Application Advice

Version 2.1

Summary of Changes

January 6, 2009 Version 1.0

October 24, 2009 Version 1.1

> May 31, 2013 Version 2.0

June 28, 2023 Version 2.1 Initial Release.

- Change Control 007 Added Rejection Reason Codes ABN (Duplicate) and DDM (Dates Do Not Match) to the TED02.
- Change Control #040 Added requirements for Ameren Gas
- Change Control #054 Added code NA to the BGN08.

Implementation Notes

Uses for the 824 Application Advice

- The 824 Application Advice Implementation Guideline will be used for the following circumstances:
 - o Rejection for Cause
 - RES/GS Rejects 867 Usage transaction
 - RES/GS or Utility Rejects 810 Invoice
 - RES/GS Rejects 820 UCB Remittance Advice (single account or entire transaction)
 - RES/GS Charges Disputed Utility Rejects Bill Ready or Rate Ready 810
 - Notification of No Current RES/GS Charges When the bill window closes, and the Utility has not processed an 810 Bill Ready Invoice for the current period, the Utility will notify the RES/GS that No Current RES/GS Charges were included on customer's bill.
 - Confirmation of RES/GS Charges Billed When the Utility bills the customer, and RES/GS charges are included, the Utility will provide details to the RES/GS for each 810 Bill Ready Invoice that was included on the customer's bill. The Utility will also send this transaction to confirm RES/GS charges cancelled.

Timing

- An 824 Rejection for Cause must be sent within 1 business day of receipt of the offending transaction except for Disputed Charges. In the case of a rejection of the 867, the utility is not expected to extend the bill window if the 824 is not received within this timeframe.
- An 824 Rejection for Disputed Charges may occur at any time within the rules surrounding disputed charges.
- An 824 Notification of No Current RES/GS Charges or 824 Confirmation of RES/GS Charges Billed will be sent the same day the bill is sent to the customer.

Cross Reference between 867, 810, 820

- CPWG has established a Cross Reference Number to tie together the 867, 810 and 820 transactions, where appropriate. All three variations of the 824 Application Advice will include the Cross Reference Number.
 - o The 867 initiates the Cross Reference Number in the BPT02 field
 - The Cross Reference Number then appears in the 810 Invoice (Bill Ready and Rate Ready) in the BIG05.
 - o The Cross Reference Number is finally provided in the 820 Remittance transaction in the REF*6O segment only for Purchase of Receivables.

Action Code

- The Action Code in BGN08 will indicate what action is expected to take place, if any.
 - When BGN08=82, the sender is expecting the receiver to correct and resend the offending transaction, or otherwise respond to the sender with information necessary to process the transaction. This code will be used for both a Rejection for Cause and a Notification of No Current RES/GS Charges.
 - O When BGN08=EV, the sender is indicating that This indicates that the receiver of the 824 should evaluate the problem and make modifications to their system as necessary without resending the transaction. This code should be used when it is not possible to correct the situation automatically or it is not desirable to do so (such as when

- receiver chooses to make minor corrections because that is the easiest or quickest solution). It is imperative that the original transaction **not** be resent without notification as the data has already been processed.
- When BGN08=CF, the Utility is confirming that the Utility Bill Ready charges were included on the customer's bill. No action necessary.

Rejection of 820 UCB Remittance Advice

- Because the funds have already been transferred, a rejection of an 820 UCB Remittance Advice transaction will always be coded as "Evaluate" (BGN08 = EV). The Utility and RES/GS must work together to determine how to resolve the issue.
- The 820 may be rejected as a whole (OTI01=TR) for reasons such as the sum of the details does not equal the total. The 824 may also be used to notify the utility of issues with individual accounts within the 820 transaction (OTI01=TP).

Rejection of 867 Usage – Change of Bill Window

• In the event that the 867 Usage transaction is rejected for cause, and the utility agrees that they made an error, the utility must resend the transaction with a new Document Due Date.

RES/GS Charges Disputed

• An 824 Application Advice may be sent by the Utility to notify the RES/GS that charges are in dispute and that the Utility will be sending an adjustment in the 820 Remittance Advice to recover the money, if already paid. This transaction is essentially a "reject" of an 810 and will be used in both the Rate Ready and Bill Ready situations.

Implementation of Service Point (Ameren)

- Ameren Mass Market and Non-Mass Market:
 - Ameren to RES/GS: The Service Point Identifier will be sent in REF*LU.
 - RES/GS to Ameren: The Service Point Identifier may optionally be sent in REF*LU.

One Commodity per Transaction

• Each submitted transaction may be valid for only one commodity (i.e., electric or gas).

