ranged from 5.9 to 10.7 µg/L.

**Table 6** provides a summary of cobalt minimum, average, and maximum concentrations in the different potential source areas including background, porewater, Missouri River, and Mississippi River. As displayed on **Table 6**, concentrations in LMW-6S are above those present in background, nearby rivers, and porewater.

**Table 6 – Summary of Cobalt Concentrations**

Constituent (Units)		LMW-6S	Background	Assessment Monitoring Wells Adjacent to SCPA (UMW 1D-6D)	Mississippi River <sup>3</sup>	Missouri River	SCPA Porewater	SCPB Porewater
Cobalt (µg/L)	Minimum	5.9	ND (<0.72)	ND (<0.72)	ND (<0.73)	ND (<0.73)	ND (<0.73)	ND (<0.73)
	Average	7.759	0.8064	0.4726	1.217	0.5065	0.652	ND (<0.73)
	Maximum	10.7	4.2 J	1.7 J	2.3 J	0.87 J	1.8	ND (<0.73)

Notes:

- 1) µg/L – micrograms per liter.
- 2) J - Result is an estimated value.

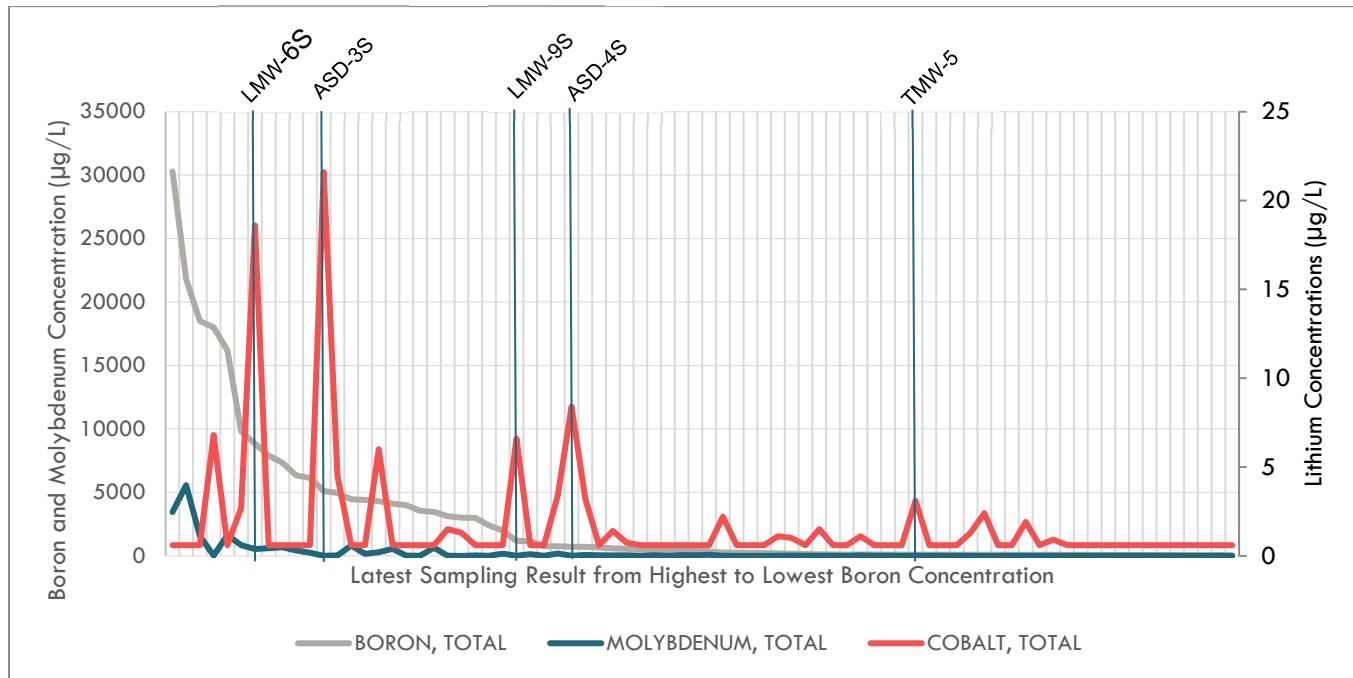

<sup>3</sup> Mississippi and Missouri River samples collected September 21 & 22, 2017 and May 8, 2018. Results are available on Ameren's public website at <https://www.ameren.com/company/environment-and-sustainability/managing-coal-combustion/CCR-compliance-reports/sioux-energy-center>.

