## 1.0 INTRODUCTION

This annual report was developed to meet the requirements of United States Environmental Protection Agency (USEPA) 40 CFR Part 257 “Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals From Electric Utilities; Final Rule” (the CCR Rule). The CCR Rule requires owners or operators of existing CCR units to produce an Annual Groundwater Monitoring and Corrective Action Report (Annual Report) each year (§§ 257.90(e)). Ameren Missouri (Ameren) has determined that the SCPB Coal Combustion Residuals (CCR) Surface Impoundment at the Sioux Energy Center (SEC) is subject to the requirements of the CCR Rule. This Annual Report for the SCPB describes CCR Rule groundwater monitoring activities from January 1, 2019 through December 31, 2019.

## 2.0 INSTALLATION OR DECOMMISSIONING OF MONITORING WELLS

In accordance with the CCR Rule, a groundwater monitoring system has been installed to monitor the SCPB. The groundwater monitoring system consists of 11 groundwater monitoring wells screened in the uppermost aquifer and is displayed in **Figure 1**. No new monitoring wells were installed or decommissioned in 2019 as a part of the CCR Rule monitoring program for the SCPB. For more information on the groundwater monitoring network, details are provided in the 2017 Annual Groundwater Monitoring Report for the SCPB.

## 3.0 GROUNDWATER SAMPLING RESULTS AND DISCUSSION

The following sections review the sampling events completed for the SCPB CCR Unit in 2019. **Table 1** below provides a summary of the groundwater samples collected in 2019 including the number of samples, the date of sample collection, and the monitoring program.

**Table 1 – Summary of Groundwater Sampling Dates**

Sampling Event	Groundwater Monitoring Wells											Monitoring Program
	BMW-1S	BMW-3S	LMW-1S	LMW-2S	LMW-3S	LMW-4S	LMW-5S	LMW-6S	LMW-7S	LMW-8S	LMW-9S	
Date of Sample Collection												
January 2019 Verification Sampling	-	-	-	1/7/2019	1/7/2019	1/7/2019	-	-	-	1/7/2019	-	Detection
August 2019 Detection Monitoring	8/2/2019	8/2/2019	8/2/2019	8/6/2019	8/5/2019	8/5/2019	8/5/2019	8/5/2019	8/6/2019	8/6/2019	8/9/2019	Detection
October 2019 Verification Sampling	-	-	-	-	-	10/2/2019	-	-	10/1/2019	-	-	Detection
November 2019 Detection Monitoring	11/13/2019	11/13/2019	11/15/2019	11/15/2019	11/15/2019	11/15/2019	11/15/2019	11/15/2019	11/15/2019	11/15/2019	11/15/2019	Detection
Total Number of Samples Collected	2	2	2	3	3	4	2	2	3	3	2	NA

Notes:

- 1.) Detection Monitoring Events tested for Appendix III Parameters.
- 2.) Verification Sampling Events tested for Appendix III Parameters with initial exceedances that have not already been verified.
- 3.) "-" No sample collected.
- 4.) NA - Not applicable.

### 3.1 Detection Monitoring Program

A Detection Monitoring event was completed November 12-16, 2018. Verification Sampling and the Statistical Analysis to evaluate for Statistically Significant Increases (SSIs) for the November 2018 event were not completed

until 2019 and are, therefore, included in this report. Detections of Appendix III analytes triggered a verification sampling event, which was completed on January 7, 2019 and verified SSIs. **Table 2** summarizes the results of the statistical analysis of the November 2018 Detection Monitoring event and laboratory analytical data are provided in **Appendix A**.

As outlined in section 257.94(e)(2) of the CCR Rule, the owner or operator may demonstrate that a source other than the CCR Unit has caused an SSI and that the apparent SSI was the result of an alternative source or resulted from errors in sampling, analysis, statistical evaluation, or natural variation in groundwater quality. An Alternative Source Demonstration (ASD) was completed for these SSIs and is provided in **Appendix B**. This ASD demonstrates that the SSIs are not caused by the SCPB CCR Unit and the SCPB CCR Unit remains in Detection Monitoring.

