

## PREPARING DOWNTOWN ST. LOUIS FOR A SMARTER ENERGY GRID

We value you as a customer and want to keep you informed about the work we're doing to upgrade energy service in your community. As part of **Ameren Missouri's Smart Energy Plan**, we are upgrading underground infrastructure to improve the power quality and energy reliability you count on every day. We are replacing aging infrastructure, setting the stage for future upgrades and preparing for growth in downtown St. Louis.

### Key facts about the Ameren Missouri plan:

- At the start of the New Year, we will begin a multi-phase infrastructure revitalization project.
- The first phase of the project occurs from January to April 2019.
- Phase 1 includes upgrades in eastern portions of downtown. Please see the map to the right for details.
- Future phases of the upgrades will occur through 2020, and details of those plans will be announced as the project progresses.
- To ease high volume traffic, we will reduce construction during the busy spring and summer months. However, our crews will perform maintenance during that timeframe when required.

**Ameren Missouri is working** with organizations in the downtown area to help keep you informed about construction activities. While we understand underground work can be disruptive, our goal is to work as efficiently as possible to improve service reliability downtown. Thank you for your patience.