In January 2018, as part of the initial SCPB ASD, porewater was sampled in the SCPA and SCPB CCR units. Eight (8) of the nine (9) results from this analysis were non-detect ( $<0.73 \mu\text{g/L}$ ) and one result at SCPA-2 was  $1.8 \mu\text{g/L}$ . This lack of cobalt in the CCR materials has been confirmed in other studies as well, including the current NPDES permit (#MO-0000353) where cobalt is not listed as a Pollutant of Concern (POC) since the results collected from the SCPA and SCPB outfalls were at a non-detect level. Lack of cobalt within the pore-water of the SCPA and SCPB, coupled with the lack of cobalt at a statistically significant level above the GWPS in any other monitoring well onsite, indicates that cobalt is likely not from the SCPA, but rather, an alternative source.

Further evidence that the SCPA is not a source of elevated cobalt concentrations is the lack of cobalt in the groundwater monitoring wells directly adjacent to the CCR Unit used for Detection and Assessment Monitoring. These wells (UMW-1D, UMW-2D, UMW-3D, UMW-4D, UMW-5D and UMW-6D, as displayed in **Figure 1**) show elevated key CCR indicator parameter concentrations for boron and molybdenum but do not have elevated cobalt concentrations. Of the 108 testing results for these six (6) monitoring wells, only one result has a value over the method detection limit (MDL) at  $1.7 \mu\text{g/L}$  (below the PQL). Therefore, 99.1% of all cobalt results in monitoring wells located directly adjacent to the SCPA are present at a non-detect level.

Like lithium, concentrations of cobalt do not closely track with key indicator parameters of boron or molybdenum. **Figure 7** is a graph that displays boron, cobalt and molybdenum concentrations from the most recent sampling result at each monitoring well (data used to generate this graph is available in **Table 4**). As displayed previously in **Figure 2** and below in **Figure 7**, molybdenum concentrations appear to correlate with boron concentrations, with elevated levels at similar monitoring wells. Cobalt concentrations do not track closely with either boron or molybdenum concentrations, but rather range from non-detect ( $<0.73 \mu\text{g/L}$ ) to ( $20 \mu\text{g/L}$ ).

**Figure 7 – Comparison of Boron, Molybdenum, and Cobalt Concentrations**

#### Notes:

- 1)  $\mu\text{g/L}$  – micrograms per liter,
- 2) Values displayed in order from highest to lowest boron concentrations. Data used in Figure 7 are provided in Table 4.
- 3) Cobalt concentrations displayed on secondary axis, with values on the right side of the graph.

As displayed in **Table 4**, there are 35 monitoring wells onsite where boron and molybdenum concentrations are below background and 43 monitoring wells onsite where boron or molybdenum are above background

