

INVESTING IN BOWLING GREEN AND PIKE COUNTY

The Bowling Green Renewable Energy Center is set to become an economic and energy engine for Pike County.

Ameren Missouri and its predecessors have been part of the community for decades, and our track record demonstrates our commitment to Bowling Green and Pike County. Working together with neighbors and others across the county, we can realize the long-term benefits that solar generation can bring to the community.

Strengthening the community

- Energy delivered to the immediate area.
- Provides the energy needs for about 10,000 homes a year.
- Least-cost new generation, helping rates stay affordable.
- Significant local investment in constructing and maintaining the facility, utilizing local resources whenever possible and feasible.

Location

The project site is on 440 acres of Ameren Missouri-owned land.

Proposed Project Schedule

Late 2024: Start of approximately 15-month construction period.

Early 2026: Targeted date to generate energy for the community.