A Detection Monitoring Event was Scheduled for May 2019, however due to flooding the event was completed August 2-9, 2019, and testing was completed for all Appendix III analytes. Statistical analysis of the data determined that there were SSIs. **Table 3** summarizes the results of the statistical analysis of the August 2019 Detection Monitoring event and laboratory analytical data are provided in **Appendix A**. As with the November 2018 sampling event, SSIs in the monitoring well network are not caused by the SCPB CCR Unit and an ASD for this is provided in **Appendix C**.

As outlined in the Statistical Analysis Plan for this site, updates to the statistical limits are completed once four (4) to eight (8) new sample results are available. During the statistical analysis of the August 2019 sampling event, the statistical limits used to determine an SSI were updated according to the Statistical Analysis Plan.

A Detection Monitoring event was completed November 13-15, 2019, and testing was performed for all Appendix III analytes. Statistical analyses to evaluate for SSIs in the November 2019 data were not completed in 2019 and the results will be provided in the 2020 Annual Report. **Table 4** summarizes the results of the November 2019 Detection Monitoring event and laboratory analytical data are provided in **Appendix A**.

### **3.2 Groundwater Elevation, Flow Rate and Direction**

To meet the requirements of §257.93(c), water level measurements were taken at all monitoring wells prior to the start of groundwater purging and sampling. Static water levels were measured within a 24-hour period in each monitoring well using an electronic water level indicator.

Groundwater elevations were used to generate potentiometric surface maps found in **Appendix D**. As shown on the potentiometric surface maps, groundwater flow direction within the uppermost aquifer is dynamic and influenced by seasonal changes in the water level in the adjacent Mississippi and Missouri Rivers, since the alluvial aquifer is hydraulically connected to these water bodies. Groundwater in the alluvial aquifer will generally flow from the higher of the two rivers toward the lower elevation river. The SCPA Surface Impoundment and Poeling Lake also locally affect water levels and flow directions. Water flows into and out of the alluvial aquifer as a result of fluctuating river water levels that produce “bank recharge” and “bank discharge” conditions. At this facility, groundwater can flow north and south toward the Mississippi and Missouri Rivers, depending on river levels.

Groundwater flow direction and hydraulic gradient were estimated for the alluvial aquifer wells at the SEC using commercially available software. Results from this assessment indicate that while groundwater flow direction is variable, the overall net groundwater flow at the SEC was toward the northeast but ranged from north to south.

Horizontal gradients calculated by the program range from 0.0001 to 0.001 feet/foot with an estimated net annual groundwater velocity of approximately 4 feet per year.

## **4.0 STATUS OF THE GROUNDWATER MONITORING PROGRAM**

The SCPB remains in Detection Monitoring. Section 5.0 provides a discussion of the activities planned for 2020.

### **4.1 Sampling Issues**

Detection monitoring for the SEC was planned for May 2019. However, from approximately March to July 2019, some of the monitoring wells at the SEC were under water due to the flooding of the Mississippi and Missouri Rivers. This caused a delay in the planned sampling dates for the SCPB. On July 15-17, 2019, Golder performed post-flood monitoring well inspections at the SEC and found that at the SCPB only BMW-1S and BMW-3S had been impacted by the flood. On July 23, 2019, these monitoring wells were re-developed to remove floodwater impacts to the well prior to any future groundwater elevation measurements or groundwater samples being collected. After successful re-development, BMW-1S and BMW-3S were returned to service.

No other notable sampling issues were encountered in 2019.

## **5.0 ACTIVITIES PLANNED FOR 2020**

Detection Monitoring is scheduled to continue on a semi-annual basis in the second and fourth quarters of 2020. Statistical analysis of the November 2019 Detection Monitoring data will be completed in 2020 and included in the 2020 Annual Report.