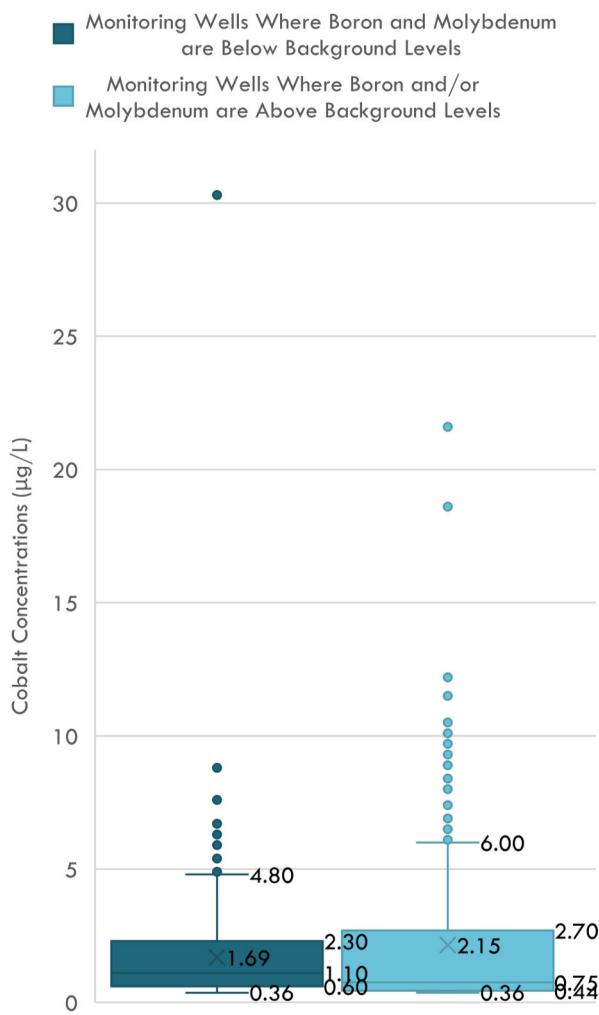

concentrations. **Figure 8** displays the distribution of cobalt concentrations between these two datasets (with and without boron or molybdenum exceedances). For this figure, historical data for each of the wells identified above were used to generate the distribution. The results of this box and whisker plot display a very similar distribution between the two datasets including mean concentrations within 0.5 µg/L and median concentrations within 0.4 µg/L. This further demonstrates that cobalt concentrations do not correlate with key CCR indicator parameters, and therefore, elevated cobalt concentrations onsite are naturally occurring and not related to CCR impacts.

#### *4.3.1 Sequential Extraction Data Confirms Presence of Naturally Occurring Cobalt in Sediments*

As with lithium, a seven-step sequential extraction method (SEP) based on Tessier et al. (1979) was used to identify the provenance of cobalt in soils (i.e. the operationally-defined fraction that contains the metal) and determine potential environmental mobility. The total concentration of a metal measured from all seven steps can be compared to the concentration determined from the total metal analysis for compositional accountability. The locations of the sequential extraction sample locations are provided in **Figure 1**.

