

Public Postings of Transmission Function Information

[18 C.F.R. Section 358.7(a)]

Date of Disclosure	Information Disclosed
10/19/2017	<p>On October 19, 2017 a manager within Ameren Missouri Energy Marketing and Trading with responsibilities for managing Marketing Function personnel as defined by 18 CFR §358.3(d) was inadvertently provided access to non-public Transmission Function Information for approximately 10 – 20 seconds as a result of an Information Technology application control error. The employee, Sr. Manager, Real Time Operations, is in an organization with Marketing Function personnel and as part of the FERC Standards of Conduct program all personnel in this department are walled off from certain IT systems where non-public Transmission Function Information may be stored. On investigation it was determined that due to a recent IT system update, an application inadvertently removed certain restrictions associated with the employee's credentials. The IT control error has been corrected.</p> <p>Ameren is posting this notice in lieu of the information itself because the information is critical energy infrastructure information (CEII).</p>