RE: Project: SCPB GW SAMPLING  
Pace Project No.: 60291374

Dear Jeffrey Ingram:

Enclosed are the analytical results for sample(s) received by the laboratory on January 09, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

REV-1, 1/22/20: Sample IDs corrected.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: SCPB GW SAMPLING  
Pace Project No.: 60291374

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### LABORATORIES

PASI-K Pace Analytical Services - Kansas City

### ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

## MEMORANDUM

**DATE** January 10, 2019

**Project No.** 1531406

**TO** Project File  
Golder Associates

**CC**

**FROM** Tommy Goodwin

**EMAIL** [tgoodwin@golder.com](mailto:tgoodwin@golder.com)

### **DATA VALIDATION SUMMARY: AMEREN – SIOUX ENERGY CENTER – VERIFICATION SAMPLING – DATA PACKAGE 60291374**

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When analytes exceeded the recovery criteria for MS/MSD of a sample, the sample result was not qualified on MS/MSD data alone.
- When a compound was detected in a sample result between the MDL and the PQL the results were recorded at the detection value and qualified as estimates (J).
- When a sample or field duplicate RPD was not met, associated samples were qualified as estimates (J). If the results were less than the MDL (MDC for radionuclide analysis) or detected in a blank below the PQL the results were qualified as non-detects and estimates (UJ).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Golder Associates  
 Project Name: Ameren - SLPB - VS - Jan 2019  
 Reviewer: T Goodwin

Project Manager: J Ingram  
 Project Number: 1531406  
 Validation Date: 1/10/19

Laboratory: Pace Analytical

Analytical Method (type and no.): Metals (200.73200.8), Hg (7470), Alk (SM 2320E), TDS (SM 2540C), Fe (SM 3500-Fe B14), Anions (300.0), P (365.4), Ra (903.1&904.0)

Matrix:  Air  Soil/Sed.  Water  Waste

Sample Names S-LMW-2S, S-LMW-3S, S-LMW-4S, S-FB-1, S-DUP-1, S-LMW-8S

SDG #: 60291374

**NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).**

Ballwin, MO 63021

RE: Project: AMEREN SIOUX ENERGY CTR  
Pace Project No.: 60310790

Dear Jeffrey Ingram:

Enclosed are the analytical results for sample(s) received by the laboratory between August 03, 2019 and August 10, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: AMEREN SIOUX ENERGY CTR  
Pace Project No.: 60310790

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### LABORATORIES

PASI-K Pace Analytical Services - Kansas City

### ANALYTE QUALIFIERS

- B Analyte was detected in the associated method blank.
- E Analyte concentration exceeded the calibration range. The reported result is estimated.
- H1 Analysis conducted outside the EPA method holding time.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

### DATA VALIDATION SUMMARY, SIOUX ENERGY CENTER – SCPB – DATA PACKAGE 60310790A

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was detected in a sample result between the MDL and the PQL the results were recorded at the detection value and qualified as estimates (J).
- When a compound was detected in a blank (i.e. method, field), and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
- When a duplicate comparison criterion was not met, associated sample detections were qualified as estimates (J).
- When matrix spike/matrix spike duplicate (MS/MSD) criterion was not met, the associated sample result was qualified as an estimate (J).

RE: Project: AMEREN SIOUX ENERGY CTR SCPB  
Pace Project No.: 60316739

Dear Jeffrey Ingram:

Enclosed are the analytical results for sample(s) received by the laboratory on October 02, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: AMEREN SIOUX ENERGY CTR SCPB  
Pace Project No.: 60316739

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### LABORATORIES

PASI-K Pace Analytical Services - Kansas City

### ANALYTE QUALIFIERS

- E Analyte concentration exceeded the calibration range. The reported result is estimated.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- R1 RPD value was outside control limits.