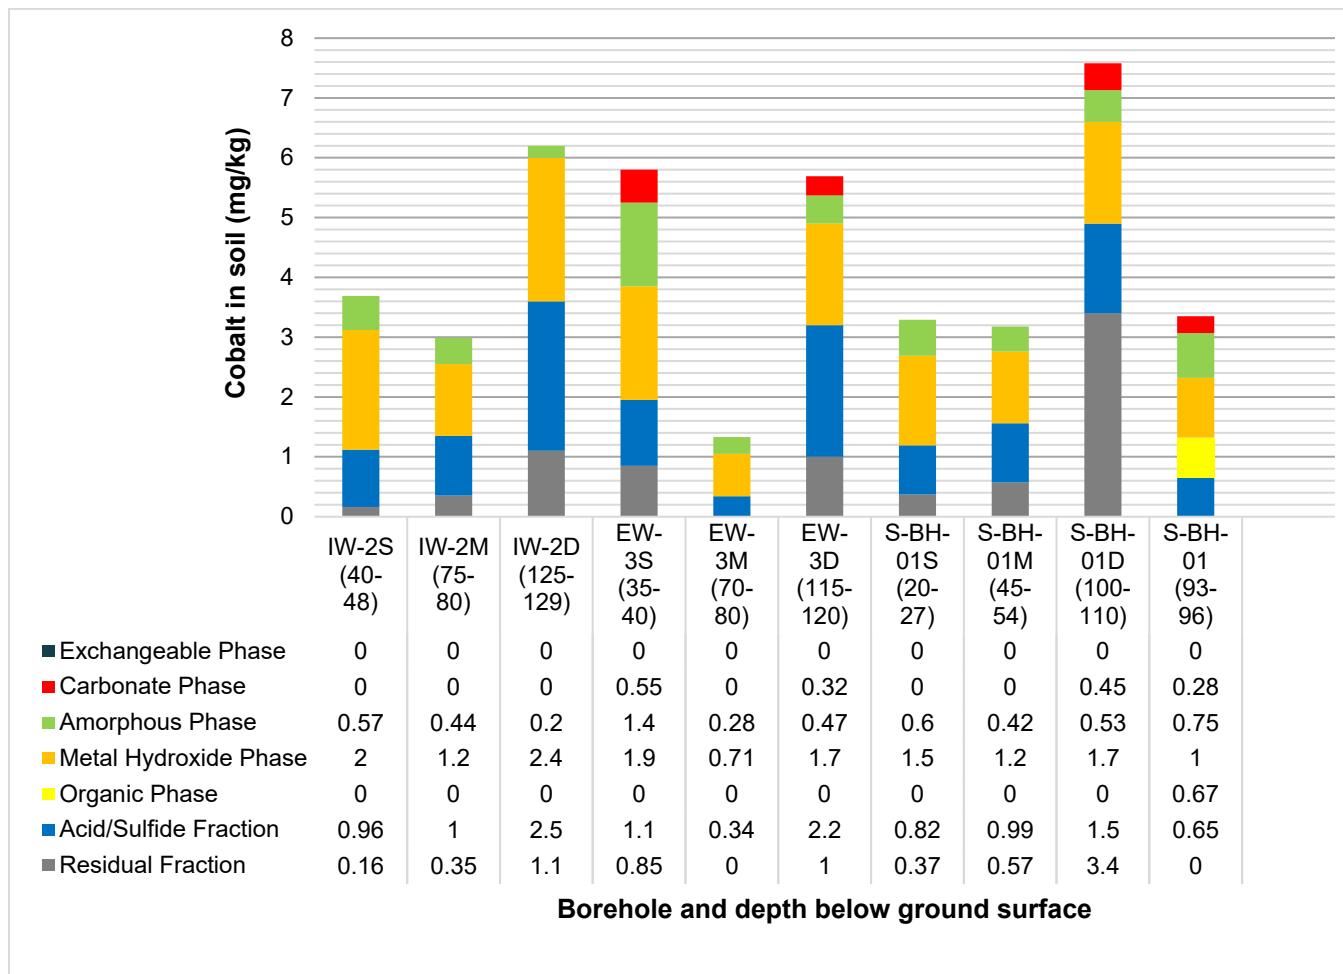

Results of the sequential extraction testing indicate naturally occurring cobalt is present in soils at the SEC in fractions 6 and 7 of each of the soil borings, regardless of if the location is directly adjacent to the SCPA or at background locations. Cobalt is reported at concentrations ranging from 1.3 to 7.6 milligrams per kilogram (mg/kg, from the SEP) and is present in the residual and sulfide component of the soil (35 to 81%), i.e., the non-environmentally available fractions. Background soil samples, outside of the impacts from the SCPA, display similar results as those soil samples collected adjacent to the CCR unit, indicating that cobalt is not from impacts from the CCR Unit, but rather is naturally occurring in the alluvial aquifer.

**Figure 8 – Distribution of Cobalt Concentrations in Monitoring Wells With and Without Key CCR Indicators**

Notes:

2) µg/L – micrograms per liter.

**Figure 9 - Sequential Extraction of Cobalt Results**

Notes:

1) Mg/kg – milligrams per kilogram.

2) Sample locations provided in **Figure 1**. BH-01 is near the background wells while IW-2 and EW-3 are located adjacent to the SCPA CCR Unit.

