

POWERING GROWTH IN MISSOURI TO BOLSTER COMMUNITIES

We're driving regional growth by attracting new jobs and investment and positioning our communities as vibrant places to live and do business. Our priority is delivering reliable energy to all customers – a critical factor in helping businesses and communities thrive across Missouri. The **Powering Missouri Growth Plan**, currently under review by the Missouri Public Service Commission, is designed to support large new enterprises, including American data centers, while ensuring rates remain just and reasonable for all customers.

Goals of the Powering Missouri Growth Plan

- **Job Creation** – Drive meaningful employment growth – including full-time roles, construction jobs and skilled trades – by making Missouri more attractive for businesses to expand or relocate.
- **Community Betterment** – Generate new revenue streams for essential local services such as schools, fire protection and other public infrastructure.
- **Fair Cost Allocation** – Reasonably ensure large electric load customers pay their fair share of service costs, protecting other customers from unjust or unreasonable charges, in alignment with Missouri Senate Bill 4.

Providing Reliable Power for Economic Growth

Ameren Missouri has a robust generation strategy that can support Missouri economic development. Ameren Missouri is ready to support economic development with updated plans that can meet up to 2 gigawatts of new energy demand by 2032, offering a balanced, reliable and cleaner generation mix for all customers.