RE: Project: AMEREN SIOUX ENERGY CTR SCPB  
Pace Project No.: 60317026

Dear Jeffrey Ingram:

Enclosed are the analytical results for sample(s) received by the laboratory on October 04, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: AMEREN SIOUX ENERGY CTR SCPB  
Pace Project No.: 60317026

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### LABORATORIES

PASI-K Pace Analytical Services - Kansas City

### ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

### **DATA VALIDATION SUMMARY, SIOUX ENERGY CENTER – SCPB - DATA PACKAGE 60317026**

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When MS/MSD recovery exceeded the QC limits, the associated sample result was qualified as an estimate (J).

## QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: Golder Associates  
 Project Name: Ameren - Sioux - SCPB  
 Reviewer: T Goodwin

Project Manager: J Ingram  
 Project Number: 153140601  
 Validation Date: 1/8/2020

Laboratory: Pace Analytical - KS  
 Analytical Method (type and no.): SM 2540C (TDS); EPA 300.0 (Anions)  
 Matrix:  Air  Soil/Sed.  Water  Waste   
 Sample Names S-LMW-4S, S-LMW-DUP-1

SDG #: 60317026

**NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).**

RE: Project: AMEREN SIOUX ENERGY CTR SCPB  
Pace Project No.: 60321513

Dear Jeffrey Ingram:

Enclosed are the analytical results for sample(s) received by the laboratory on November 16, 2019. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jamie Church

## QUALIFIERS

Project: AMEREN SIOUX ENERGY CTR SCPB  
Pace Project No.: 60321513

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### LABORATORIES

PASI-K Pace Analytical Services - Kansas City

### ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.  
M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

### **DATA VALIDATION SUMMARY, SIOUX ENERGY CENTER – SCPB – DATA PACKAGE 60321513**

The following is a summary of instances where quality control criteria in the functional guidelines were not met and data qualification was required:

- When a compound was detected in a sample result between the MDL and the PQL the results were recorded at the detection value and qualified as estimates (J).
- When a compound was detected in a blank (i.e. method, field) and the blank comparison criterion was not met, associated sample results were qualified as estimates (J) or non-detects (U).
- When MS/MSD recovery exceeded the QC limits, the associated sample result was qualified as an estimate (J).

### SCPB – ALTERNATIVE SOURCE DEMONSTRATION – NOVEMBER 2018 SAMPLING EVENT

#### 1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule (CCR Rule or The Rule), Golder Associates Inc. ("Golder") has prepared this Technical Memorandum that indicates Statistically Significant Increases (SSIs) calculated at Ameren Missouri's (Ameren) Sioux Energy Center (SEC), fly ash surface impoundment (SCPB) result from an alternative source. This SCPB Alternative Source Demonstration (ASD) satisfies the requirements of §257.94(e)(2) which allows the owner or operator to demonstrate that a source other than the CCR Unit has caused an SSI and that the apparent SSI was the result of an alternative source or resulted from errors in sampling, analysis, statistical evaluation, or natural variation in groundwater quality.

#### 2.0 BACKGROUND

In November 2017, the first round of detection monitoring was completed at the SEC's SCPB Coal Combustion Residual (CCR) Unit in St. Charles County, Missouri. This sampling was completed in accordance with the CCR Rule and SSIs were identified and verified. In February/March 2018, additional drilling and a detailed analysis of results were completed for the SCPB and it was determined that the SSIs in the CCR Rule groundwater monitoring wells at the SCPB were not caused by impacts from the SCPB. The SSIs observed in SCPB wells were caused by an alternative source, which is the unlined, adjacent SCPA surface impoundment. A copy of the ASD report for the November 2017 sampling event is provided in Appendix B of the 2018 SCPB Annual Groundwater Monitoring and Corrective Action Report.

#### 3.0 NOVEMBER 2018 SAMPLING EVENT

A summary of the November 2018 sampling results can be found in Table 1 of this Technical Memorandum. Figure 1 of this Technical Memorandum displays where November 2018 SCPB CCR Rule groundwater monitoring well samples plot in comparison to cations/anions for the SCPA pore-water, SCPB pore-water, and background groundwater zones. As displayed in this figure, the monitoring wells around the SCPB plot in similar locations to those from November 2017. These results also display that monitoring wells that have SSIs in the November 2018 sampling event plot between the background groundwater quality and the SCPA pore-water. Like the November 2017 Sampling Event ASD, results from this diagram demonstrate that groundwater data from the monitoring wells around the SCPB are impacted by the SCPA and not the SCPB.