### 4.3.2 Leachability Testing

As with lithium, several leachability tests were completed at the site by Haley & Aldrich in 2018 for the CCR materials in the SCPA and the SCPB. For the Shake Extraction Test (method ASTM D3987), both the SCPA bottom ash and the SCPB fly ash results were non-detect ( $<0.0068$  mg/L) for cobalt. For the SPLP test, both the SCPA bottom ash and the SCPB fly ash were non-detect ( $<0.0027$  mg/L) for cobalt. This confirms the results of the porewater testing and indicate that little to no leachable cobalt is present in the SCPA or SCPB CCR units and they are not significant sources of cobalt in the alluvial aquifer groundwater.

### 4.3.3 Naturally Occurring Cobalt Values at the SEC are Consistent with Upstream Sampling Results within the Missouri and Mississippi River Alluvial Aquifers

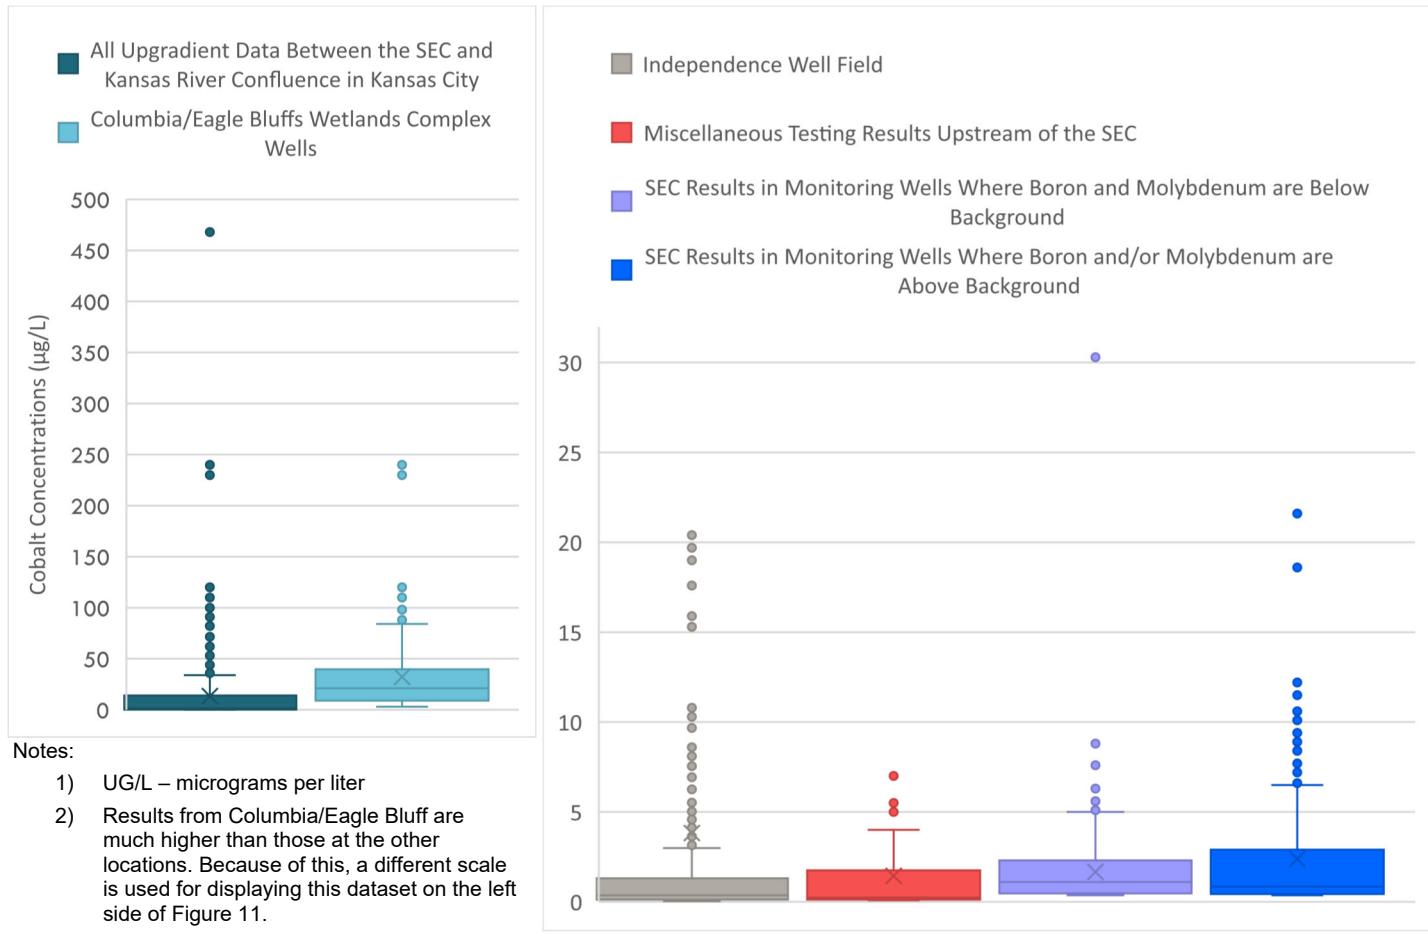

Cobalt may be present in mineral form as arsenides, carbonates, sulfides and oxides (Hem, 1989; Smith and Carson, 1981). During weathering of these minerals (i.e., dissolution and/or oxidation), any cobalt is typically released and redistributed to iron or manganese (hydr)oxides (Butt et al., 2000) or other sorbent (e.g., clays, organic matter). The National Water Quality Monitoring Council's (NWQMC) Water Quality Portal (available at <https://www.waterqualitydata.us/>) summarizes data from the USGS, the USEPA, and the NWQMC databases. A

review of Cobalt results from within the Missouri and Mississippi River Alluvial Aquifer from the NWQMC database includes Cobalt results from a total of 515 groundwater sample results for wells located upgradient of the SEC within the Missouri River alluvial aquifer and 1 groundwater sample result for wells located upgradient of the SEC within the Mississippi River alluvial aquifer in the state of Missouri. To evaluate naturally occurring Missouri River Alluvial Aquifer concentrations of cobalt, the database results were divided different groups as follows:

- Independence Well Field near Independence Missouri (Kelly 2010) – Total of 306 results.