824 Application Advice

Functional Group ID=AG

Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the Application Advice Transaction Set (824) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide the ability to report the results of an application system's data content edits of transaction sets. The results of editing transaction sets can be reported at the functional group and transaction set level, in either coded or free-form format. It is designed to accommodate the business need of reporting the acceptance, rejection or acceptance with change of any transaction set. The Application Advice should not be used in place of a transaction set designed as a specific response to another transaction set (e.g., purchase order acknowledgment sent in response to a purchase order).

Transaction Set Notes

- 1. The OTI loop is intended to provide a unique identification of the transaction set that is the subject of this application acknowledgment.
- 2. The REF segment allows for the provision of secondary reference identification or numbers required to uniquely identify the original transaction set. The primary reference identification or number should be provided in elements OTI02-03.
- 3. The DTM segment allows for the provision of date, time, or date and time information required to uniquely identify the original transaction set.
- **4.** The AMT segment should be utilized if monetary amount information is important to the unique identification of the original transaction set.

Segment: ST Transaction Set Header

Position: 010

Loop:

Level: Heading Usage: Mandatory

Max Use:

Purpose:

To indicate the start of a transaction set and to assign a control number

Syntax Notes: Semantic Notes:

1 The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).

Comments:

Notes: Required

DTM~814~20100115

Data Element Summary

Code specifying type of date or time, or both date and time

Payment Due Date

Used on an accept response to an 810 transaction to

indicate the customer's payment due date.

Must Use DTM02 373 Date X DT 8/8

Date expressed as CCYYMMDD

Customer's Due Date

Segment: AMT Monetary Amount (Customer Balance Due)

Position: 050

Loop: OTI Mandatory

Level: Detail
Usage: Optional
Max Use: >1

Purpose: To indicate the total monetary amount

Syntax Notes: Semantic Notes: Comments:

Notes: Rejection for Cause: Not Used

Notification of No Current RES/GS Charges: Not Used Confirmation of RES/GS Charges Billed: Required

The amount is the total amount charged to the customer for the associated 810 Invoice which is identified by Invoice Number in the OTI03 and Cross Reference Number in the

REF*6O.

AMT~BD~178.99

Data Element Summary

Monetary amount

RES/GS Charges Billed - The amount in AMT02 must be signed if negative.

 $\boldsymbol{TED} \ \ \textbf{Technical Error Description}$ **Segment:**

Position: 070

> Loop: **TED** Optional

Level: Detail Usage: Optional Max Use:

Purpose: Syntax Notes: To identify the error and, if feasible, the erroneous segment, or data element, or both

Semantic Notes:

Comments: If used, TED02 will contain a generic description of the data in error (e.g., part

number, date, reference number, etc.).

Notes: Rejection for Cause: Required

Notification of No Current RES/GS Charges: Required - TED02 will equal "NCC"

Confirmation of RES/GS Charges Billed: Not Used

Multiple TED loops may be provided to include multiple reasons.

| | | | Code Valid for Rejection of 810 Bill Ready | | | | | |
| | | | | This as do soill be used by ComEd sub- | A | | | |

This code will be used by ComEd only. Ameren does

not perform date validation on the 810.

DIS RES/GS Charges in Dispute

Code Valid from Utility to RES Only

Used when the Utility is essentially canceling the 810 RES/GS Charges by sending a rejection of the 810 and subsequently adjusting the associated funds via the 820 transaction. This "rejection" of an 810 re-opens the associated 867 so that when the dispute is resolved, the RES/GS may send a new 810 to include the appropriate

charges on the bill.

EXP Expired

Code Valid for Rejection of 810 Bill Ready Only 810 Received for billing period older than that

supported by the Billing System

FRF Bill Type Mismatch

Code Valid for Rejection of 810 Bill Ready Only An 810 is received for an account that is not on Bill

Ready Utility Consolidated Billing.

ISP Invalid Service Point

NCC No Current Charges on Customer Bill

Used only for Notification of No Current RES/GS

Charges

OBW Outside Bill Window

Code Valid for Rejection of 810 Bill Ready Only
The 810 was received outside of the billing window.

SUM Sum of the Details does not Match the Total

Code Valid for Rejection of 810 Rate Ready and 820

UND Cannot Identify Service Provider

Code Valid for Rejection of 810 Bill Ready Only

DUNS or DUNS+4 Not Valid

Segment: NTE Note/Special Instruction

Position: 080

Loop: TED Optional

Level: Detail
Usage: Optional
Max Use: 100

Purpose: To transmit information in a free-form format, if necessary, for comment or special

instruction

Syntax Notes: Semantic Notes:

Comments: 1 The NTE segment permits free-form information/data which, under ANSI X12

standard implementations, is not machine processable. The use of the NTE segment $\,$

should therefore be avoided, if at all possible, in an automated environment.

Notes: Rejection for Cause: Required

Notification of No Current RES/GS Charges: Required Confirmation of RES/GS Charges Billed: Not Used NTE~ADD~MISSING ALL PTD LOOPS
