Acceptance of the Proposed Taylorville Groundwater Study

Dear Mr. Martin:

Illinois Environmental Protection Agency (Illinois EPA) and the United States Environmental Protection Agency (US EPA) have reviewed the *Revised Groundwater Flow and Transport Modeling Assessment Report* (Modeling Report) for the former Taylorville MGP site located in Taylorville, IL. The Report is dated May 5, 2026, and was received electronically by Illinois EPA on the same date. Illinois EPA concurs with the recommendation of the report and concurs with the request to cease groundwater treatment system (GWTS) operation to assess non-pumping conditions of the groundwater aquifer at the Site for the remainder of 2026 through the end of 2028.

During the proposed timeframe the GWTS will be idled in place, Ameren will continue quarterly groundwater monitoring. Groundwater reports will be prepared and submitted to Illinois EPA and US EPA. Potential downgradient groundwater impacts, if any, will be immediately verified by resampling. Variations in groundwater conditions will be identified and reported and may trigger additional action including resuming operation of the idled GWTS. The efficacy of the GWTS can then be evaluated during the next Five-Year Review in June 2029.

If you have any questions, then please contact me at Greggory.miller@illinois.gov or at (217) 782-9869.

Sincerely,

Greggory Miller