- Columbia/Eagle Bluffs Wetland Complex Wells (Richards 1995, Richards 1999, Richards, 2002) – Total of 176 results.
- Miscellaneous testing results upstream of the SEC – Total of 33 results.
- Only 1 result available within the Mississippi River alluvium upgradient of the SEC which is a result of 0.079 µg/L near Wayland Missouri.

**Figure 10** displays a box and whisker plot that compares the publicly available groundwater cobalt data in the upgradient alluvial aquifers to those completed onsite as displayed in **Figure 9**.

#### Figure 10 – Comparison of Missouri River Alluvial Aquifer Groundwater Cobalt Concentrations – Public Data and Sioux Results

The cobalt concentrations from the Columbia/Eagle Bluffs Welands complex are much higher than those at the SEC and those further upgradient at the Independence Well Field. It is unknown why these results are at such elevated concentrations, therefore, they are not used for this evaluation. Excluding the data from Columbia/Eagle

Bluffs Welands complex, the results display that the majority of cobalt concentrations across the Missouri River alluvial aquifer are below 4 µg/L with some outliers above 6 µg/L at each site. This is likely caused by the heterogeneous nature of the Missouri River Basin alluvial aquifer deposits, which are derived from a vast area of the United States including parts of Missouri, Iowa, Kansas, Nebraska, South Dakota, North Dakota, Montana, Wyoming, and Colorado. The sediments in the Missouri River Alluvial Aquifer at the site are made up of a mixture of sediments from all reaches of the Missouri River Basin. Cobalt deposits and many metamorphic and igneous rocks containing cobalt occur at numerous locations within the Missouri River Basin. Therefore, the alluvial aquifer sediments in the vicinity of LMW-6S (as well as other various locations within the Missouri River Alluvium) likely include localized zones of increased cobalt concentrations, and are likely the cause of the elevated concentrations observed at the SEC.

