

# Preliminary Route Alternatives Map

The map below shows Preliminary Route Alternatives for the Project. Using routing criteria and comments collected from the community, we will narrow down the number of Preliminary Route Alternatives and present them again to the community at the third round of open houses in November. Finally, using the data and input collected on the remaining routes, our team will select a "Primary Route" and an "Alternate Route" for the Illinois Valley Reliability Project to present in the application to the ICC. Please visit the interactive map on the project website to view the map in more detail.

Disclaimer: This high-level map depicts Preliminary Route Alternatives as 500-foot wide corridors. The requested easement width for the transmission line will be 150 feet. The information provided on this map is for discussion purposes only. Ameren Transmission Company of Illinois (ATXI) is not bound in any way to the representations reflected on this map. This map does not represent a final determination by ATXI as to route selection, and ATXI is not restricted or barred from modifying or deviating from the routes proposed, or considering new or different routes. ICC Staff or other parties may also propose new or modified routes. All routes are subject to change pending ICC approval.