Additional supporting lines of evidence from the November 2017 Sampling Event ASD are also applicable in this November 2018 Sampling Event ASD. Additional evidence includes:

- Potentiometric surface mapping from 2018 continues to show that while groundwater conditions can be variable, net groundwater flow around the SCPB is toward the east/southeast, flowing from the SCPA toward the SCPB. This supports the conclusion that the unlined SCPA is the source of impacts at the downgradient monitoring wells because impacted monitoring wells around the SCPB are frequently downgradient from the SCPA.
- The SCPB was constructed with an engineered liner system consisting of a 60-mil High Density Polyethylene (HDPE) geomembrane liner with a bottom elevation of approximately 419 FT MSL at its lowest point. The low permeability HDPE liner system in the SCPB is a barrier to CCR impact migration and provides containment for CCR.
- The SCPA began operation in 1967 and has a bottom elevation estimated to be approximately 370 FT MSL. In addition to the different pore-water fingerprints, there are elevated concentrations of CCR impact indicators in the intermediate and deep zones of groundwater in the alluvial aquifer as shown in the SCPA Annual report. Since impacts are present in the shallow, middle, and deep alluvial zones and are not isolated to the shallow zone where SCPB impacts would most readily occur, the impacts are most likely from the SCPA, which extends to deeper depths in the aquifer.

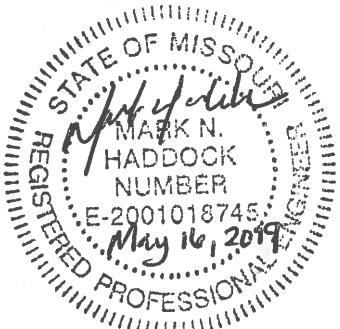

In summary, groundwater chemistry, pore-water chemistry fingerprints, cell construction and hydrogeological evidence all demonstrate that impacts (SSIs) calculated during the November 2018 Sampling Event for the SCPB CCR Unit were not caused by impacts from the SCPB surface impoundment, and the SCPA surface impoundment is the source of the SCPB SSIs.

## CERTIFICATION STATEMENT

This *SCPB – Alternative Source Demonstration – November 2018 Sampling Event* has been prepared to comply with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule under the direction of a licensed professional engineer with Golder Associates Inc.

I hereby certify that this *SCPB – Alternative Source Demonstration – November 2018 Sampling Event* located at 8501 Missouri 94, West Alton, Missouri 63386 has been prepared to meet the requirements of 40 CFR §257.94(e)(2).

### SCPB – ALTERNATIVE SOURCE DEMONSTRATION – AUGUST 2019 SAMPLING EVENT

#### 1.0 INTRODUCTION

In accordance with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule (CCR Rule or The Rule), Golder Associates Inc. ("Golder") has prepared this Technical Memorandum that indicates Statistically Significant Increases (SSIs) calculated at Ameren Missouri's (Ameren) Sioux Energy Center (SEC), fly ash surface impoundment (SCPB) result from an alternative source. This SCPB Alternative Source Demonstration (ASD) satisfies the requirements of §257.94(e)(2) which allows the owner or operator to demonstrate that a source other than the CCR Unit has caused an SSI and that the apparent SSI was the result of an alternative source or resulted from errors in sampling, analysis, statistical evaluation, or natural variation in groundwater quality.