This inconsistency of upgradient alluvial aquifer samples and their origins indicates that the cobalt concentrations onsite, namely the exceedance at LMW-6S, are not influenced by the SCPA, but rather are naturally occurring within the aquifer groundwater.

## 5.0 SUMMARY

---

Based on the information presented in **Section 4.0**, the statistical exceedances for lithium and cobalt at the site using Corrective Action statistical methods are not the result of impacts from the SCPA, but instead are the result of natural geochemical variability of groundwater within the alluvial aquifer at the site. The natural geochemical source for lithium and cobalt exceedances is supported by several factors including: (1) a lack of correlation between key CCR indicators (boron and molybdenum) and exceedances of lithium and cobalt, (2) the presence of lithium and cobalt at similar levels in upgradient alluvial aquifer samples , (3) the presence of naturally occurring cobalt and lithium in sediments upgradient of the SCPA, and (4) cobalt and lithium have been shown to be naturally occurring elements in soils and alluvial aquifer sediments that are derived from geologic sources within the Missouri River watershed.

# Figures

**TITLE**  
**SIOUX ENERGY CENTER GROUNDWATER MONITORING PROGRAMS AND SAMPLE LOCATION MAP**

**Legend**

	Sioux Energy Center Property Boundary
	CCR Units
	SCPA - Bottom Ash Surface Impoundment (Closed)
	SCPB - Fly Ash Surface Impoundment (Closed)
	Utility Waste Landfill Cells
	SCL4A - Dry CCR Disposal Area
	SCPC- Inactive FGD Surface Impoundment
	SCPD - FGD Surface Impoundment
	Monitoring Well Networks
	Corrective Action Monitoring Well
	SCPA Detection and Assessment Monitoring Well
	SCPB and Corrective Action Monitoring Well
	SCPB Detection Monitoring Well
	SCPC Detection Monitoring Well
	SCPD and SCPC Detection Monitoring Well
	SCPD Detection Monitoring Well
	SCL4A and Corrective Action Monitoring Well
	SCL4A Detection Monitoring Well
	Monitoring Well Used for Water Level Elevation Measurements Only
	Soil Boring Location for Sequential Extraction Samples

**NOTES**

1. All boundaries and locations are approximate.
2. FGD - Flue Gas Desulfurization.
3. CCR - Coal Combustion Residuals.

**REFERENCES**

## Appendix G 2023 Potentiometric Surface Maps

**LEGEND**

- Sioux Energy Center Property Boundary**
- CCR Units**
  - SCPA - Bottom Ash Surface Impoundment (Closed)**
  - SCPB - Fly Ash Surface Impoundment (Closed)**
  - SCPC - WFGD Surface Impoundment (Closure in Progress)**
  - SCL4A - Dry CCR Disposal Area**
  - SCPD - FGD Surface Impoundment**

**Groundwater Elevation Contour (FT MSL)**

- Groundwater Elevation Contour (FT MSL)**
- Inferred Groundwater Elevation Contour (FT MSL)**
- Ground/Surface Water Measurement Locations**
  - River Gauge Location**
  - Monitoring Well or Piezometer**
  - Groundwater Flow Direction**

**NOTES**

- ALL LOCATIONS AND BOUNDARIES ARE APPROXIMATE.
- GROUNDWATER AND SURFACE WATER ELEVATIONS DISPLAYED IN FEET ABOVE MEAN SEA LEVEL (FT MSL).
- GROUNDWATER ELEVATION MEASUREMENTS OBTAINED BY ROCKSMITH.
- MISSOURI RIVER ELEVATION ESTIMATED BASED ON NEARBY UNITED STATES GEOLOGICAL SURVEY (USGS) RIVER GAUGING LOCATIONS.
- MISSISSIPPI RIVER ELEVATION PROVIDED BY AMEREN MISSOURI.
- FGR - FLUE GAS DESULFURIZATION.
- TP-1S NOT USED FOR POTENSIOMETRIC SURFACE CONTOURING.
