

SECURITY EXPECTATIONS

WELCOME & KEY PRINCIPLES

Welcome to Callaway Energy Center. Your expertise is vital to the safe and reliable operation of our nuclear facility. To maintain the highest standards of safety and security, all visitors and contractors must follow site access rules and security procedures without exception.

Respect the process

Security checks, badge control, and access protocols are mandatory.

Safety first

Prohibited items and contraband are never allowed inside the Protected Area (PA).

Professional conduct

Follow instructions from Security personnel at all times.

SECURITY DOORS

Security doors protect PA and Vital Areas.

- Badge and biometric required
- **No tailgating**—each person must badge in
- Wait for door to secure before proceeding
- Report malfunctions immediately

Non-compliance consequences: Condition reports, investigations, and possible badge suspension.

CONTRABAND & PROHIBITED ITEMS

Contraband (NRC-defined):

- Unauthorized firearms, explosives, incendiaries
- Dangerous materials capable of sabotage (e.g., weapons, disease-causing agents)

Prohibited Items:

- Illegal drugs, alcohol
- Chemical/biological incapacitating agents (pepper spray, mace, tear gas)
- Ammunition and shell casings

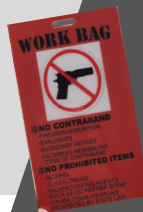

Self-Check: Inspect personal items before arriving at Callaway.

BAG TAG PROGRAM

Bag Tags help prevent accidental introduction of restricted items.

- **Separate work/personal items**
- **Visual reminder** before screening
- **Reduce risk** of delays or loss of access

Available at the Main Access Visitor window

BADGE RETENTION

Your badge is your authorization to enter the PA. Losing it inside the PA is an NRC recordable event.

- Wear badge on outermost garment
- Maintain positive control—never leave it unattended
- Use secure attachment (lanyard/clip)