#### 2.0 BACKGROUND

In November 2017, the first round of detection monitoring was completed at the SEC's SCPB Coal Combustion Residual (CCR) Unit in St. Charles County, Missouri. This sampling was completed in accordance with the CCR Rule and SSIs were identified and verified. In February/March 2018, additional drilling and a detailed analysis of results were completed for the SCPB and it was determined that the SSIs in the CCR Rule groundwater monitoring wells at the SCPB were not caused by impacts from the SCPB. The SSIs observed in SCPB wells were caused by an alternative source, which is the adjacent SCPA surface impoundment. A copy of the ASD report for the November 2017 sampling event is provided in Appendix B of the 2018 SCPB Annual Groundwater Monitoring and Corrective Action Report.

#### 3.0 AUGUST 2019 SAMPLING EVENT

A summary of the August 2019 sampling results can be found in **Table 1. Figure 1** of this Technical Memorandum displays where August 2019 SCPB CCR Rule groundwater monitoring well samples plot in comparison to cations/anions for the SCPA pore-water, SCPB pore-water, and background groundwater zones. As displayed in this figure, the monitoring wells around the SCPB plot in similar locations to those from 2017 and wells in the August 2019 sampling event plot between the background groundwater quality and the SCPA pore-water zones. Like the November 2017 Sampling Event ASD, results from this diagram demonstrate that groundwater quality in the monitoring wells around the SCPB is impacted by the SCPA and not the SCPB.

Additional supporting lines of evidence from the November 2017 Sampling Event ASD are also applicable in this August 2019 Sampling Event ASD. Summaries of supporting lines of evidence include:

- Potentiometric surface mapping from 2018 and 2019 continue to show that while groundwater conditions can be variable, net groundwater flow around the SCPB is toward the northeast, flowing from the SCPA toward the SCPB. This supports the conclusion that the unlined SCPA is the source of impacts at the downgradient monitoring wells because impacted monitoring wells around the SCPB are frequently downgradient from the SCPA.
- The SCPB was constructed with an engineered liner system consisting of a 60-mil High Density Polyethylene (HDPE) geomembrane liner with a bottom elevation of approximately 419 feet above mean sea level (FT MSL) at its lowest point. The SCPA began operation in 1967 and has a bottom elevation estimated to be at approximately 370 FT MSL. Additionally, as shown in the SCPA Annual Report, there are elevated concentrations of CCR indicators in the intermediate and deep zones of the alluvial aquifer. Since impacts are present in the shallow, middle, and deep alluvial zones and are not isolated to the shallow zone, the impacts are most likely from the SCPA, which extends to deeper depths in the aquifer.

In summary, groundwater chemistry, pore-water chemistry fingerprints, cell construction and hydrogeological evidence all demonstrate that impacts (SSIs) calculated during the August 2019 Sampling Event for the SCPB CCR Unit were not caused by impacts from the SCPB surface impoundment, and the SCPA surface impoundment is the source of the SCPB SSIs.

## CERTIFICATION STATEMENT

This SCPB – Alternative Source Demonstration – August 2019 Sampling Event has been prepared to comply with the United States Environmental Protection Agency (EPA) coal combustion residual (CCR) rule under the direction of a licensed professional engineer with Golder Associates Inc.

I hereby certify that this SCPB – Alternative Source Demonstration – August 2019 Sampling Event located at 8501 Missouri 94, West Alton, Missouri 63386 has been prepared to meet the requirements of 40 CFR §257.94(e)(2).

**GOLDER ASSOCIATES INC.**

NOTES:

- Unit Abbreviations: µg/L - micrograms per liter, mg/L - milligrams per liter, SU - standard units.
- J - Result is an estimated value.
- ND - Constituent was analyzed for, but was not detected above the Method Detection Limit (MDL) and is considered a non-detect. Values displayed as ND.
- NA - Not applicable.
- Prediction Limits calculated using Sanitas Software.
- If all background values are less than the Practical Quantitation Limit (PQL) then the Double Quantification Rule (DQR) is used.
- Values highlighted in yellow indicate a Statistically Significant Increase (SSI).
- Values highlighted in green indicate an initial exceedance above the prediction limit that was not confirmed by Verification Sampling (not an SSI).
- Only analytes/wells that were detected above the prediction limit and that had not already been verified were tested during Verification Sampling.
